Stop Feeding Your Family Poison! Have You Ever Peeled a Beautiful Orange and Found the Inside Dry and Tasteless? Are You Tired of Supermarket Recalls On Bad Fruits and Vegetables? Do You Wish For Fresh, Healthy Fruits and Vegetables to Feed Your Children? Finally, Learn How to Protect Your Family's Health and Serve Crisp, Colorful and SAFE Fruits and Vegetables By Growing Your Own Organically! No parent would knowingly feed their children poison. Sadly, that's exactly what is happening every day. Even the most caring and conscientious parent can't fight what they don't see. And yet, that's what happens each time you place a meal on your table. The vegetables appear attractive, colorful and may even taste okay. However, it's what is inside that is harmful. Yes, we live in a wonderful age. Life has grown much easier for us with supermarkets, microwave ovens and instant foods. However, all of this -convenience- carries a pretty hefty price. Think about it for just a moment and see if you can add to these: -Soil additives to increase yield per acre -Hybrid seeds that produce more visually appealing vegetables -Insecticides that chase away pests And, think about it for just a moment - these are vegetables and fruits that are grown in the U.S. with the benefit of government oversight. What about all the imported produce? The FDA will tell you that imported produce is regulated. If that's the case, then why were we afraid to eat tomatoes and chili peppers in the spring and summer of 2008 because of contamination. We love getting things like berries, melons, fresh corn and cucumbers when there's three feet of snow on the ground. A hundred years ago such a thing was unheard of. Again, what's the price? Exploring The Options Frozen fruits and vegetables are one option. But remember, these are just the same produce. The difference is they are flash frozen. The same thing is true of canned foods. In fact, these are even more detrimental because of the additional processing they undergo. Dehydrating is another option. In fact dehydrated foods can be delicious when re-hydrated. The problem? You're still beginning with the very same food that has a suspicious beginning. There is one option left. And, it's the only option that will guarantee the foods are fresh and free of poisons and other harmful additives. What's The Answer? Grow your own and do it organically! It's not as difficult as you might think. The only way that you can guarantee that your family is protected from environmental pollutants in their fruits and vegetables is to grow them yourself. But, not just any method will do. To be truly safe, organic gardening is the answer and we have the roadmap for you to follow. -Gardening Organically- is written with you in mind. Organic Gardening

Typically, vegetable gardening is about the long view: peas sown in spring aren't harvested until summer, and tomatoes started indoors in February can't be eaten until July. But it's not true for all plants. Some things can be planted and eaten in weeks, days, even hours. The *Speedy Vegetable Garden* highlights more than 50 quick crops, with complete information on how to sow, grow, and harvest each plant, and sumptuous photography that provides inspiration and a visual guide for when to harvest. In addition to instructions for growing, it also provides recipes that highlight each crop's unique flavor, like Chickpea sprout hummus, stuffed tempura zucchini flowers, and a paella featuring calendula. Sprouted seeds are the fastest. Microgreens can be harvested in weeks: cilantro, 14 days after planting; arugula and fennel in 10 days. And a handful of vegetable varieties grow more quickly than their slower relatives, like dwarf French beans (60 days), cherry tomatoes (65 days), and early potatoes (75 days). The *Speedy Vegetable Garden* puts fresh, seed-to-table food at your fingertips, fast!
