The Bright Hour

"Built on her ... Modern Love column, 'When a Couch is More Than a Couch' (9/23/2016), a ... memoir of living meaningfully with 'death in the room' by the 38-year-old great-great-great granddaughter of Ralph Waldo Emerson--mother to two young boys, wife of 16 years--after her terminal cancer diagnosis"--

Late Fragments

Kate Gross was a woman who 'leaned in' until cancer stopped her in her tracks. Now terminal, this brave, frank and heartbreaking book shows what it means to die before your time, and how to fill your life with wonder, hope and joy even in the face of tragedy.

The Art of Death

A moving reflection on a subject that touches us all, by the bestselling author of *Claire of the Sea* Light Edwidge Danticat's *The Art of Death: Writing the Final Story* is at once a personal account of her mother dying from cancer and a deeply considered reckoning with the ways that other writers have approached death in their own work. "Writing has been the primary way I have tried to make sense of my losses," Danticat notes in her introduction. "I have been writing about death for as long as I have been writing." The book moves outward from the shock of her mother's diagnosis and sifts through Danticat's writing life and personal history, all the while shifting fluidly from examples that range from Gabriel García Márquez's *One Hundred Years of Solitude* to Toni Morrison's *Sula*. The narrative, which continually circles the many incarnations of death from individual to large-scale catastrophes, culminates in a beautiful, heartrending prayer in the voice of Danticat's mother. A moving tribute and a work of astute criticism, *The Art of Death* is a book that will profoundly alter all who encounter it.

The Unwinding of the Miracle

THE NEW YORK TIMES BESTSELLER 'Julie Yip-Williams conquered blindness and adversity only to be struck down. Her book is heartbreaking and necessary.' Guardian 'Eloquent, gutting and at times disarmingly funny ... a magnificent writer.' New York Times Born blind in Vietnam, Julie Yip-Williams narrowly escaped euthanasia at the hands of her grandmother, only to have to flee the political upheaval

of the late 1970s with her family. Loaded into a rickety boat with three hundred other refugees, Julie made it to Hong Kong and, ultimately, America, where a surgeon gave her partial sight. Against all odds, she became a Harvard-educated lawyer, with a husband, a family, a life. Then, at the age of thirty-seven, with two little girls still at home, Julie was diagnosed with terminal metastatic colon cancer, and a different journey began. Growing out of a blog Julie kept for the last four years of her life, *The Unwinding of the Miracle* is the story of a vigorous life told through the prism of imminent death, of a life lived vividly and cut too short. With glorious humour, bracing honesty and the cleansing power of well-deployed anger, her story is inspiring and instructive, delightful and shattering. More than just a tale about cancer, it's about truth and honesty, fear and pain, our dreams, our jealousies. And it's about how to say goodbye to your children and a life you love. Starting as a need to understand the disease, it has evolved into a powerful story about living - even as Julie put her affairs in order and prepared to die. 'A searing memoir ... I didn't know Julie, but in these pages I grew to love her.' Lucy Kalanithi

When Breath Becomes Air

**** SUNDAY TIMES NUMBER ONE BESTSELLER**** 'Rattling. Heartbreaking. Beautiful.' Atul Gawande, bestselling author of *Being Mortal* What makes life worth living in the face of death? At the age of thirty-six, on the verge of completing a decade's training as a neurosurgeon, Paul Kalanithi was diagnosed with inoperable lung cancer. One day he was a doctor treating the dying, the next he was a patient struggling to live. *When Breath Becomes Air* chronicles Kalanithi's transformation from a medical student asking what makes a virtuous and meaningful life into a neurosurgeon working in the core of human identity - the brain - and finally into a patient and a new father. Paul Kalanithi died while working on this profoundly moving book, yet his words live on as a guide to us all. *When Breath Becomes Air* is a life-affirming reflection on facing our mortality and on the relationship between doctor and patient, from a gifted writer who became both. 'A vital book about dying. Awe-inspiring and exquisite. Obligatory reading for the living' Nigella Lawson

Once More We Saw Stars

"This is a Borzoi book published by Alfred A. Knopf"--Copyright page.

Lucky, Lucky

SHORTLISTED FOR THE 2017 STELLA PRIZE In the year before her death, as she struggled with an untreatable illness, Cory Taylor began to write about her experiences, the patterns of her life, and of those she had lost. *Dying* is about vulnerability and strength, courage and humility, and anger. It is also about the acceptance that it takes to live a good life and say goodbye to it in peace.

Dying

The star of "Long Island Medium" shares inspiring, spirit-based lessons on how to work through and overcome grief, in a guide that also offers example testimonies about the experiences of her clients

Good Grief

"Patients, anxious to convey their symptoms, feel an urgency to "make their case" to their doctors. Doctors, under pressure to be efficient, multitask while patients speak and often miss the key elements. Add in stereotypes, unconscious bias, conflicting agendas, and fear of lawsuits and the risk of misdiagnosis and medical errors multiplies dangerously. ... Reporting on the latest research studies and interviewing scholars, doctors, and patients, Dr. Ofri reveals how better communication can lead to better health for all of us."--Jacket.

