Truth and Science

This scarce antiquarian book is a facsimile reprint of the original. Due to its age, it may contain imperfections such as marks, notations, marginalia and flawed pages. Because we believe this work is culturally important, we have made it available as part of our commitment for protecting, preserving, and promoting the world's literature in affordable, high quality, modern editions that are true to the original work.

Magazin für philosophische, medizinische, und gerichtliche Seelenkunde

Six Stories is a radically new look at the intersection of science and art through “failed” images.

Six Stories from the End of Representation

The contributors to this volume examine the historical and philosophical issues concerning the role that scientific illustration plays in the creation of scientific knowledge.

Picturing Knowledge

The ideas of Charles Darwin and his fellow Victorian scientists have had an abiding effect on the modern world. But at the time *The Origin of Species* was published in 1859, the British public looked not to practicing scientists but to a growing group of professional writers and journalists to interpret the larger meaning of scientific theories in terms they could understand and in ways they could appreciate. *Victorian Popularizers of Science* focuses on this important group of men and women who wrote about science for a general audience in the second half of the nineteenth century. Bernard Lightman examines more than thirty of the most prolific, influential, and interesting popularizers of the day, investigating the dramatic lecturing techniques, vivid illustrations, and accessible literary styles they used to communicate with their audience. By focusing on a forgotten coterie of science writers, their publishers, and their public, Lightman offers new insights into the role of women in scientific inquiry, the market for scientific knowledge, tensions between religion and science, and the complexities of scientific authority in nineteenth-century Britain.

Victorian Popularizers of Science

The prevailing view of scientific popularization, both within academic circles and beyond, affirms that its objectives and procedures are unrelated to tasks of cognitive development and that its pertinence is by and large restricted to the lay public. Consistent with this view, popularization is frequently portrayed as a logical and hence inescapable consequence of a culture dominated by science-based products and procedures and by a scientistic ideology. On another level, it is depicted as a quasi-political device for channeling the energies of the general public along predetermined paths; examples of this are the nineteenth-century Industrial Revolution and the U. S. -Soviet space race. Alternatively, scientific popularization is described as a carefully contrived plan which enables scientists or their spokesmen to allege that scientific learning is equitably shared by scientists and non-scientists alike. This manoeuvre is intended to weaken the claims of anti-scientific protesters that scientists monopolize knowledge as a means of sustaining their social privileges. Popularization is also sometimes presented as a psychological crutch. This, in an era of increasing scientific specialisation, permits the researchers involved to believe that by transcending the boundaries of their narrow fields, their endeavours assume a degree of general cognitive importance and even extra scientific relevance. Regardless of the particular thrust of these different analyses it is important to point out that all are predicated on the tacit presupposition that scientific popularization belongs essentially to the realm of non-science, or only concerns the periphery of scientific activity.

Expository Science: Forms and Functions of Popularisation

No one really knows where nanotechnology is leading, what its pursuit will mean, and how it may affect human and other forms of life. Nevertheless, its research and development are moving briskly into that unknown. *Nanotalk* is a book of conversations and explorations with thirty five such nano-research scientists and engineers who share their ideas

Nanotalk

In the domain of visual images, those of fine art form a tiny minority. This original and brilliant book calls upon art historians to look beyond their traditional subjects—painting, drawing, photography, and printmaking—to the vast array of “nonart” images, including those from science, technology, commerce, medicine, music, and archaeology. Such images, James Elkins asserts, can be as rich and expressive as any canonical painting. Using scores of illustrations as examples, he proposes a radically new way of thinking about visual analysis, one that relies on an object’s own internal sense of organization. Elkins begins by demonstrating the arbitrariness of current criteria used by art historians for selecting images for study. He urges scholars to adopt, instead, the far broader criteria of the young field of image studies. After analyzing the philosophic underpinnings of this interdisciplinary field, he surveys the entire range of images, from calligraphy to mathematical graphs and abstract painting. Throughout, Elkins blends

philosophic analysis with historical detail to produce a startling new sense of such basic terms as pictures, writing, and notation.

The Domain of Images

This book examines the historical roots and evolution of simulation from an epistemological, institutional and technical perspective. Rich case studies go far beyond documentation of simulation's capacity for application in many domains; they also explore the "functional" and "structural" debate that continues to traverse simulation thought and action. This book is an essential contribution to the assessment of simulation as scientific instrument.

