

Target Rich Environment

[#Target Rich Environment](#) [#Market Opportunity](#) [#Business Growth](#) [#High Potential Leads](#) [#Strategic Targeting](#)

A Target Rich Environment (TRE) signifies a situation abundant with potential prospects, customers, or opportunities. It's a scenario where finding leads and converting them into successful outcomes is significantly easier due to the sheer volume of available targets. This environment offers businesses a prime opportunity for rapid growth and increased profitability through focused strategic targeting and efficient resource allocation.

The archive includes lecture notes from various fields such as science, business, and technology.

Thank you for stopping by our website.

We are glad to provide the document Understanding Target Rich Environment you are looking for.

Free access is available to make it convenient for you.

The Blueprint for Government Contracting Success - The Blueprint for Government Contracting Success by Eric Coffie 833 views 23 hours ago 1 hour, 6 minutes - In today's episode, we had the privilege of sitting down with Solution Engineer Peter Lierni, a seasoned professional with over two ...

Introduction and overview of solution engineering.

Discussion on the generational impact on companies and government.

Impact of human capital issues on acquisitions and business development.

Peter's background and interest in the federal marketplace.

Importance of thinking in government contracting.

Difference between discriminator and differentiator in competitive bids.

Importance of strengths and weaknesses identification in competitive bids.

Overview of opportunity assessment and decision-making in bidding.

Use of SWOT analysis, Porter's Five Forces, and competitor comparisons.

Description of win strategy formulation based on analysis and strengths.

Overview of Solutionary's software tool and its unique position in BD.

Benefits of collaborative use of software for small businesses in bids.

Importance of quality inputs and responsiveness in bid development.

Example of discriminator vs. differentiator in bid scenarios.

Emphasis on quality inputs and execution in contract performance.

Challenges of capturing and leveraging intellectual capital in bids.

Solutions offered by Solutionary's software for bid development.

Importance of doing the work and leveraging technology in bids.

Benefits of collaborative use and intellectual capital capture in bids.

Advantages of traceable, defensible, and explainable bid strategies.

Continuous learning and improvement in bid development processes.

Integrating software with CRMs and workflow tools

Understanding competitive advantage in bid pursuits

Translating key factors into bid requirements

Leveraging model-based systems engineering in proposals

Addressing the thinking gap in proposal creation

Framework and techniques for proposal engineering

Scaling business growth and competitive wins

Addressing customer needs and expectations

Building long-term relationships with customers

Emphasizing capture management in project success

Importance of mentoring and apprenticeships

Conclusion: Human-centric approach to business success

The Practice and Policy of Environmental Law

More than any other environmental law survey casebook, this book conveys the substantive material in real-world practice contexts, with significant chapters on permitting and rulemaking, enforcement, compliance counseling, business transactions, and private litigation. Changes made for the second edition provide a more streamlined and coordinated presentation of the major environmental laws and programs.

Wolf and Stanley on Environmental Law

Wolf and Stanley on Environmental Law provides law students, non-law students and professionals, such as Environmental Health Officers, with detailed but accessible coverage of environmental law in England and Wales.

Principles of International Environmental Law

This second edition of Philippe Sand's leading textbook on international environmental law provides a clear and authoritative introduction to the subject, revised to December 2002. It considers relevant new topics, including the Kyoto Protocol, genetically modified organisms, oil pollution, chemicals etc. and will remain the most comprehensive account of the principles and rules relating to environmental protection and the conservation of natural resources. In addition to the key material from the 1992 Rio Declaration and subsequent developments, Sands also covers topics including the legal and institutional framework, the field's historic development and standards for general application. This will continue to be an invaluable resource for both students and practitioners alike.

International Environmental Law and Policy

Environmental Law: Text, Cases, and Materials has been designed to provide students with everything they need to approach the subject with confidence. Experts in the area, the authors combine clear and insightful commentary with carefully chosen extracts from UK and international sources to offer students a well-rounded view of the subject area. Covering a broad range of topics, the authors introduce discussion on controversies and debates and encourage readers to engage in critical reflection by posing regular discussion questions throughout the text. Further reading suggestions point students towards useful resources, guiding their independent research. Online Resources This book is also accompanied by online updates collated by the authors, helping students to stay well-informed.

Environmental Law

Recent years have witnessed an increasing interest in the environment and in environmental law, trends which have been reflected in academic work. This reader considers a cross-section of socio-legal work on environmental law, tracing its development over the past twenty years. It includes work from a variety of disciplines, theoretical perspectives and from an international scholarship. It aims to give a taste of the breadth and development of socio-legal approaches to one of the most important regulatory regimes in the western industrialised world the regulation of the environment. The readings encompass various legal approaches to environmental protection, alternatives to the law, and both domestic and supra-national issues. They also consider broader themes such as the interaction of law and science and the effects of criminalizing environmental offences, and indicate areas which future research could usefully address.

A Reader in Environmental Law

Although environmental laws are rarely able to provide the simple solutions that people want from them, they are essential for the future of our planet. This book explores how legal responses are shaped in response to the problems facing the environment today, and the socio-political conflicts facing environmental legislation.

ENVIRONMENTAL LAW AND POLICY.

This is the leading Canadian text in Environmental Law, an area governed by a complex and controversial legal regime that is affected by constitutional division of jurisdiction, corporate and taxation laws, international trade law, and traditional private law doctrines such as torts and contract law.

Environmental Law

Hardbound - New, hardbound print book.

Environmental Law

The new edition of this essential text offers a comprehensive, critical and future-thinking commentary on international environmental law.

The Practice and Policy of Environmental Law

Situating the global poverty divide as an outgrowth of European imperialism, this book investigates current global divisions on environmental policy.