What Patients Say, what Doctors Hear

*** #1 NEW YORK TIMES BESTSELLER * #1 INTERNATIONAL BESTSELLER * MORE THAN 2 MILLION COPIES SOLD!** A heartbreaking and hilarious memoir by iCarly and Sam & Cat star Jennette McCurdy about her struggles as a former child actor—including eating disorders, addiction, and a complicated relationship with her overbearing mother—and how she retook control of her life. Jennette McCurdy was six years old when she had her first acting audition. Her mother's dream was for her only daughter to become a star, and Jennette would do anything to make her mother happy. So she went along with what Mom called "calorie restriction," eating little and weighing herself five times a day. She endured extensive at-home makeovers while Mom chided, "Your eyelashes are invisible, okay?"

You think Dakota Fanning doesn't tint hers?" She was even showered by Mom until age sixteen while sharing her diaries, email, and all her income. In *I'm Glad My Mom Died*, Jennette recounts all this in unflinching detail—just as she chronicles what happens when the dream finally comes true. Cast in a new Nickelodeon series called *iCarly*, she is thrust into fame. Though Mom is ecstatic, emailing fan club moderators and getting on a first-name basis with the paparazzi ("Hi Gale!"), Jennette is riddled with anxiety, shame, and self-loathing, which manifest into eating disorders, addiction, and a series of unhealthy relationships. These issues only get worse when, soon after taking the lead in the *iCarly* spinoff *Sam & Cat* alongside Ariana Grande, her mother dies of cancer. Finally, after discovering therapy and quitting acting, Jennette embarks on recovery and decides for the first time in her life what she really wants. Told with refreshing candor and dark humor, *I'm Glad My Mom Died* is an inspiring story of resilience, independence, and the joy of shampooing your own hair.

I'm Glad My Mom Died

"*We Don't Die: A Skeptic's Discovery of Life After Death*" gives credible evidence of life after death. The goal of "*We Don't Die*" is to have people believe that their deceased loved ones are still near them, help them navigate through the grieving process and educate that we are 'eternal souls having a human experience. It is unique because it teaches people about the grieving process, keeping relationships whole, gives awe inspiring exercises that the reader experiences that we must be 'more than our bodies.' It gets readers in touch with the purpose of their lives and gets them on the path to producing results. Readers will no longer fear death, their pain of losing someone will be lessened, they will have hope, faith, and powerful access to live a successful life.

We Don't Die

A compassionate, honest, and illuminating look at the dying process . . . As a long-time hospice volunteer, Jennie Dear has helped countless patients, families, and caregivers cope with the many challenges of the dying process. Inspired by her own personal journey with her mother's long-term illness, Dear demystifies the experience of dying for everyone whose lives it touches. She spoke to doctors, nurses, and caregivers, as well as families, friends, and the patients themselves. The result is a brilliantly researched, eye-opening account that combines the latest medical findings with sensitive human insights to offer real emotional support and answers to some of the questions that affect us all. Does dying hurt? A frank discussion of whether dying has to be painful—and why it sometimes is even when treatment is readily available. Is there a better way to cope with dying? Comforting stories of people who found peace in the face of death , and some of the expert methods they used for getting there. The last few hours: What does it feel like to die? Powerful glimpses from dedicated professionals into the physical experiences of people in their final moments—plus comforting words and insights from those who are there to help.

What Does It Feel Like to Die?

'I loved this book, I was moved by this book and now I will share this book with my own mother.' Elizabeth Gilbert, author of *Eat, Pray, Love*. From the New York Times best-selling author of *The Middle Place* comes a new memoir that examines the bond between mothers and daughters. Kelly Corrigan's mother summarised the the division of labour in her family as: 'Your father's the glitter, but I'm the glue.' This meant nothing to Kelly, who left her childhood sure that her mum would be nothing more than background for the rest of Kelly's life. After college, she took off see things and Become Interesting. In a matter of months her savings had dwindled and she needed a job. That's how she met John Tanner, a newly widowed Australian father of two looking for a live-in nanny. There, in that small, motherless house her mother's voice was suddenly everywhere. Each day she spent with the Tanner kids was a day she spent reconsidering her relationship with her mother, turning it over in her hands like a shell, trying to hear whatever messages might be trapped in its shadowy spiral. This is a book about who you admire and why, and how that changes over time.