Simulation

The author uses social epistemology to develop the cognitive authority theory. The fundamental concept of cognitive authority is that people construct knowledge in two different ways: based on their first-hand experience or on what they have learned second-hand from others. What people learn first-hand depends on the stock of ideas they bring to the interpretation and understanding of their encounters with the world. People primarily depend on others for ideas as well as for information outside the range of direct experience. Much of what they think of the world is what they have gained second-hand. All that people know of the world beyond the narrow range of their own lives is what others have told them. However, people do not count all hearsay as equally reliable; only those who are deemed to "know what they are talking about" become cognitive authorities. --

Second-Hand Knowledge

Written 1924-1925 (CW 28) "Because I entered this world with defined soul predispositions, and because the course of my life, as expressed in my biography, is determined by those predispositions, as a spiritual human being I must have existed before my birth. As a being of spirit, I must be the repetition of someone through whose biography mine can be explained. In each life the human spirit appears as a repetition of itself with the fruits of experiences during previous lives. --Rudolf Steiner

Rudolf Steiner seldom spoke of himself in a personal way, but in his Autobiography we are offered a rare glimpse into some of the most intimate aspects of his inner life, his personal relationships, and significant events that helped to shape the philosopher, seer, and teacher he became. This edition restores the original format of seventy chapters, just as they were written for the Goetheanum weekly newsletter. This autobiography is not merely a narrative of Rudolf Steiner's successes and failures, but the story of a soul possessed of a precise, probing scientific mind and a natural clairvoyant ability to see into the spiritual world. Although naturally clairvoyant, Steiner always recognized the integrity and importance of modern scientific methods, and thus he developed a modern discipline he named Anthroposophy, or spiritual science. During the century that followed the events recorded in this autobiography, Rudolf Steiner's insights have touched and enriched numerous areas of life in ways that continue to transform people's lives in the twenty-first century. This illustrated, revised, updated, and expanded edition was the first volume to be released in The Collected Works of Rudolf Steiner. This series will eventually collect all of the English translations of Rudolf Steiner's works--including many never before in English--into an attractive and uniform set of his written and spoken words. Contents: Series Foreword, Introduction, and Chronological Context Part 1: Seeds of Awakening, Wiener-Neustadt to Vienna, 1861-1890 Part 2: Fertile Ground, Weimar, 1890 -1897 Part 3: Must I Remain Unable to Speak?, Berlin, 1897 -1907 A Chronology of Rudolf Steiner's Life and Work by Paul Allen Editorial and Reference Notes by Paul Allen (updated) Annotated Bibliography Index This volume is a translation from German of «Mein Lebensgang» (GA 28). A previous translation was titled The Course of My Life (1951).

Autobiography

They were mad, of course. Or evil. Or godless, amoral, arrogant, impersonal, and inhuman. At best, they were well-intentioned but blind to the dangers of forces they barely controlled. They were Faust and Frankenstein, Jekyll and Moreau, Caligari and Strangelove--the scientists of film and fiction, cultural archetypes that reflected ancient fears of tampering with the unknown or unleashing the little-understood powers of nature. In *From Faust to Strangelove* Roslyn Haynes offers the first detailed and comprehensive study of the image of the scientist in Western literature and film--from medieval images of alchemists to present-day depictions of cyberpunks and genetic engineers.

Beauty of Another Order

This collection of literature attempts to compile many of the classic works that have stood the test of time and offer them at a reduced, affordable price, in an attractive volume so that everyone can enjoy them.

From Faust to Strangelove

Visual Culture provides an invaluable resource of over 30 key statements from a wide range of disciplines, including four editorial essays which place the readings in their historical and theoretical context. Although underpinned by a focus on contemporary cultural theory, this reader puts issues of visual culture and the rhetoric of the image at center stage.

Friedrich Nietzsche Ein Kampfer Gegen Seine Zeit

Written in 1909 (CW 13) An authorized translation of this classic work, re-edited, beautifully typeset and designed, from a professional publisher dedicated to high-quality editions of Rudolf Steiner's books and lectures. The Anthroposophy of Rudolf Steiner is not a theoretical system, but the results of research based on direct observation. As Steiner's research was so vast and conducted over such a long period of time, no single book can be said to contain the whole of his spiritual teaching. However, of all his books Occult Science comes closest. Steiner even referred to it as "an epitome of anthroposophic Spiritual Science." The book systematically presents the fundamental facts concerning the nature and constitution of the human being and, chronologically, the history of the universe and humankind. Whereas the findings of natural science are derived from observations made through the senses, the findings of Spiritual Science, or Anthroposophy, are "occult" inasmuch as they arise from direct observation of realities hidden to ordinary perception. And yet these elements of humanity and the universe form the foundation of the sense world. A substantial part of Occult Science is taken up with a description of the preliminary training needed to make such spiritual observations. Given his energetic involvement in practical initiatives and extensive lecturing, Steiner had little time to write books. Of those he did write, four titles form an indispensable introduction to his later teaching: The Philosophy of Freedom (CW 4); Theosophy (CW 9); Knowledge of the Higher Worlds (CW 10); and Occult Science: An Outline (CW 13). Occult Science: An Outline is a translation from German of Die Geheimwissenschaft im Umriss (GA 13).