Principles of International Environmental Law

Philippe Sands' text on international environmental law provides a clear, authoritative introduction to the subject. This edition has been updated to include relevant new topics, including the Kyoto Protocol, genetically modified organisms, and oil pollution.

International Environmental Law and the Global South

Assessing the basic principles, structure and effectiveness of the international legal system concerning the protection of the world's natural environment, this text has been updated to take account of developments in genetically modified organisms and biotechnology.

Principles of International Environmental Law

Written by leading scholars and experts with extensive practice and teaching experience in the field, Comparative and Global Environmental Law and Policy offers a student-friendly approach to the study of a rapidly evolving and important area of law. Its multi-jurisdictional selection of judicial opinions and legal materials introduces students to the worldwide reach of environmental law. Through its substance, the book familiarizes students not only with governing and emerging legal principles but also demonstrates how legal norms are applied to specific issues and contexts, illustrating how law-on-the-books becomes law-in-action. Student understanding is reinforced by problem exercises and discussion questions. Professors and students will benefit from: A multi-jurisdictional selection of environmental law cases and regulatory materials from across the world, with many cases from the developing world

and emerging economies. Separate chapters on rapidly evolving and critical topics such as rights of nature, sustainability, corporations and private environmental governance, human rights and the environment, and climate change. Presentation of basic background principles of environmental law, institutions, and governance and their operation in international, national and subnational systems, including indigenous governance systems. Emphasis across the book on issues of institutions and governance as well as enforcement and effectiveness. Judicial opinions providing an authoritative articulation of how legal principles are applied in various systems. Numerous problem exercises and discussion questions to introduce topics and reinforce concepts and materials. Integrated perspective on the relationship of international and transnational environmental law, national environmental law, environmental norms and principles in other settings such as in private environmental governance, and governance institutions.

International Law and the Environment

This textbook provides a compelling and structured introduction to international environmental law in the Text, Cases and Materials genre. The book uses extracts from a judiciously selected range of legal instruments and case law relevant to the protection and regulation of the environment in international law, alongside commentary from the author team and questions for class discussion, to facilitate student understanding and encourage engagement in the topic. Divided into four main parts, it examines the main principles of international environmental law, the key areas of substantive environmental regulation, the implementation of environmental law and the relations between environmental law and other areas of international law. Key Features: Provides concise introductions to each topic of environmental law Discussion questions and further reading sections guide students in applying their understanding Familiarises students with the key legal materials, treaties and case law relating to international environmental law Covers a wide variety of topics, including sustainable development, protection of the marine environment, atmospheric protection and responsibility and liability for environmental damage By introducing and highlighting the most important instruments and cases of international environmental law, this textbook seeks to provide environmental law students and non-specialists with a rich and full understanding of the topic.

Comparative and Global Environmental Law and Policy

Environmental risks and harms affect certain geographic areas and populations more than others. The environmental justice movement is aimed at having the public and private sectors address this disproportionate burden of risk and exposure to pollution in minority and/or low-income communities, and for those communities to be engaged in the decision-making processes. Environmental Justice provides an overview of this defining problem and explores the growth of the environmental justice movement. It analyzes the complex mixture of environmental laws and civil rights legal theories adopted in environmental justice litigation. Teachers will have online access to the more than 100 page Teachers Manual.

International Environmental Law

C.O.OKIDI1 I welcome the opportunity to prepare a Foreword to the book on Environmental Policy and Law in Africa, edited by Kevin R. Gray and Beatrice Chaytor. It is a pleasure to do that because the book is a contribution to the cause of capacity building for development and implementation of environmental law in Africa, a goal towards which I have had an undivided focus over the last two decades. There is still some belief in and outside Africa that for developing countries in general, and Africa in particular, development and implementation of environmental law is not a priority. This belief prevails strongly in many quarters of the industrialised countries. In fact, the view is held either out of blatant ignorance or by some renegade industrialists who fail to appreciate Michael Royston's 1979 thesis that Pollution Prevention Pays.² That group, for obvious reasons, must have their correspondent counterparts in Africa to provide hope that industries rejected as derelict in the West or inoperable due to rigorous environmental regulation, can find homes to which they can escape and dump their polluting industries.

Environmental Justice

Taking stock of all the major developments in the field of international environmental law, this text explores core assumptions and concepts, basic analytical tools and key challenges.

International Environmental Law and Policy in Africa

The third edition of this major legal guide has been thoroughly revised and updated to cover recent events and important emerging issues. Additional material includes analysis of and commentary on the World Summit on Sustainable Development, ecosystem management, compliance and dispute settlement, armed conflict, and developments in the relationship of trade and the environment. Highlights include: - Concept and Scope of the "Environment" and "Environmental Law" -The Necessity of International Law - Foundations of International Environmental Law - Origin and Evolution of International Environmental Law - Sources of International Environmental Law - Institutions and Civil Society - International Common Law and Principles - Implementing International Environmental Law - Compliance and Dispute Settlement - Protection of Living Organisms - Fresh Waters -The Marine Environment -Atmosphere, Stratosphere and Climate -Regulating Threats to the Environment Published under the Transnational Publishers imprint.