Glitter and Glue

Inspired by the website that the New York Times hailed as "redefining mourning," this book is a fresh and irreverent examination into navigating grief and resilience in the age of social media, offering comfort and community for coping with the mess of loss through candid original essays from a variety of voices, accompanied by gorgeous two-color illustrations and wry infographics. At a time when we mourn public figures and national tragedies with hashtags, where intimate posts about loss go viral and we

receive automated birthday reminders for dead friends, it's clear we are navigating new terrain without a road map. Let's face it: most of us have always had a difficult time talking about death and sharing our grief. We're awkward and uncertain; we avoid, ignore, or even deny feelings of sadness; we offer platitudes; we send sympathy bouquets whittled out of fruit. Enter Rebecca Soffer and Gabrielle Birkner, who can help us do better. Each having lost parents as young adults, they co-founded Modern Loss, responding to a need to change the dialogue around the messy experience of grief. Now, in this wise and often funny book, they offer the insights of the Modern Loss community to help us cry, laugh, grieve, identify, and—above all—empathize. Soffer and Birkner, along with forty guest contributors including Lucy Kalanithi, singer Amanda Palmer, and CNN's Brian Stelter, reveal their own stories on a wide range of topics including triggers, sex, secrets, and inheritance. Accompanied by beautiful hand-drawn illustrations and witty "how to" cartoons, each contribution provides a unique perspective on loss as well as a remarkable life-affirming message. Brutally honest and inspiring, Modern Loss invites us to talk intimately and humorously about grief, helping us confront the humanity (and mortality) we all share. Beginners welcome.

Modern Loss

"[An] often beautiful jewel of a book . . . Black's power as a writer means she can take us with her to places that normally our minds would refuse to go."—The New York Times Book Review (Editors' Choice) From the New York Times bestselling author of *The Still Point of the Turning World* comes an incisive memoir about how she came to question and redefine the concept of resilience after the trauma of her first child's death. "Congratulations on the resurrection of your life," a colleague wrote to Emily Rapp Black when she announced the birth of her second child. The line made Rapp Black pause. Her first child, a boy named Ronan, had died from Tay-Sachs disease before he turned three years old, an experience she wrote about in her second book, *The Still Point of the Turning World*. Since that time, her life had changed utterly: She left the marriage that fractured under the terrible weight of her son's illness, got remarried to a man who she fell in love with while her son was dying, had a flourishing career, and gave birth to a healthy baby girl. But she rejected the idea that she was leaving her old life behind—that she had, in the manner of the mythical phoenix, risen from the ashes and been reborn into a new story, when she still carried so much of her old story with her. More to the point, she wanted to carry it with her. Everyone she met told her she was resilient, strong, courageous in ways they didn't think they could be. But what did those words mean, really? This book is an attempt to unpack the various notions of resilience that we carry as a culture. Drawing on contemporary psychology, neurology, etymology, literature, art, and self-help, Emily Rapp Black shows how we need a more complex understanding of this concept when applied to stories of loss and healing and overcoming the odds, knowing that we may be asked to rebuild and reimagine our lives at any moment, and often when we least expect it. Interwoven with lyrical, unforgettable personal vignettes from her life as a mother, wife, daughter, friend, and teacher, Rapp Black creates a stunning tapestry that is full of wisdom and insight.

Sanctuary

Find solace, hope and happiness through 12 fascinating birds whose song is never far away - if only we know where to look . . . 'A lyrical and life-affirming book that teaches us as much about birds as it does ourselves - a balm for the soul' Raynor Winn, author of *The Salt Path* 'Charlie has opened my eyes to the constant joy of the sights and sounds of the birds that surround us. It is a book that really will save lives' Dr Richard Shepherd, author of *Unnatural Causes* _____ After the tragic loss of his mother, Charlie Corbett felt trapped by his pain. Having lost all hope and perspective he took to the countryside in search of solace. There, he heard the soaring, cascading song of the skylark - a sound that pulled him from the depths of despair and into the calm of the natural world. Weaving his journey through grief with a remarkable portrait of the birds living right on our doorstep, *12 Birds to Save Your Life* is an invitation to stop, step outside, and listen. By following Charlie's path, opening your eyes and ears to what has been there all along, you will discover how nature can set you free.

12 Birds to Save Your Life

In this taut and thrilling debut, an unraveling woman, unhappily childless and recently separated, becomes fixated on her neighbor--the beautiful, famous actress. The unnamed narrator can't help noticing with wry irony that, though she and the actress live just a few doors apart, they are separated by a chasm of professional success and personal fulfillment. When an interaction with the actress at the

annual block party takes a disastrous turn, what began as an innocent preoccupation spirals quickly, and lethally, into a frightening and irretrievable madness.

Looker

Heartwarming and Heart-Opening Stories Gathered from Decades of Medical Practice Bernie Siegel first wrote about miracles when he was a practicing surgeon and founded Exceptional Cancer Patients, a groundbreaking synthesis of group, individual, dream, and art therapy that provided patients with a “carefrontation.” Compiled during his more than thirty years of practice, speaking, and teaching, the stories in these pages are riveting, warm, and belief expanding. Their subjects include a girl whose baby brother helped her overcome anorexia, a woman whose cancer helped her heal by teaching her to stand up for herself, and a family that was saved from a burning house by bats. Without diminishing the reality of pain and hardship, the stories show real people turning crisis into blessing by responding to adversity in ways that empower and heal. They demonstrate what we are capable of and show us that we can achieve miracles as we confront life’s difficulties.