Visual Culture

In 1904, in the magazine Lucifer-Gnosis, Rudolf Steiner published some of his earliest articles on self-development, which became his classic How to Know Higher Worlds: A Modern Path of Initiation. Steiner continued his articles as "The Stages of Higher Development." He wrote of his intention in 1914: "A second part [of How to Know Higher Worlds] is to be added to this first part, bringing further explanations of the frame of mind that can lead to the experience of higher worlds." Though Steiner never found time to publish those articles as a book, they are collected in this volume. The Stages of Higher Knowledge records some of Steiner's early esoteric instructions, revealing how he became a pioneer of modern inner development and spiritual activity. He carefully guides the reader from an ordinary, sensory-based "material mode of cognition" through the higher levels of knowing he calls Imagination, Inspiration, and Intuition. This small handbook will help anyone who wishes to take a serious approach to Anthroposophy as a path of knowledge, especially those who have already studied and worked with How to Know Higher Worlds.

The Nature and Limits of Authority

Christianity as Mystical Fact and the Mysteries of Antiquity by Dr. Rudolf Steiner, Author of "Mystics of the Renaissance"

Occult Science

"Leading thoughts" and letters for members of the Anthroposophical Society (CW 26) "The leading thoughts here given are meant to open up subjects for study and discussion. Points of contact with them will be found in countless places in the anthroposophic books and lecture courses, so that the subjects thus opened up can be enlarged upon and the discussions in the groups centered around them." -- Rudolf Steiner This key volume contains Rudolf Steiner's "leading thoughts," or guiding principles, and related letters to members of the Anthroposophical Society. Using brief, aphoristic statements, Steiner succinctly presents his spiritual science as a modern path of knowledge, accompanied by "letters"

that expand and contextualize the guiding thought. These 185 thoughts constitute invaluable, clear summaries of Steiner's fundamental ideas--indeed, they contain the whole of Anthroposophy. They are intended not as doctrine, but to stimulate and focus one's study and discussion of spiritual science. "Anthroposophy is a path of knowledge to guide the Spiritual in the human being to the Spiritual in the universe.... Anthroposophy communicates knowledge that is gained in a spiritual way.... There are those who believe that with the limits of knowledge derived from sense perception the limits of all insight are given. Yet if they would carefully observe how they become conscious of these limits, they would find in the very consciousness of the limits the faculties to transcend them." -- Rudolf Steiner This volume is a translation of *Anthroposophische Leitsätze, Der Erkenntnisweg der Anthroposophie--Das Michael-Mysterium* (GA 26).

Renaissance Thought and Its Sources

From the introduction by Fritz C. A. Koelln: "Rudolf Steiner's Riddles of Philosophy: Presented in an Outline of Its History is not a history of philosophy in the usual sense of the word. It does not give a history of the philosophical systems, nor does it present a number of philosophical problems historically. Its real concern touches on something deeper than this, on riddles rather than problems. Philosophical concepts, systems and problems are, to be sure, to be dealt with in this book. But it is not their history that is to be described here. Where they are discussed they become symptoms rather than the objects of the search. The search itself wants to reveal a process that is overlooked in the usual history of philosophy. It is the mysterious process in which philosophical thinking appears in human history. Philosophical thinking as it is here meant is known only in Western civilization. Oriental philosophy has its origin in a different kind of consciousness, and it is not to be considered in this book. "What is new here is the treatment of the history of philosophic thinking as a manifestation of the evolution of human consciousness. Such a treatment requires a fine sense of observation. Not merely the thoughts must be observed, but behind them the thinking in which they appear. "To follow Steiner in his subtle description of the process of the metamorphosis of this thinking in the history of philosophy we should remember he sees the human consciousness in an evolution. It has not always been what it is now, and what it is now it will not be in the future. This is a fundamental conception of anthroposophy." READ THE COMPLETE INTRODUCTION BY FRITZ KOELLN. Stage of Higher Knowledge

