Manual of Conchology, Structural and Systemic; with Illustrations of the Species ...

This is a reproduction of a book published before 1923. This book may have occasional imperfections such as missing or blurred pages, poor pictures, errant marks, etc. that were either part of the original artifact, or were introduced by the scanning process. We believe this work is culturally important, and despite the imperfections, have elected to bring it back into print as part of our continuing commitment to the preservation of printed works worldwide. We appreciate your understanding of the imperfections in the preservation process, and hope you enjoy this valuable book. ++++ The below data was compiled from various identification fields in the bibliographic record of this title. Manual of Conchology, Structural and Systematic

Excerpt from Manual of Conchology, Structural and Systemic: With Illustrations The Scaphopoda have hitherto received comparatively little attention from either conchological or morphological naturalists. No other molluscan group of like rank and extent exists upon which the anatomical data are so scanty, or restricted to so small a number of species; and as the Class consists mainly of deep sea dwellers, the list of species now known is doubtless a mere fraction of the grand total of living forms. Consonant with the general plan of the "Manual," this volume treats primarily of the "system" of Scaphopods, and the determination of genera and species. A classification of the Dentaliid based upon features hitherto untried for this purpose is submitted; and the innovation is made of including a catalogue of fossil species, largely with a view to rectify the current nomenclature and prevent future complications by the duplication of specific names. The labor of collating the references to fossil forms has been, in large measure, accomplished by Dr. Benj. Sharp. The work is based upon the collection of the Academy of Natural Sciences, containing a large proportion of known shore species, and upon that of the United States National Museum, including the types of Dall, Jeffreys, Verrill and Gould. This great collection, undoubtedly richer than any other in existence in deep sea forms, was, with generosity rarely equalled, placed at my disposal by Prof. William H. Dall, Honorary Curator, and the authorities of the Museum. My most earnest thanks are due to them for this and other courtesies. The published works of Dall, Watson and Jeffreys have been freely quoted herein; and it is to the critical acumen and large experience of these masters of conchological science, transplanted to our pages, that much of their value is due. An account of the Aplacophora is also included in this volume, partly for the sake of greater completeness, partly to call the attention of conchologists to this important group, which has doubtless been neglected by many who have opportunities for collecting. Excerpt from Manual of Conchology, Structural and Systematic, Vol. 15: With Illustrations of the Species; Polyplacophora, Acanthochitid, Cryptoplacid, and Appendix; Tectibranchiata As it is not proposed to include the nudibranchiata' in the manual, the present volume will complete the First Series, as originally projected by its illustrious founder. The Conchological Section of the Academy of Natural Sciences contemplates the commencement of a Third Series of the Manual of Conchology, to include the Marine bivalve Mollusks. The continued support of the subscribers to the First Series is earnestly desired, for Without their liberal aid this great enterprise cannot be undertaken.