The Oxford Handbook of International Environmental Law

This chapter for the Handbook of Law and Economics provides an economic perspective of environmental law and policy. We examine the ends of environmental policy, that is, the setting of goals and targets, beginning with normative issues, notably the Kaldor-Hicks criterion and the related method of assessment known as benefit-cost analysis. We examine this analytical method in detail, including its theoretical foundations and empirical methods of estimation of compliance costs and environmental benefits. We review critiques of benefit-cost analysis, and examine alternative approaches to analyzing the goals of environmental policies. It;brgt;It;brgt;We examine the means of environmental policy, that is, the choice of specific policy instruments, beginning with an examination of potential criteria for assessing alternative instruments, with particular focus on cost-effectiveness. The theoretical foundations and experiential highlights of individual instruments are reviewed, including conventional, command-and-control mechanisms, market-based instruments, and liability rules. Three cross-cutting issues receive attention: uncertainty; technological change; and distributional considerations. We identify normative lessons in regard to design, implementation, and the identification of new applications, and we examine positive issues: the historical dominance of command-and-control; the prevalence in new proposals of tradeable permits allocated without charge; and the relatively recent increase in attention given to market-based instruments. It;brgt;It;brgt;We also examine the question of how environmental responsibility is and should be allocated among the various levels of government. We provide a positive review of the responsibilities of Federal, state, and local levels of government in the environmental realm, plus a normative assessment of this allocation of regulatory responsibility. We focus on three arguments that have been made for Federal environmental regulation: competition among political jurisdictions and the race to the bottom; transboundary environmental problems; and public choice and systematic bias.

International Environmental Law

Wolf and Stanley on Environmental Law provides law students, non-law students and professionals, such as Environmental Health Officers, with detailed but accessible coverage of environmental law in England and Wales.

Environmental Law and Policy

As conservation of the environment plays an increasingly important role within society, Birnie, Boyle, and Redgwell's International Law and the Environment continues to be an essential read for students and practitioners alike. Whilst remaining rooted within the substantive law, the book places legislation on the protection of the environment firmly at the core of the text. Written by experts in the field, the authors employ sharp and thorough analysis of the laws, allowing them to share their extensive knowledge and experience with the reader. The authors provide a unique perspective on the implications of international regulation, promoting a wider understanding of the pertinent issues impacting upon the law.

Wolf and Stanley on Environmental Law

This new title in the popular Text, Cases, and Materials series provides students with a thorough understanding of environmental law while also encouraging critical reflection and pointing out areas of controversy and debate. The authors present an impressive range of extracts from UK and international

cases, legislation, and articles, to help support learning and demonstrate how the law works in practice, clearly guiding students through key areas while providing insightful explanations and analysis. Topics have been carefully selected to support a wide range of environmental law courses and include pollution, conservation, town planning, and water regulation as well as considering environmental law in relation to the EU and from an international perspective. With its unique combination of extracts and author discussion, this new text provides a comprehensive and convenient guide to environmental law which can be relied upon throughout your course and career. This book is also accompanied by an Online Resource Centre which features updates to the law, further reading suggestions and useful weblinks.

Birnie, Boyle, and Redgwell's International Law and the Environment

"This well received book, informed by its interdisciplinary framework, succinctly yet accurately traverses and illuminates the full gamut of international environmental issues, laws and policies challenging the world today. The sixth edition responds to important developments arising subsequent to the fifth edition, relating, inter alia, to sustainable development, climate change, and energy. These developments include the Sustainable Development Goals (SDGs) of 2015, the 2015 Paris Agreement on Climate Change that replaced the Kyoto Protocol, and the challenges posed by renewable energy and global poverty. In sum, the book offers a synoptic overview, and instructive analysis of the relevant treaties, customary law, and soft law instruments governing all areas of international environmental law." -- Publisher.

Environmental Law: Text, Cases & Materials

A practical analytical framework for understanding and analyzing a complex and confusing regime of international environmental laws, this resource begins by considering the current state of play of international environmental law and describes the framework for approaching an issue in this area. The book provides a template for analyzing critical international environmental law issues, considers the legal regimes in twenty-six key markets that span the globe, and concludes by discussing global and cross-border matters.

International Environmental Law in a Nutshell

A concise, clear, and legally rigorous introduction to international environmental law and practice covering the very latest developments.

International Environmental Law

Environmental Law and Policy is a user-friendly, concise, inexpensive treatment of environmental law. Written to be read rather than used as a reference source, the authors provide a broad conceptual overview of environmental law while also explaining the major statutes and cases. The book is intended for four audiences - students (both graduate and undergraduate) seeking a readable study guide for their environmental law and policy courses; professors who do not use casebooks (relying on their own materials or case studies) but want an integrating text for their courses or want to include conceptual materials on the major legal issues; and practicing lawyers and environmental professionals who want a concise, readable overview of the field. For the Third Edition, new chapters have been written on climate change and energy, exploring the important developments in these rapidly changing areas. The first part of the book provides an engaging discussion of the major themes and issues t

International Environmental Law

This established and trusted Handbook for non-environmental law specialists provides a succinct account of how environmental law affects property, financial and business transactions. The book helps you to identify risk and to mitigate environment liabilities, reinforcing understanding with useful precedents and checklists. This edition has been substantially revised and updated to cover the latest developments and to include additional useful materials and information.

Environmental Law and Policy

Do we owe our duties to future generations? Do animals have rights? Should nature be respected for its own sake or only as a resource for human use? These questions and others are explored in the book, which takes a fresh approach by exploring environmental law in the context of ethical ideas. Written in

an accessible style and including many case studies, *Environmental Law and Ethics* is a concise text not only for students of law and related courses but also for all who are interested in environmental matters.

Environmental Law Handbook

The material contained in this book covers global themes, crosses jurisdictional borders, captures different theoretical perspectives and elucidates numerous substantive areas of the subject to provide an intellectual justification of the foundations of environmental law.

