Burt Holmes,

P.I. in space Burt Holmes used to be a cop on Perseus space station, a place known for its docks and jails. Now he's a private eye who knows his own flaws all too well... and has gaps in his memory. Burt was kicked off the force for killing someone, though he can't remember it. Nowadays he usually handles divorce cases. He's facing his hardest job yet working for Wade Hampton, who is one moment a hardened-and deadly-ship's captain, the next an insecure young girl who tugs at his protective instincts. Then an old nemesis-a child predator-escapes from jail. Life gets complicated, with assassin drones, gangsters, a badass robot, and a kid in danger. Is Burt up to saving the day, solving the crimes-or handling the return of his own memories?

Vol. 57, no. 3 is a "Directory issue."

Merchant Vessels of the United States

Announcements for the following year included in some vols.

Phi Delta Kappa Directory

Who Was Who in America preserves the lifetime accomplishments of many world history-makers. Extending a tradition of excellence in recording and publishing essential data, Who Was Who in America has proved its uniqueness and usefulness in countless research applications. Each biographical entry provides personal data unavailable in any other source: family relationships, political affiliations, key positions held, awards, published writings, and other basic facts and vital statistics. Approximately every three years, sketches of Marquis Who's Who Biographees who have died since publication of the prior volume of Who Was Who in America are incorporated into a new compilation. Who Was Who

in America is publisher in 14 convenient, chronological volumes which may be purchased separately or together.

The Palm of Alpha Tau Omega

The objective of this volume is to provide recent information on neural regulation in the endocrine system in vertebrates. Classical studies have revealed that certain neurons synthesize and release chemical messengers into the blood vascular system. These neurons are endocrine devices that link the brain with the endocrine glands and other target organs. In vertebrates the hypothalamus is the seat of chemical coordination and integration of environmental and hormonal cues to modulate function of the pituitary, and, consequently, the functions of other endocrine glands. Information generated during the past few decades has resulted in profound alterations in the conceptual fabric of endocrinology. From the wealth of information that emerged on neuropeptides of the central nervous system, and connectivities of various brain centers, it has become clear that several extra-hypothalamic sites are also involved in regulation of hypophysial hormones. This volume is divided into five sections: brain regulation of pituitary, brain GnRH and regulation of pituitary in fish, brain control of growth hormone in fish and birds, brain regulation in mammalian luteinizing hormone, and neural control of other endocrines and the immune system. It is hoped that this volume will prove useful to researchers, teachers, and students involved in research and teaching in neuroendocrinology and comparative endocrinology.