A Book of Miracles

"A ... memoir about how the essential parts of one young woman's early life--her mother's work as a surgeon and her spiritual practice--led her to become a doctor and to question the premise that medicine exists to prolong life at all costs."--

That Good Night

A book of dualities, probing the small spaces between lucidity and madness, desire and ambivalence, the living and the absent. Both an evocation of her love for her husband David Foster Wallace and an act of defiance in the face of devastating loss, *Bough Down* is a lapidary, keenly observed and composed work, awash with the honesty of an open heart.

Bough Down

For Kelly Corrigan, family was everything. At 36 she had a marriage that worked, two healthy kids, & a weekly newspaper column. Yet even as a thriving adult, Kelly still saw herself as her father's daughter. Kelly is shoved into coming-of-age when she finds a lump in her breast & gets the diagnosis no one wants to hear.

The Middle Place

AN INSTANT NEW YORK TIMES BESTSELLER “Sparkling... A sure hit with women’s fiction fans.” —Publishers Weekly Dance till dawn Go skydiving Wear a bikini in public Start living Two best friends jump-start their lives in a summer that will change them forever... Single mom Ellen Fox couldn’t be more content—until she overhears her son saying he can’t go to his dream college because she needs him too much. If she wants him to live his best life, she has to convince him she’s living hers. So Unity Leandre, her best friend since forever, creates a list of challenges to push Ellen out of her comfort zone. Unity will complete the list, too, but not because she needs to change. What’s wrong with a thirtysomething widow still sleeping in her late husband’s childhood bed? The Friendship List begins as a way to make others believe they’re just fine. But somewhere between “wear three-inch heels” and “have sex with a gorgeous guy,” Ellen and Unity discover that life is meant to be lived with joy and abandon, in a story filled with humor, heartache and regrettable tattoos. Don’t miss *The Happiness Plan*, a new novel coming from #1 New York Times bestselling author Susan Mallery where three women experience hope, heartache, and the power of friendship as they search for true happiness!

THE SUNDAY TIMES TOP TEN BESTSELLER SHORTLISTED FOR THE COSTA BIOGRAPHY AWARD 'So very important' NIGELLA LAWSON 'Brilliantly alive' SUNDAY TIMES 'A truly wonderful book. Read it' HENRY MARSH 'Shows us the very best of human nature' ADAM KAY 'Her words are brimful of love, grace and kindness' GUARDIAN As a specialist in palliative medicine, Dr Rachel Clarke chooses to inhabit a place many people would find too tragic to contemplate. Every day, she tries to bring care and comfort to those reaching the end of their lives and to help make dying more bearable. Rachel's training was put to the test in 2017 when her beloved GP father was diagnosed with terminal cancer. She learned that nothing - even the best palliative care - can sugar-coat the pain of losing

someone you love. And yet, she argues, in a hospice there is more of what matters in life - more love, more strength, more kindness, more joy, more tenderness, more grace, more compassion - than you could ever imagine. For if there is a difference between people who know they are dying and the rest of us, it is simply this: that the terminally ill know their time is running out, while we live as though we have all the time in the world. *Dear Life* is a book about the vital importance of human connection, by the doctor we would all want by our sides at a time of crisis. It is a love letter - to a father, to a profession, to life itself.

The Friendship List

An essential guide for students in the life sciences, established researchers, and career counselors, this resource features discussions of job security, future trends, and potential career paths. Even those already working in the industry will find helpful information on how to take advantage of opportunities within their own companies and elsewhere.

Dear Life

In his tell-all, legendary Doors guitarist, Robby Krieger, one of Rolling Stone's "100 Greatest Guitarists of All Time," opens up about his band's meteoric career, his own darkest moments, and the most famous black eye in rock 'n' roll. Few bands are as shrouded in the murky haze of rock mythology as The Doors, and parsing fact from fiction has been a virtually impossible task. But now, after fifty years, The Doors' notoriously quiet guitarist is finally breaking his silence to set the record straight. Through a series of vignettes, Robby Krieger takes readers back to where it all happened: the pawn shop where he bought his first guitar; the jail cell he was tossed into after a teenage drug bust; his parents' living room where his first songwriting sessions with Jim Morrison took place; the empty bars and backyard parties where The Doors played their first awkward gigs; the studios where their iconic songs were recorded; and the many concert venues that erupted into historic riots. *Set the Night on Fire* is packed with never-before-told stories from The Doors' most vital years, and offers a fresh perspective on the most infamous moments of the band's career. Krieger also goes into heartbreaking detail about his life's most difficult struggles, ranging from drug addiction to cancer, but he balances out the sorrow with humorous anecdotes about run-ins with unstable fans, famous musicians, and one really angry monk. *Set the Night on Fire* is at once an insightful time capsule of the '60s counterculture, a moving reflection on what it means to find oneself as a musician, and a touching tale of a life lived non-traditionally. It's not only a must-read for Doors fans, but an essential volume of American pop culture history.