Environmental Law and Ethics

This volume is an important contribution to both theoretical and practical approaches to solving contradictions and conflicts between the approaches, principles, objectives and regulations of international environmental agreements. The issue of the coordination and streamlining of environmental agreements is of growing importance regarding the increasing number of international regulations on the one hand and the urgency for effective instruments in the light of continuing environmental degradation on the other. This study will become an essential reference for scholars as well as practitioners working in the field of international environmental law.

Environmental Law

The second edition of this sourcebook brings together a comprehensive selection of the principal international, European and domestic sources of environmental law, together with commentary and extensive references to secondary sources (including relevant websites). The new edition has been fully revised and extended to include the major developments in this rapidly evolving area of law. In particular, at the international level there is now consideration of the Kyoto Protocol 1997, the Aarhus Convention 1998, the Basel Protocol 1999 and the Biosafety Protocol 2000. At the European level, there is coverage of the changes introduced by the Amsterdam Treaty; the 2000 Water Framework Directive; the new Air Quality Directives; and the EC White Paper on Environmental Liability. There is also discussion of the proposed Sixth Environmental Action Programme. The domestic coverage includes consideration of the Pollution Prevention and Control Act 1999, the Countryside and Rights of Way Act 2000, the implementation of the contaminated land regime, together with coverage of the new UK waste strategy. The book now also includes extensive consideration of the impact of the Human Rights Act 1998 on environmental law. Recent case law is included throughout. This unique work will provide an extremely valuable resource for all those studying, teaching and working in the field of environmental law.

Conflicts in International Environmental Law

"This book was originally published as a monograph in the International encyclopaedia of laws / Environmental law."

Sourcebook on Environmental Law

This textbook provides a concise introduction for students with little or no legal background, to the role of law in environmental protection. It describes and explains law and legal systems, the concept of the environment, sources of environmental law and some of the techniques used in environmental law. Interdisciplinary in approach, the book explores some of the major connections between law and the disciplines of ethics, science, economics and politics. *Environment and Law* offers a greater understanding of international and national environmental law and has case-studies from all over the world, including examples from UK, US and Australian law.

Environmental Law in Switzerland

More than any other environmental law survey casebook, this book conveys the substantive material in real-world practice contexts, with significant chapters on permitting, rulemaking, enforcement, business counseling, and litigation, and through a series of short policy case study/emerging issue focus chapters.

Environmental Justice

Environmental law principles, such as the polluter pays, the precautionary principle or the common but differentiated responsibilities, have had a very important function in the shaping and evolution of the young sector of environmental law which has developed over the last fifty years. Yet, their status, content, binding force and functions in law remain largely uncertain. Forming a key part of the Elgar Encyclopedia of Environmental Law, this book examines the facets of environmental principles in international, national and regional law, as applied in different parts of the world and by a variety of courts. It assembles more than fifty contributions from all continents which clarify that, as the environment itself has no voice and cannot express its concerns, there is an overriding importance of scholars' active discussion of environmental principles. The book demonstrates that the necessity to preserve this planet requires a continuous, democratic discussion of values, objectives and concepts which are expressed in the numerous and continuously evolving environmental principles.

Environment and Law

Waite and Jewell: Environmental Law in Property Transactions provides a comprehensive practitioner guide to the environmental issues that arise in property transactions. It is divided into three key sections: 1. Commentary and guidance on the property transaction and identifies where the environmental issues might occur. 2. Broader discussion and explanation of specific environmental law issues that the practitioner needs to know about. 3. Provision of precedents to assist the busy property lawyer. This edition will give a general update following the last edition in 2009 and covers the Green Deal, Climate Change Regulations and the significant number of Environmental Permitting Regulations and Waste Regulations that have amassed since the last edition. Also includes a whole new chapter on climate change. Contents: Part I Approaching the Transaction: Chapter 1 Introduction to Parts I and II; Chapter 2 The need for information; Chapter 3 Preliminary enquiries; Chapter 4 Freedom of access to environmental information; Chapter 5 Local land charges search; Chapter 6 Local authority and Water Company enquiries; Chapter 7 Other sources of information; Chapter 8 Environmental survey; Chapter 9 Assessing and managing environmental risk: contractual provision and environmental insurance; Chapter 10 Particular transactions - leases and lending; Chapter 11 Development contracts; Chapter 12 Transferring permits; Part II The Broader Context: Chapter 13 Civil liability; Chapter 14 Statutory nuisance; Chapter 15 Contaminated land; Chapter 16 Waste; Chapter 17 Water; Chapter 18 Built environment; Chapter 19 Nature conservation; Chapter 20 Integrated pollution control and atmospheric pollution; Chapter 21 Climate Change; Part III Precedents. Previous edition ISBN: 9781845921064

This volume uncovers the interaction between people and the elements in very different British colonies throughout the world. Providing a rich overview of socio-environmental change, driven by imperial forces, this study examines a key global historical process.

Ecology and Power in the Age of Empire

This is a wide-ranging environmental history of late-19th and 20th century European imperialism, relating the expansion of modern empire, global trade, and mass consumption to the momentous ecological shifts they entailed and providing a historical background to the social, political, and environmental issues of the twenty-first century

Ecology, Climate and Empire

"This collection of essays from a pioneering scholar in the field of environmental history vividly demonstrates that concerns about climate change are far from being a uniquely modern phenomenon. Grove traces the origins of present-day environmental debates about soil erosion, deforestation and climate change in the writings of early colonial administrators, doctors and missionaries. He traces what is known and what can be inferred concerning historic El Nino events centuries before the devastating 1997/98 instance. In an important and wide-ranging concluding essay he analyses the general significance of 'marginal' land and its ecology in the history of popular resistance movements."--Amazon.com.