The Rose Cross meditation is central to the western – Rosicrucian – path of personal development as presented by Rudolf Steiner. Steiner repeatedly referred to the meditation as a 'symbol of human development' that illustrates the transformation of the human being's instincts and desires. These work unconsciously in the soul, and in thought, feeling and will. Through personal development, the 'I' – the essential self – can gain mastery over these unconscious forces of the soul. The Rose Cross meditation features the red rose as an image to which the student, via specific means, aspires. To the plant is added the black cross which, pointing to the mystery of death and resurrection, provides a symbol of the higher development of the human I. The metamorphosis of the roses and the cross into the symbol of the Rose Cross is brought about by the student's inner efforts, creating an entirely new image. This becomes the starting point for further steps along the meditative path. The Rose Cross meditation is the only pictorial meditation whose content and structure Steiner described in such detail. In this invaluable book, the editor has drawn together virtually all Rudolf Steiner's statements on the subject, arranging

them chronologically within the motif of each chapter. His words are supported by commentary and notes.

Christianity as Mystical Fact and the Mysteries of Antiquity

"I hope that reading this book can become a kind of inner conversation. If this conversation unfolds in such a way that it reveals the hidden inner forces that can be awakened in every soul, then reading this book may lead to genuine, inner soul work. As a result you may find yourself gradually impelled to undertake the journey of the soul that truly leads to vision of the spiritual world." --Rudolf Steiner Part one, "A Way of Self-Knowledge": Eight meditations that take the reader on a journey through human experience. Beginning with ordinary experience, Steiner offers ways to imagine and understand the physical body, the elemental (or etheric) body, the elemental world, the Guardian of the Threshold, the astral body, the I-body (or thought body), the nature of experience in suprasensory worlds, and ways of perceiving previous earthly lives. Part two, "The Threshold of the Spiritual World": Sixteen short chapters in which Steiner provides aphoristic thoughts on trusting one's thinking, cognition of the spiritual world, karma and reincarnation, the astral body and luciferic beings, how to recognize suprasensory consciousness, the true nature of love, and more. These two complete books together represent Steiner's most personal statements about his own spiritual path. He speaks directly from experiences of cognitive research and explorations. Each of the meditations and aphorisms arises from his spiritual research and demonstrates how such spiritual research is to be undertaken. The "content" is Steiner's own, but readers can discover their own "content." Steiner's method of awareness--his path of attention to one's own experience--is universal and truly human. A Way of Self-Knowledge is a true sequel and complement to the classic of inner development, How to Know Higher Worlds. It lays out in a way that is accessible to anyone the road to self-knowledge and to the world of spirit. This Collected Works edition contains a new introduction, a chronology of Rudolf Steiner's life, and an index. Anthroposophical Leading Thoughts

These seven intimate, aphoristic talks were presented to a small group on Steiner's final visit to England. Because they were given to "pioneers" dedicated to opening a new Waldorf school, these talks are often considered one of the best introductions to Waldorf education. Steiner shows the necessity for teachers to work on themselves first, in order to transform their own inherent gifts. He explains the need to use humor to keep their teaching lively and imaginative. Above all, he stresses the tremendous importance of doing everything in the knowledge that children are citizens of both the spiritual and the earthly worlds. And, throughout these lectures, he continually returns to the practical value of Waldorf education. These talks are filled with practical illustrations and revolve around certain themes--the need for observation in teachers; the dangers of stressing the intellect too early; children's need for teaching that is concrete and pictorial; the education of children's souls through wonder and reverence; the importance of first presenting the "whole," then the parts, to the children's imagination. Here is one of the best introductions to Waldorf education, straight from the man who started it all. German source: Die Kunst des Erziehens aus dem Erfassen der Menschenwesenheit (GA 311). SYNOPSIS OF THE LECTURES LECTURE 1: The need for a new art of education. The whole of life must be considered. Process of incarnation as a stupendous task of the spirit. Fundamental changes at seven and fourteen. At seven, the forming of the "new body" out of the "model body" inherited at birth. After birth, the bodily milk as sole nourishment. The teacher's task to give "soul milk" at the change of teeth and "spiritual milk" at puberty. LECTURE 2: In first epoch of life child is wholly sense organ. Nature of child's environment and conduct of surrounding adults of paramount importance. Detailed observation of children and its significance. In second epoch, seven to fourteen, fantasy and imagination as life blood of all education, e.g., in teaching of writing and reading, based on free creative activity of each teacher. The child as integral part of the environment until nine. Teaching about nature must be based on this. The "higher truths" in fairy tales and myths. How the teacher can guide the child through the critical moment of the ninth year. LECTURE 3: How to teach about plants and animals (seven to fourteen). Plants must always be considered, not as specimens, but growing in the soil. The plant belongs to the earth. This is the true picture and gives the child an inward joy. Animals must be spoken of always in connection with humans. All animal qualities and physical characteristics are to be found, in some form, in the human being. Humans as synthesis of the whole animal kingdom. Minerals should not be introduced until