Career Opportunities in Biotechnology and Drug Development

Most of us want and expect medicine's miracles to extend our lives. In today's aging society, however, the line between life-giving therapies and too much treatment is hard to see—it's being obscured by a perfect storm created by the pharmaceutical and biomedical industries, along with insurance companies. In *Ordinary Medicine* Sharon R. Kaufman investigates what drives that storm's "more is better" approach to medicine: a nearly invisible chain of social, economic, and bureaucratic forces that has made once-extraordinary treatments seem ordinary, necessary, and desirable. Since 2002 Kaufman has listened to hundreds of older patients, their physicians and family members express their hopes, fears, and reasoning as they faced the line between enough and too much intervention. Their stories anchor *Ordinary Medicine*. Today's medicine, Kaufman contends, shapes nearly every American's experience of growing older, and ultimately medicine is undermining its own ability to function as a social good. Kaufman's careful mapping of the sources of our health care dilemmas should make it far easier to rethink and renew medicine's goals.

Set the Night on Fire

A member of a sketch comedy group describes growing up with OCD, discussing his pop-culture obsessions, the roles of literature and Christianity in shaping his perspective, and his visit to the OCD Institute in Massachusetts.

Ordinary Medicine

Half Apache and mostly orphaned, the adventures of Edgar Presley Mint begin on an Arizona reservation at the age of seven, when the mailman's jeep accidentally runs over his head. Shunted from the hospital to a reform school to a Mormon foster family, comedy and trouble accompany Edgar

- the irresistible innocent who never truly loses heart, and whose quest for the mailman leads him to an unexpected home. This riveting picaresque novel has become an international best-seller.

Triggered

Described as 'haunting' by Sunday Times, *The Swallowed Man* is a dark reimagining of Pinocchio, told from inside the belly of a fish. 'Profound and delightful' Max Porter, author of *Grief is the Thing with Feathers* I am writing this account, in another man's book, by candlelight, inside the belly of a fish. I have been eaten. I have been eaten, yet I am living still. From the acclaimed author of *Little* comes this beautiful and haunting imagining of the years Geppetto spends within the belly of a sea beast. Drawing upon the Pinocchio story while creating something entirely his own, Carey tells an unforgettable tale of fatherly love and loss, pride and regret, and of the sustaining power of art and imagination.

The Miracle Life Of Edgar Mint

NEW YORK TIMES BESTSELLER • A searing, deeply moving memoir of illness and recovery that traces one young woman's journey from diagnosis to remission to re-entry into "normal" life—from the author of the *Life, Interrupted* column in *The New York Times* **ONE OF THE BEST BOOKS OF THE YEAR:** *The New York Times Book Review*, *The Washington Post*, *Bloomberg*, *The Rumpus*, *She Reads*, *Library Journal*, *Booklist* • "I was immersed for the whole ride and would follow Jaouad anywhere. . . . Her writing restores the moon, lights the way as we learn to endure the unknown."—Chanel Miller, *The New York Times Book Review* "Beautifully crafted . . . affecting . . . a transformative read . . . Jaouad's insights about the self, connectedness, uncertainty and time speak to all of us."—*The Washington Post* In the summer after graduating from college, Suleika Jaouad was preparing, as they say in commencement speeches, to enter "the real world." She had fallen in love and moved to Paris to pursue her dream of becoming a war correspondent. The real world she found, however, would take her into a very different kind of conflict zone. It started with an itch—first on her feet, then up her legs, like a thousand invisible mosquito bites. Next came the exhaustion, and the six-hour naps that only deepened her fatigue. Then a trip to the doctor and, a few weeks shy of her twenty-third birthday, a diagnosis: leukemia, with a 35 percent chance of survival. Just like that, the life she had imagined for herself had gone up in flames. By the time Jaouad flew home to New York, she had lost her job, her apartment, and her independence. She would spend much of the next four years in a hospital bed, fighting for her life and chronicling the saga in a column for *The New York Times*. When Jaouad finally walked out of the cancer ward—after countless rounds of chemo, a clinical trial, and a bone marrow transplant—she was, according to the doctors, cured. But as she would soon learn, a cure is not where the work of healing ends; it's where it begins. She had spent the past 1,500 days in desperate pursuit of one goal—to survive. And now that she'd done so, she realized that she had no idea how to live. How would she reenter the world and live again? How could she reclaim what had been lost? Jaouad embarked—with her new best friend, Oscar, a scruffy terrier mutt—on a 100-day, 15,000-mile road trip across the country. She set out to meet some of the strangers who had written to her during her years in the hospital: a teenage girl in Florida also recovering from cancer; a teacher in California grieving the death of her son; a death-row inmate in Texas who'd spent his own years confined to a room. What she learned on this trip is that the divide between sick and well is porous, that the vast majority of us will travel back and forth between these realms throughout our lives. *Between Two Kingdoms* is a profound chronicle of survivorship and a fierce, tender, and inspiring exploration of what it means to begin again.