Eco-Cultural Networks and the British Empire

19th-century British imperial expansion dramatically shaped today's globalised world. Imperialism encouraged mass migrations of people, shifting flora, fauna and commodities around the world and led to a series of radical environmental changes never before experienced in history. *Eco-Cultural Networks and the British Empire* explores how these networks shaped ecosystems, cultures and societies throughout the British Empire and how they were themselves transformed by local and regional conditions. This multi-authored volume begins with a rigorous theoretical analysis of the categories of 'empire' and 'imperialism'. Its chapters, written by leading scholars in the field, draw methodologically from recent studies in environmental history, post-colonial theory and the history of science. Together, these perspectives provide a comprehensive historical understanding of how the British Empire reshaped the globe during the 19th and 20th centuries. This book will be an important addition to the literature on British imperialism and global ecological change.

Environments of Empire

"This collection explores the networks that shaped ecological change within and between European and Middle Eastern empires during the nineteenth and early twentieth centuries, and is divided into three parts. The first focuses on the role of nation-building in trans-imperial ecological transfers; the second focuses on approaches from the history of science, looking at the global transfer, circulation, and diffusion of ideas about the environment; and the third employs methods from animal studies, challenging anthropocentric views of environmental history"--

Ecology and Empire

Examines the relationship between the expansion of empire and the environmental experience of the extra-European world.

Empire and Environment in the Making of Manchuria

For centuries, some of the world's largest empires fought for sovereignty over the resources of Northeast Asia. This compelling analysis of the region's environmental history examines the interplay of climate and competing imperial interests in a vibrant – and violent – cultural narrative. Families that settled this borderland reaped its riches while at the mercy of an unforgiving and hotly contested landscape. As China's strength as a world leader continues to grow, this volume invites exploration of the indelible links between empire and environment – and shows how the geopolitical future of this global economic powerhouse is rooted in its past.

City, Country, Empire

A collection of essays addressing the collaboration of human and natural forces in the creation of cities, the countryside, and empires.

Five Emus to the King of Siam

Western exploitation of other peoples is inseparable from attitudes and practices relating to other species and the extra-human environment generally. Colonial depredations turn on such terms as 'human', 'savage', 'civilised', 'natural', 'progressive', and on the legitimacies governing apprehension and control of space and landscape. Environmental impacts were reinforced, in patterns of unequal 'exchange', by the transport of animals, plants and peoples throughout the European empires, instigating widespread ecosystem change under unequal power regimes (a harbinger of today's 'globalization'). This book considers these imperial 'exchanges' and charts some contemporary legacies of those inequitable imports and exports, transportations and transmutations. Sheep farming in Australia, transforming the land as it dispossessed the native inhabitants, became a symbol of (new, white) nationhood. The transportation of plants (and animals) into and across the Pacific, even where benign or nostalgic, had widespread environmental effects, despite the hopes of the acclimatisation societies involved, and, by extension, of missionary societies "planting the seeds of Christianity." In the Caribbean, plantation slavery pushed back the "jungle" (itself an imported word) and erased the indigenous occupants – one example of the righteous, biblically justified cultivation of the wilderness. In Australia, artistic depictions of landscape, often driven by romantic and 'gothic' aesthetics, encoded contradictory settler mindsets, and literary representations of colonial Kenya mask the erasure of ecosystems. Chapters on the early twentieth century (in Canada, Kenya, and Queensland) indicate increased awareness of the value of species-preservation, conservation, and disease control. The tension between traditional and 'Euroscientific' attitudes towards conservation is revealed in attitudes towards control of the Ganges, while the urge to resource exploitation has produced critical disequilibrium in Papua New Guinea. Broader concerns centering on ecotourism and ecocriticism are treated in further essays summarising how the dominant West has alienated 'nature' from human beings through commodification in the service of capitalist 'progress'.

Seeds of Empire

The traditional image of New Zealand is one of verdant landscapes with sheep grazing on lush green pastures. Yet this landscape is almost entirely an artificial creation. As Britain became increasingly reliant on its overseas territories for supplies of food and raw material, so all over the Empire indigenous plants were replaced with English grasses to provide the worked up products of pasture - meat, butter, cheese, wool, and hides. In New Zealand this process was carried to an extreme, with forest cleared and swamps drained. How, why and with what consequences did the transformation of New Zealand into these empires of grass occur? 'Seeds of Empire' provides both an exciting appraisal of New Zealand's environmental history and a long overdue exploration of the significance of grass in the processes of sowing empire.

Humans Versus Nature

"This book is about the ongoing conflict between humanity and the natural environment. Over the past 200,000 years, humans have multiplied and populated the Earth. When they domesticated plants and animals and replaced foraging with agriculture and herding, they depleted natural resources, deforested the land, and caused mass extinctions. But nature has agency too, causing pandemics of plague, smallpox, measles, influenza, and other diseases and a climate change called the Little Ice Age. In recent centuries, industrialization has accelerated extinctions, deforestation, and resource depletion, even in the oceans. Twentieth-century developmentalism and mass consumerism have caused global warming and other climate changes. Environmental movements have argued for the need to mitigate the negative consequences of technological and economic change. The future of humanity and the Earth depends on choices between achieving a sustainable balance between humans and nature, carrying on as before, or learning to manage the biosphere. environment, mass extinction, domestication, agriculture, pandemic, industrialization, developmentalism, consumerism, global warming"--

Empire Forestry and the Origins of Environmentalism

What we now know of as environmentalism began with the establishment of the first empire forest in 1855 in British India, and during the second half of the nineteenth century, over ten per cent of the land

surface of the earth became protected as a public trust. Sprawling forest reservations, many of them larger than modern nations, became revenue-producing forests that protected the whole 'household of nature', and Rudyard Kipling and Theodore Roosevelt were among those who celebrated a new class of government foresters as public heroes. Imperial foresters warned of impending catastrophe, desertification and global climate change if the reverse process of deforestation continued. The empire forestry movement spread through India, Africa, Australia, New Zealand, Canada and then the United States to other parts of the globe, and Gregory Barton's study looks at the origins of environmentalism in a global perspective.