twelfth year. History should first be presented in living, imaginative pictures, through legends, myths, and stories. Only at eleven or twelve should any teaching be based on cause and effect, which is foreign to the young child's nature. Some thoughts on punishment, with examples. LECTURE 4: Development of imaginative qualities in the teacher. The story of the violet and the blue sky. Children's questions. Discipline dependent on the right mood of soul. The teacher's own preparation for this. Seating of children according to temperament. Retelling of stories. Importance of imaginative stories that can be recalled in later school life. Drawing of diagrams, from ninth year. Completion and metamorphosis of simple figures, to give children feeling of form and symmetry. Concentration exercises to awaken an active thinking as basis of wisdom for later life. Simple color exercises. A Waldorf school timetable. The "main lesson." LECTURE 5: All teaching matter must be intimately connected with

Picturing Science, Producing Art

This written attempt to create a spiritual anthropology was found among Rudolf Steiner's unpublished works after his death. Although fragmentary, this key work on "Anthroposophy" is of enormous interest and importance. It is work whose time has finally arrived. Here are the first steps toward the development of a true psychology of spirit, using a phenomenological approach to the human senses, the life processes, the I-experience, the human form, and the human relationship to higher spiritual worlds. Steiner struggled to express the concepts related in this book, since many of the terms used in neurology, psychology, and cognitive studies did not yet exist in 1910. Since then there has been much progress, and this translation benefits from more than eighty years of development in the study of the human senses, cognition, and, neurology. Steiner's "Anthroposophy" lies halfway between anthropology and theosophy as a means of studying the human being. On the one hand, anthropology studies the human being through the physical senses using empirical scientific method; theosophy, on the other hand, recognizes the spiritual nature of the human being based on inner experience and attempts to understand human nature within the realm of spirit. Anthroposophy takes the middle way, studying human beings as they present themselves to physical observation while, at the same time, attempting to derive indications of the spiritual foundations of phenomena through a process of "phenomenological intensification." The results of this intensification are extremely important and constitute the first steps toward a truly cognitive psychology. Included are an introduction by neurologist Dr. James Dyson, an anthroposophic doctor; a foreword by Robert Sardello, co-founder and co-director of The School of Spiritual Psychology; and a translator's preface by Detlef Hardorp. While not an easy text, Anthroposophy (A Fragment) is essential for understanding Steiner's view of the human body--especially its formation and function in relation to spirit. The Riddles of Philosophy

"History often provides insight into the present. Consider the American South one hundred and fifty years ago, for example. There, human rights and economic servitude were compressed onto a single domain for black Americans. They became a means of production that could be bought and sold as a commodity. In many parts of the South, it was forbidden to teach blacks to read. Control by law of education, part of culture, was found necessary to subordinate human rights to economics. The domain of rights and economics thus also engulfed culture." --Joseph Weizenbaum, from the foreword Culture, politics, economics--these are the three core activities of society; the health of any society depends on a harmonious interaction among these three activities. And, according to Rudolf Steiner, this is impossible unless they are autonomous to the degree that they can each find their own essential character. In his foreword, Joseph Weizenbaum observes that those who framed the United States Constitution understood this--at least partially--when they developed the doctrine of a separate church and state. These essays cover a range of subjects--money, the division of labor, human motivation, and education. They offer refreshing insights into the nature of modern society as well as guidance for solving today's pressing social problems. THE ROSE CROSS MEDITATION

Greatly influenced by Charles Darwin, the famed German zoologist and philosopher Ernst Haeckel (1834-1919) boldly defended the fact of organic evolution and seriously considered its far-reaching ramifications for science, philosophy, and theology. Advocating the interplay of empirical evidence and rational speculation, *The Riddle of the Universe* is his most daring, comprehensive, and successful work. Its monistic and naturalistic worldview offers a cosmic perspective and evolutionary framework that supplants traditional theistic beliefs in God, free will, and the personal immortality of the human soul. This classic volume remains a tour de force of critical thought, free inquiry, and intellectual value. This is the Second Edition, first published in 1901, and includes a Translator's Preface by Joseph McCabe.