The Swallowed Man

Addresses the universal question of how we can achieve meaningful lives and peaceful deaths. The Dalai Lama says we must learn to cultivate compassion and positive thoughts and actions.

Between Two Kingdoms

As imaginary friends go, Budo is lucky -- he's been alive for more than five years. But Budo feels his age, and thinks about the day when eight-year-old Max Delaney will stop believing in him. Some say Max has Asperger's Syndrome; most just say he's "on the spectrum." None of this matters to Budo, who loves Max and is charged with protecting him from bullying. But he can't protect Max from Mrs. Patterson in the Learning Center, who does the unthinkable . . .

The Joy of Living and Dying in Peace

PLEASE NOTE: This is a summary, analysis and review of the book and not the original book. Nina Riggs' heartbreakingly beautiful book, "The Bright Hour" recounts the small moments of her long journey with cancer, both watching it take her mother's life and the path from her own diagnosis to her deathbed. This SUMOREADS Summary & Analysis offers chapter synopses and analysis to help you understand the arc of grief, pain, and mortality, while providing a way to find beauty, solace, and even hope in those moments. This SUMOREADS Summary & Analysis offers supplementary material to "The Bright Hour" to help you distill the key takeaways, review the book's content, and further understand the writing style and overall themes from an editorial perspective. Whether you'd like to deepen your understanding, refresh your memory, or simply decide whether or not this book is for you, SUMOREADS Summary & Analysis is here to help. Absorb everything you need to know in under 20 minutes! What does this SUMOREADS Summary & Analysis Include? An Executive Summary of the original book Editorial Review Brief chapter-by-chapter summaries A short bio of the the author Original Book Summary Overview Nina Riggs' "The Bright Hour: A Memoir of Living and Dying" is a poignant, insightful, and eloquently written book about the author's journey to live well in the face of certain death. A hauntingly beautiful and honest account of a mother and wife's search to find meaning within her struggle with cancer. While this book is certainly relevant to anyone who is, or has a family member, suffering from cancer, Nina's appreciation for the tiniest moments in life can offer a new perspective to anyone who chooses to read her book. BEFORE YOU BUY: The purpose of this SUMOREADS Summary & Analysis is to help you decide if it's worth the time, money and effort reading the original book (if you haven't already). SUMOREADS has pulled out the essence-but only to help you ascertain the value of the book for yourself. This analysis is meant as a supplement to, and not a replacement for, "The Bright Hour."

* INSTANT NEW YORK TIMES BESTSELLER * "Stunning...heartrending...this year's When Breath Becomes Air." -Nora Krug, The Washington Post "Beautiful and haunting." -Matt McCarthy, MD, USA TODAY "Deeply affecting...simultaneously heartbreaking and funny." -People (Book of the Week)

Memoirs of an Imaginary Friend

This timely collection of essays by leading international scholars across religious studies and the environmental humanities advances a lively discussion on materialism in its many forms. While there is little agreement on what 'materialism' means, it is evident that there is a resurgence in thinking about matter in more animated and active ways. The volume explores how debates concerning the new materialisms impinge on religious traditions and the extent to which religions, with their material culture and beliefs in the Divine within the material, can make a creative contribution to debates about ecological materialisms. Spanning a broad range of themes, including politics, architecture, hermeneutics, literature and religion, the book brings together a series of discussions on materialism in the context of diverse methodologies and approaches. The volume investigates a range of issues including space and place, hierarchy and relationality, the relationship between nature and society, human and other agencies, and worldviews and cultural values. Drawing on literary and critical theory, and queer, philosophical, theological and social theoretical approaches, this ground-breaking book will make an important contribution to the environmental humanities. It will be a key read for postgraduate students, researchers and scholars in religious studies, cultural anthropology, literary studies, philosophy and environmental studies.

Summary of Nina Riggs' the Bright Hour

A broken back. A devastating diagnosis. A plea for death. Then, an awakening. When Maryse stands from her couch one morning and eight of her vertebrae collapse, she soon discovers the heartbreaking reason: an incurable cancer that "eats" bones from the inside out until they break. And just as things seem to stabilize, she's diagnosed with breast cancer, a repeat for her. While she seesaws between the gargantuan world of oncology, alternative treatments, and what some would call woowoo cures, we meander with her into what it takes to truly heal, beginning at the elemental level. Who the F*ck Says We Have Tomorrow? How I made cancer my bitch! deep dives into the complete rehabbing of the author's life, including the route she took to keep herself healthy despite living with an incurable cancer, and how she expanded her life by shrinking it. If you enjoy learning some unusual ways others used in their healing journeys, perhaps to enhance your own, be it emotional or physical, you'll love this extraordinary, and sometimes funny account of how one woman tore apart and completely redesigned

all aspects of her life. She achieved it with a ménage à trois of traditional treatments, alternative medicine, and woowoo healing protocols related to spirituality, and despite pushback from all sides of the medical divide. Get Who the F*ck Says We Have Tomorrow? How I made cancer my bitch! today for the inspiring tears-to-laughter-and-back intriguing story of how one woman turned cancer and death on their heads and found a way to thrive!