Empire and Ecology in the Bengal Delta

What happens when a distant colonial power tries to tame an unfamiliar terrain in the world's largest tidal delta? This history of dramatic ecological changes in the Bengal Delta from 1760 to 1920 involves land, water and humans, tracing the stories and struggles that link them together. Pushing beyond narratives of environmental decline, Bhattacharyya argues that 'property-thinking', a governing tool critical in making land and water discrete categories of bureaucratic and legal management, was at the heart of colonial urbanization and the technologies behind the draining of Calcutta. The story of ecological change is narrated alongside emergent practices of land speculation and transformation in colonial law. Bhattacharyya demonstrates how this history continues to shape our built environments with devastating consequences, as shown in the Bay of Bengal's receding coastline.

Nature and Empire in Ottoman Egypt

Charts how changes in the control of natural resources fundamentally altered the nature of Ottoman imperial sovereignty.

Ecology and Empire

Reflects the growing awareness of the relationship between the expansion of empires and the environmental experience of the extra-European world. It provides a comparative historical approach to the impact of mankind on the ecological systems on which the settler societies were ultimately based.

Nature and Empire in Ottoman Egypt

In one of the first ever environmental histories of the Ottoman Empire, Alan Mikhail examines relations between the empire and its most lucrative province of Egypt. Based on both the local records of various towns and villages in rural Egypt and the imperial orders of the Ottoman state, this book charts how changes in the control of natural resources fundamentally altered the nature of Ottoman imperial sovereignty in Egypt and throughout the empire. In revealing how Egyptian peasants were able to use their knowledge and experience of local environments to force the hand of the imperial state, *Nature and Empire in Ottoman Egypt* tells a story of the connections of empire stretching from canals in the Egyptian countryside to the palace in Istanbul, from the forests of Anatolia to the shores of the Red Sea, and from a plague flea's bite to the fortunes of one of the most powerful states of the early modern world.

Epidemics, Empire, and Environments

Throughout the nineteenth century, cholera was a global scourge against human populations. Practitioners had little success in mitigating the symptoms of the disease, and its causes were bitterly disputed. What experts did agree on was that the environment played a crucial role in the sites where outbreaks occurred. In this book, Michael Zeheter offers a probing case study of the environmental changes made to fight cholera in two markedly different British colonies: Madras in India and Quebec City in Canada. The colonial state in Quebec aimed to emulate British precedent and develop similar institutions that allowed authorities to prevent cholera by imposing quarantines and controlling the disease through comprehensive change to the urban environment and sanitary improvements. In Madras, however, the provincial government sought to exploit the colony for profit and was reluctant to commit its resources to measures against cholera that would alienate the city's inhabitants. It was only in 1857, after concern rose in Britain over the health of its troops in India, that a civilizing mission of sanitary improvement was begun. As Zeheter shows, complex political and economic factors came to bear on the reshaping of each colony's environment and the urgency placed on disease control.

Empire and Environmental Anxiety

A new interpretation of imperialism and environmental change, and the anxieties imperialism generated through environmental transformation and interaction with unknown landscapes. Tying together South Asia and Australasia, this book demonstrates how environmental anxieties led to increasing state resource management, conservation, and urban reform.

Empire and Environment

Empire and Environment argues that histories of imperialism, colonialism, militarism, and global capitalism are integral to understanding environmental violence in the transpacific region. The collection draws its rationale from the imbrication of imperialism and global environmental crisis, but its inspiration from the ecological work of activists, artists, and intellectuals across the transpacific region. Taking a postcolonial, ecocritical approach to confronting ecological ruin in an age of ecological crises and environmental catastrophes on a global scale, the collection demonstrates how Asian North American, Asian diasporic, and Indigenous Pacific Island cultural expressions critique a de-historicized sense of place, attachment, and belonging. In addition to its thirteen chapters from scholars who span the Pacific, each part of this volume begins with a poem by Craig Santos Perez. The volume also features a foreword by Macarena Gómez-Barris and an afterword by Priscilla Wald.

On Arid Ground

On Arid Ground focuses on the relationships between empire and environment in Central Asia, using environmental history to examine the practice of Russian imperialism in Turkestan at the end of empire, from the 1860s until 1916. It reveals for the first time a comprehensive assessment of the environmental imprint of Russian colonisation, and shows how local ecologies fitted into broader repertoires of imperial rule, accommodation, and resistance. Ranging widely above and below the surface in Turkestan, from the deserts of Transcaspia to the highlands and lowlands of rural Fergana and Semirech'e, Jennifer Keating explores infrastructure development, migrant settlement, land reclamation and dispossession, the commodification of nature, and environmental violence to reveal the ways in which ecological change was central to the building and breaking of empire. Attentive to connections, synchronicities and scale, On Arid Ground makes the case for looking beyond cotton and water in Central Asian context, for the powerful material role played by animals and plants, sand, silt, and salt in human histories, and for the less visible relationships between far-flung people and things within and beyond Turkestan's borders. Laying bare the political roots and repercussions of environmental change, the volume brings fresh perspectives both to the history of Central Asia and to that of the wider Russian empire across Eurasia.

