ANSWER B: The transtheoretical model of health education was developed by Prochaska and Velicer in 1997. The steps, in order, are precontemplation, contemplation, preparation, action, and, finally, maintenance of the behavior.

According to Becker, which of the following factors plays a large role in influencing a patient's health?

a. Education b. Income c. Family support d. Language spoken

Who determines an APRN's right to write prescriptions? a. Standards of Practice b. The American

Nursing Association c. The state where the APRN is practicing d. The Drug Enforcement Agency

What type of research involves analyzing how well a medical treatment is progressing? a. Causation

b. Meta-analysis c. Therapy d. Systemic review

A thin young adult comes into the emergency room with a sudden onset of right-sided chest pain and shortness of breath following a run. What do you suspect? a. Myocardial infarction b. Aortic dissection

c. Asthma flare d. Spontaneous pneumothorax

ANSWER C: The excess fatty material in the blood could manifest as opaque corneas and xanthomas, small fatty deposits most commonly found on the eyelid.

Brudzinski sign and Kernig sign are both indications of: a. Carpal tunnel syndrome b. DVT c. Cushing syndrome d. Meningitis

ANSWER C: Current recommendations are that men should begin early PSA and prostate checks at age 50. If a man has a strong family history or other risk factors, or begins having symptoms, then screening can begin at an earlier age, depending on the guidance provided by his physician.

ANSWER B: Erythromycin lessens theophylline's effectiveness and should not be prescribed in a patient who is taking theophylline. Consider an alternate antibiotic.