The Bright Hour

In this collection, authors transgress and uphold their maternal integrity as they dance at the edge of comfort and take up the challenge of exploring the boundaries of maternal practice— their own, their mothers, and those found in literature, media, or popular culture. These mothers assume a hopeful stance; actively choose courage over comfort; push through what is fun, fast, or easy, and show how they come to mother outside the lines in all its simplicity and complexity. As they bust outdated, tired, and ambiguous boundaries, they find and (re)set new boundaries that restore dignity and self-respect for themselves, their children, their families, and for the matricentric feminist collective, particularly those whose voices may continue to be silenced and marginalized by structures and limits beyond their control. Thirteen stories are threaded together to form a compelling tale showing how and why some mothers, when faced with ambiguous and untenable boundaries, resist the urge to accept the assumed, the unpredictable, even the demanded— whether they be internal or external, visible or invisible, real or imaginary.

Snowball Earth

The riveting story of Earth's first ice age and the scientist who discovered it 'An engrossing book on the emergence of a stunning new account of events on our primordial planet ... fascinating' Sunday Telegraph 'This is a story worth telling ... Walker is an ideal person to tell it ... Racy and pacy, with a focus on the people involved ... A very entertaining read' Independent 'Did the Earth once undergo a super ice age, one that froze the entire planet? A global adventure story and a fascinating account of scientist Paul Hoffman's quest to prove his maverick 'Snowball Earth' theory, this is science writing at its

most gripping. In SNOWBALL EARTH, Gabrielle Walker takes us on a thrilling natural history expedition in search of supporting evidence for the audacious theory which argues that the Earth experienced a climatic cataclysm 600 million years ago that froze the entire planet from the poles to the equator. Because the global snowball happened so long ago the ice has now long gone - but it left its traces in rocks around the world and in order to see the evidence, Walker visited such places as Australia, Namibia, South Africa and Death Valley, USA. Part adventure story and part travel book, it's a tale of the ultimate human endeavour to understand our origins.

Snowball Earth

Did the Earth once undergo a super ice age, one that froze the entire planet? A global adventure story and a fascinating account of scientist Paul Hoffman's quest to prove his maverick Snowball Earth theory, this is science writing at its most gripping. In Snowball Earth, Gabrielle Walker takes us on a thrilling natural history expedition in search of supporting evidence for the audacious theory which argues that the Earth experienced a climatic cataclysm 600 million years ago that froze the entire planet from the poles to the equator. Because the global snowball happened so long ago the ice has now long gone - but it left its traces in rocks around the world and in order to see the evidence, Walker visited such places as Australia, Namibia, South Africa and Death Valley, USA. Part adventure story and part travel book, it's a tale of the ultimate human endeavour to understand our origins.

Global Catastrophes: A Very Short Introduction

Life on earth will come to an end. It's just a matter of when. Global Catastrophes: A Very Short Introduction focuses on the many potential catastrophes facing our planet and our species in the future, and looks at both the probability of these events happening and our chances of survival. Coverage extends from discussion of the likely consequences of the current global warming to the inevitable destruction of the earth in the far future, when it is enveloped by our giant, bloated sun. In between, other 'end of the world scenarios' will be examined, including the New Ice Age, asteroid and comet impact, supervolcanoes, and mega-tsunamis. ABOUT THE SERIES: The Very Short Introductions series from Oxford University Press contains hundreds of titles in almost every subject area. These pocket-sized books are the perfect way to get ahead in a new subject quickly. Our expert authors combine facts, analysis, perspective, new ideas, and enthusiasm to make interesting and challenging topics highly readable.

Paleoclimatology

Life on our planet depends upon having a climate that changes within narrow limits – not too hot for the oceans to boil away nor too cold for the planet to freeze over. Over the past billion years Earth's average temperature has stayed close to 14-15°C, oscillating between warm greenhouse states and cold icehouse states. We live with variation, but a variation with limits. Paleoclimatology is the science of understanding and explaining those variations, those limits, and the forces that control them. Without that understanding we will not be able to foresee future change accurately as our population grows. Our impact on the planet is now equal to a geological force, such that many geologists now see us as living in a new geological era – the Anthropocene. Paleoclimatology describes Earth's passage through the greenhouse and icehouse worlds of the past 800 million years, including the glaciations of Snowball Earth in a world that was then free of land plants. It describes the operation of the Earth's thermostat, which keeps the planet fit for life, and its control by interactions between greenhouse gases, land plants, chemical weathering, continental motions, volcanic activity, orbital change and solar variability. It explains how we arrived at our current understanding of the climate system, by reviewing the contributions of scientists since the mid-1700s, showing how their ideas were modified as science progressed. And it includes reflections based on the author's involvement in palaeoclimatic research. The book will transform debate and set the agenda for the next generation of thought about future climate change. It will be an invaluable course reference for undergraduate and postgraduate students in geology, climatology, oceanography and the history of science. "A real tour-de-force! An outstanding summary not only of the science and what needs to be done, but also the challenges that are a consequence of psychological and cultural baggage that threatens not only the survival of our own species but the many others we are eliminating as well." Peter Barrett Emeritus Professor of Geology, Antarctic Research Centre, Victoria University of Wellington, New Zealand "What a remarkable and wonderful synthesis... it will be a wonderful source of [paleoclimate]

information and insights." Christopher R. Scotese Professor, Department of Earth and Planetary Sciences, Northwestern University, Evanston, IL, USA

Climate Change and the Course of Global History

The first global study by a historian to fully integrate the earth-system approach of the new climate science with the material history of humanity.