Cultivating the Colonies

The essays collected in Cultivating the Colonies demonstrate how the relationship between colonial power and nature reveals the nature of power. Each essay explores how colonial governments translated ideas about the management of exotic nature and foreign people into practice, and how they literally "got their hands dirty" in the business of empire. The eleven essays include studies of animal husbandry in the Philippines, farming in Indochina, and indigenous medicine in India. They are global in scope, ranging from the Russian North to Mozambique, examining the consequences of colonialism on nature, including its impact on animals, fisheries, farmlands, medical practices, and even the diets of indigenous people. Cultivating the Colonies establishes beyond all possible doubt the importance of the environment as a locus for studying the power of the colonial state.

The British Empire and the Natural World

This volume provides multi-layered analysis of the impact of British rule on the subcontinental environment. It focuses on areas like imagination of environment; politics of natural resource management; irrigation and flood control projects; cultural negotiations; and forest and ecological changes.

Climate of Conquest

What can war tell us about empire? In Climate of Conquest, Pratyay Nath seeks to answer this question by focusing on the Mughals. He goes beyond the traditional way of studying war in terms of battles and technologies. Instead, he unravels the deep connections that the processes of war-making shared with the society, culture, environment, and politics of early modern South Asia. Climate of Conquest

closely studies the dynamics of the military campaigns that helped the Mughals conquer North India and project their power beyond it. The author argues that the diverse natural environment of South Asia deeply shaped Mughal military techniques and the course of imperial expansion. He also sheds light on the world of military logistics, labour, animals, and the organization of war; the process of the formation of imperial frontiers; and the empire's legitimization of war and conquest. What emerges is a fresh interpretation of Mughal empire-building as a highly adaptive, flexible, and accommodative process.

The Nature of New York

Stradling shows how New York's varied landscape and abundant natural resources have played a fundamental role in shaping the state's culture and economy.

Across Forest, Steppe, and Mountain

Using Manchu and Chinese sources, this book explores the environmental history of Qing China's Manchurian, Inner Mongolian, and Yunnan borderlands.

Empire of Water

Supplying water to millions is not simply an engineering and logistical challenge. As David Soll shows in his finely observed history of the nation's largest municipal water system, the task of providing water to New Yorkers transformed the natural and built environment of the city, its suburbs, and distant rural watersheds. Almost as soon as New York City completed its first municipal water system in 1842, it began to expand the network, eventually reaching far into the Catskill Mountains, more than one hundred miles from the city. *Empire of Water* explores the history of New York City's water system from the late nineteenth century to the early twenty-first century, focusing on the geographical, environmental, and political repercussions of the city's search for more water. Soll vividly recounts the profound environmental implications for both city and countryside. Some of the region's most prominent landmarks, such as the High Bridge across the Harlem River, Central Park's Great Lawn, and the Ashokan Reservoir in Ulster County, have their origins in the city's water system. By tracing the evolution of the city's water conservation efforts and watershed management regime, Soll reveals the tremendous shifts in environmental practices and consciousness that occurred during the twentieth century. Few episodes better capture the long-standing upstate-downstate divide in New York than the story of how mountain water came to flow from spigots in Brooklyn and Manhattan. Soll concludes by focusing on the landmark watershed protection agreement signed in 1997 between the city, watershed residents, environmental organizations, and the state and federal governments. After decades of rancor between the city and Catskill residents, the two sides set aside their differences to forge a new model of environmental stewardship. His account of this unlikely environmental success story offers a behind-the-scenes perspective on the nation's most ambitious and wide-ranging watershed protection program.

An Environmental History of India

This *longue durée* survey of the Indian subcontinent's environmental history reveals the complex interactions among its people and the natural world.

Environmental Histories of the First World War

Surveys the ecological impacts of World War I, showing how the war had a global impact on the environment.

The Nature of Empires and the Empires of Nature

Drawing on themes from John MacKenzie's *Empires of Nature and the Nature of Empires* (1997), this book explores, from Indigenous or Indigenous-influenced perspectives, the power of nature and the attempts by empires (United States, Canada, and Britain) to control it. It also examines contemporary threats to First Nations communities from ongoing political, environmental, and social issues, and the efforts to confront and eliminate these threats to peoples and the environment. It becomes apparent that empire, despite its manifestations of power, cannot control or discipline humans and nature. Essays suggest new ways of looking at the Great Lakes watershed and the peoples and empires contained within it.

Nature's Colony

Established in 1859, Singapore's Botanic Gardens has served as a park for Singaporeans and visitors, a scientific institution, and a testing ground for tropical plantation crops. Each function has its own story, while the Gardens also fuel an underlying narrative of the juncture of administrative authority and the natural world. Created to help exploit natural resources for the British Empire, the Gardens became contested ground in conflicts involving administrators and scientists that reveal shifting understandings of power, science and nature in Singapore and in Britain. This continued after independence, when the Gardens featured in the "greening" of the nation-state, and became Singapore's first World Heritage Site. Positioning the Singapore Botanic Gardens alongside the Royal Botanic Gardens at Kew and gardens in India, Ceylon, Mauritius and the West Indies, this book tells the story of nature's colony—a place where plants were collected, classified and cultivated to change our understanding of the region and world.

The Climate of Rebellion in the Early Modern Ottoman Empire

The Climate of Rebellion in the Early Modern Ottoman Empire explores the serious and far-reaching impacts of Little Ice Age climate fluctuations in Ottoman lands. This study demonstrates how imperial systems of provisioning and settlement that defined Ottoman power in the 1500s came unraveled in the face of ecological pressures and extreme cold and drought, leading to the outbreak of the destructive Celali Rebellion (1595–1610). This rebellion marked a turning point in Ottoman fortunes, as a combination of ongoing Little Ice Age climate events, nomad incursions and rural disorder postponed Ottoman recovery over the following century, with enduring impacts on the region's population, land use and economy.

