2020 Updated Company Test For Maintenance test

15.A device that convert alternating current to direct current TEST (A) Inverter

15. A device that convert alternating current to direct current

A resistor is used to control in a circuit

It is a machine that converts mechanical into electrical energy

The total opposition to the flow of current is (A) resistance (B) impedance (C) induction (D) capacitance

Are substance which do not allow the passage of electricity (A) Semiconductor

It is an instrument used to measure Resistance

It is a safety device which will blow if the current flowing through it exceed its specified value. (A) Current

It is a machine that converts electrical into mechanical energy (A) Generator (B) Relay (C) Alternator (D) motor

When contacts are actuated, they disrupt the power through them. A Normally open type B Normally Close type C Both A and B D None of the above

Programmable controllers are often used to control machines or processes that are sequential in nature using "discrete" inputs and output that have been defined states

Gear Box is used to decrease the speed and increase the torque

A component having no continuity would have resistance

In PLC "T" is used for input and "O" used for output

An actuator is an input device that senses a physical condition

A level transmitter that checks the level in the tank is (A) Digital input (B) Analog output (C) Analog input D Digital output

The is moved toward the relay electromagnet when the relay is on. (A) Armature (B) Coil

A PLC can be used in a wide range of application such as (A) Automatic Door (B) Production and assembly lines (C) Traffic lights (D) All of the above

A solenoids contactor coil and lamps are usually connected to (A) Digital output (B) Digital input (C) Analog output (D) Analog input

A device for making breaking or changing connection in a circuit under load (A) Inductor (B) Growler

A PLC is capable of (A) Timing and counting (B) Sequencing (C) Monitoring input and output device (D) All of the above

A programmable controller is made up of two different section (A) Input and output System (8)

Sequencing The memory and the output system None of the above