Renaissance Thought II

From Acting to Performance collects for the first time major essays by performance theorist and critic Philip Auslander. Together these essays provide a survey of the changes in acting and performance during the crucial transition from the ecstatic theatre of the 1960s to the ironic postmodernism of the 1980s. Auslander examines performance genres ranging from theatre and dance to performance art and stand-up comedy. In doing so he discusses an impressive line-up of practitioners including Antonin Artaud, Jerzy Grotowski, Peter Brook, Willem Dafoe, the Wooster Group, Augusto Boal, Kate Bornstein, and Orlan. *From Acting to Performance* is a must for all students and scholars interested in contemporary theatre and performance.

A Way of Self-Knowledge

This extraordinary book documents the therapeutic journey taken by Rut, a childhood victim of sexual abuse, from her suppressed childhood pain to her artistic expression of the trauma. Her pictorial work created during her psychotherapy enables her in her speechlessness and depression to recapture the story of her childhood, and, in dialogues with her psychotherapist, to integrate it into her everyday life. Rut's pictures and texts give direct evidence of the trauma of sexual abuse; they make it perceptible, arouse empathy, demonstrate its psychological consequences, and at the same time show a way to work through the trauma. In the second part of the book, the two co-authors, both psychotherapists, discuss the creative process and pictorial work in an art-therapeutic and scientific setting, thus establishing a theoretical background. This book delineates part of Rut's psychological healing process, and is of great interest to professionals and students in psychology, psychotherapy, psychiatry and medicine, as well as art therapy, education, social work and spiritual counseling.

The Kingdom of Childhood

Rudolf Steiner said of his mystery dramas--written between 1910 and 1913--that they contain the whole essence of Anthroposophy and that if, through some unlikely chance, only these dramas were to survive, the essential content of Anthroposophy would nevertheless be preserved. Steiner's dramas powerfully portray the complex processes of reincarnation and karma. In them, we are led to inhabit the living landscape of the human soul and spirit, where suprasensory beings weave destinies. Here we find a connection with the spiritual reality of human life itself by following the dramatic interplay of the joy and sorrow, struggle and striving of a group of individuals attempting to apply spiritual knowledge to their practical lives and relationships. To read, watch, or act in these plays is an initiation experience. In *The Souls' Awakening*--Steiner's fourth mystery drama--an enlightened entrepreneur appoints a scientist, a historian, and an artist to use their spiritual perceptions to transform his business into one that serves spiritual as well as practical needs. A long-standing colleague objects, and a series of conflicts and crises develops. As the plot unfolds, we follow the characters on a journey that moves from business meetings through various states of consciousness, into worlds known before birth and previous lives in Egypt. This classic translation by Ruth and Hans Pusch was revised for this volume by Ruth Pusch. Included is Hans Pusch's "Thoughts on the Seal," in which he discusses the Rosicrucian meaning of the seal represented on the cover. This book is a translation of "Der Seelen Erwachen," published as part four of *Vier Mysteriendramen The Four Mystery Dramas*), which includes "The Portal of Initiation"; "The Soul's Probation"; "The Guardian of the Threshold"; and "The Souls' Awakening."

Anthroposophy (A Fragment)

The field of literary studies has long recognised the centrality of psychoanalysis as a method for looking at texts in a new way. But rarely has the relationship between psychoanalysis and performance been mapped out, either in terms of analysing the nature of performance itself, or in terms of making sense of specific performance-related activities. In this volume some of the most distinguished thinkers in the field make this exciting new connection and offer original perspectives on a wide variety of topics, including: · hypnotism and hysteria · ventriloquism and the body · dance and sublimation · the unconscious and the rehearsal process · melancholia and the uncanny · cloning and theatrical mimesis · censorship and activist performance · theatre and social memory. The arguments advanced here are based on the dual principle that psychoanalysis can provide a productive framework for understanding the work of performance, and that performance itself can help to investigate the problematic of identity.

Renewal of the Social Organism

Excellent instruction manual for people who want to learn traditional astrological concepts and interpretation. The book covers all the basics as well as the not-so-obvious, and the planetary glyphs in the thumb margins make it a reference that every student of astrology will want to keep within easy reach.