Salvaging Empire

Salvaging Empire probes the historical roots and current predicaments of a twenty-first century settler colony seeking to control an uncertain future through resource management and environmental science. Four decades after a violent 1982 war between the United Kingdom and Argentina reestablished British authority over the Falkland Islands (Las Malvinas in Spanish), a commercial fishing boom and offshore oil discoveries have intensified the sovereignty dispute over the South Atlantic archipelago. Scholarly literature on the South Atlantic focuses primarily on military history of the 1982 conflict. However, contested claims over natural resources have now made this disputed territory a critical site for examining the wider relationship between imperial sovereignty and environmental governance. James J. A. Blair argues that by claiming self-determination and consenting to British sovereignty, the Falkland Islanders have crafted a settler colonial protectorate to extract resources and extend empire in the South Atlantic. Responding to current debates in environmental anthropology, critical geography, Atlantic history, political ecology, and science and technology studies, Blair describes how settlers have asserted indigeneity in dynamic relation with the environment. Salvaging Empire uncovers the South Atlantic's outsized importance for understanding the broader implications of resource management and environmental science for the geopolitics of empire.

Tides of Empire

At the forested edge of Cambodia's development frontier, the infrastructures of global development engulf the land and existing social practices like an incoming tide. Cambodia's distinctive history of imperial surge and rupture makes it easier to see the remains of earlier tides, which are embedded in the physical landscape, and also floating about in the solidifying boundaries of religious, economic, and political classifications. Using stories from the hybrid population of settler-farmers, loggers, and soldiers, all cutting new social realities from the water and the land, this book illuminates the contradictions and continuities in what the author suggests is the final tide of empire.

Across Forest, Steppe and Mountain

Using Manchu and Chinese sources, this book explores the environmental history of Qing China's Manchurian, Inner Mongolian, and Yunnan borderlands.

A Temperate Empire

"A Temperate Empire explores the ways that colonists studied and tried to remake local climates in New England and Nova Scotia according to their plans for settlement and economic growth."--

Commonwealth Forestry and Environmental History

Today, predicting the impact of human activities on the earth's climate hinges on tracking interactions among phenomena of radically different dimensions, from the molecular to the planetary. *Climate in Motion* shows that this multiscale, multicausal framework emerged well before computers and satellites. Extending the history of modern climate science back into the nineteenth century, Deborah R. Coen uncovers its roots in the politics of empire-building in central and eastern Europe. She argues that essential elements of the modern understanding of climate arose as a means of thinking across scales in a state—the multinational Habsburg Monarchy, a patchwork of medieval kingdoms and modern laws—where such thinking was a political imperative. Led by Julius Hann in Vienna, Habsburg scientists were the first to investigate precisely how local winds and storms might be related to the general circulation of the earth's atmosphere as a whole. Linking Habsburg climatology to the political and artistic experiments of late imperial Austria, Coen grounds the seemingly esoteric science of the atmosphere in the everyday experiences of an earlier era of globalization. *Climate in Motion* presents the history of modern climate science as a history of “scaling”—that is, the embodied work of moving between different frameworks for measuring the world. In this way, it offers a critical historical perspective on the concepts of scale that structure thinking about the climate crisis today and the range of possibilities for responding to it.

Climate in Motion

A long environmental history of the Aral Sea region, focusing on colonization and development in Russian and Soviet Central Asia.

Pipe Dreams

When Samuel de Champlain founded the colony of Quebec in 1608, he established elaborate gardens where he sowed French seeds he had brought with him and experimented with indigenous plants that he found in nearby fields and forests. Following Champlain's example, fellow colonists nurtured similar gardens through the Saint Lawrence Valley and Great Lakes region. In *A Not-So-New World*, Christopher Parsons observes how it was that French colonists began to learn about Native environments and claimed a mandate to cultivate vegetation that did not differ all that much from that which they had left behind. As Parsons relates, colonists soon discovered that there were limits to what they could accomplish in their gardens. The strangeness of New France became woefully apparent, for example, when colonists found that they could not make French wine out of American grapes. They attributed the differences they discovered to Native American neglect and believed that the French colonial project would rehabilitate and restore the plant life in the region. However, the more colonists experimented with indigenous species and communicated their findings to the wider French Atlantic world, the more foreign New France appeared to French naturalists and even to the colonists themselves. Parsons demonstrates how the French experience of attempting to improve American environments supported not only the acquisition and incorporation of Native American knowledge but also the development of an emerging botanical science that focused on naming new species. Exploring the moment in which settlers, missionaries, merchants, and administrators believed in their ability to shape the environment to better resemble the country they left behind, *A Not-So-New World* reveals that French colonial ambitions were fueled by a vision of an ecologically sustainable empire.

A Not-So-New World

Aelian's *Historical Miscellany* is a pleasurable example of light reading for Romans of the early third century. Offering engaging anecdotes about historical figures, retellings of legendary events, and descriptive pieces - in sum: amusement, information, and variety - Aelian's collection of nuggets and narratives could be enjoyed by a wide reading public. A rather similar book had been published in Latin in the previous century by Aulus Gellius; Aelian is a late, perhaps the last, representative of what had been a very popular genre. Here then are anecdotes about the famous Greek philosophers, poets, historians, and playwrights; myths instructively retold; moralizing tales about heroes and rulers, athletes and wise men; reports about styles in dress, foods and drink, lovers, gift-giving practices, entertainments, religious beliefs and death customs; and comments on Greek painting. Some of the information is not preserved in any other source. Underlying it all are Aelian's Stoic ideals as well as this Roman's great admiration for the culture of the Greeks (whose language he borrowed for his writings).

Imperial Ecology