Frozen Earth

In this engrossing and accessible book, Doug Macdougall explores the causes and effects of ice ages that have gripped our planet throughout its history, from the earliest known glaciation—nearly three billion years ago—to the present. Following the development of scientific ideas about these dramatic events, Macdougall traces the lives of many of the brilliant and intriguing characters who have contributed to the evolving understanding of how ice ages come about. As it explains how the great Pleistocene Ice Age has shaped the earth's landscape and influenced the course of human evolution, *Frozen Earth* also provides a fascinating look at how science is done, how the excitement of discovery drives scientists to explore and investigate, and how timing and chance play a part in the acceptance of new scientific ideas. Macdougall describes the awesome power of cataclysmic floods that marked the melting of the glaciers of the Pleistocene Ice Age. He probes the chilling evidence for "Snowball Earth," an episode far back in the earth's past that may have seen our planet encased in ice from pole to pole. He discusses the accumulating evidence from deep-sea sediment cores, as well as ice cores from Greenland and the Antarctic, that suggests fast-changing ice age climates may have directly impacted the evolution of our species and the course of human migration and civilization. *Frozen Earth* also chronicles how the concept of the ice age has gripped the imagination of scientists for almost two centuries. It offers an absorbing consideration of how current studies of Pleistocene climate may help us understand earth's future climate changes, including the question of when the next glacial interval will occur.

Earth

"It's impossible to grasp the whole planet or integrate all the descriptions of it. But because we live here, we have to try. This is not just an artistic compulsion or an existential yearning, still less an academic exercise. It's a survival issue. This is the only planet we have. We're stuck here, and we don't own the place—it would be the height of arrogance to assume that we do. We're tenants here, not owners, but we're tenants with hope for a long-term tenancy. We want to extend our lease just as far as we can."—from *Earth: A Tenant's Manual* In *Earth: A Tenant's Manual*, the distinguished geologist Frank H. T. Rhodes, President Emeritus of Cornell University, provides a sweeping, accessible, and deeply informed guide to the home we all share, showing us how we might best preserve the Earth's livability for ourselves and future generations. Rhodes begins by setting the scene for our active planet and explaining how its location and composition determine how the Earth works and why it teems with life. He emphasizes the changes that are of concern to us today, from earthquakes to climate change and the clashes over the energy resources needed for the Earth's exploding population. He concludes with an extended exploration of humanity's prospects on a complex, protean, and ultimately finite world. It is not a question of whether the planet is sustainable; the challenge facing life on Earth—and the life of the Earth—is whether an expanding and high-consumption species like ours is sustainable. Only new resources, new priorities, new policies and, most of all, new knowledge, can reverse the damage that humanity is doing to our home—and ourselves. A sustainable human future, Rhodes concludes in this eloquent, sobering, but ultimately optimistic book, will require a sense of responsible stewardship, for we are not owners of this planet; we are tenants. Surveying the systems, large and small, that govern Earth's processes and influence its changes, Rhodes addresses the negative consequences of human activities for the health of its regulatory systems but offers practical suggestions as to how we might effect repairs, or at least limit further damage to our home.

Topics in Mathematical Modeling

Topics in Mathematical Modeling is an introductory textbook on mathematical modeling. The book teaches how simple mathematics can help formulate and solve real problems of current research interest in a wide range of fields, including biology, ecology, computer science, geophysics, engineering, and the social sciences. Yet the prerequisites are minimal: calculus and elementary differential equations. Among the many topics addressed are HIV; plant phyllotaxis; global warming; the World Wide Web;

plant and animal vascular networks; social networks; chaos and fractals; marriage and divorce; and El Niño. Traditional modeling topics such as predator-prey interaction, harvesting, and wars of attrition are also included. Most chapters begin with the history of a problem, follow with a demonstration of how it can be modeled using various mathematical tools, and close with a discussion of its remaining unsolved aspects. Designed for a one-semester course, the book progresses from problems that can be solved with relatively simple mathematics to ones that require more sophisticated methods. The math techniques are taught as needed to solve the problem being addressed, and each chapter is designed to be largely independent to give teachers flexibility. The book, which can be used as an overview and introduction to applied mathematics, is particularly suitable for sophomore, junior, and senior students in math, science, and engineering.

Frozen Earth

Explores the causes and effects of ice ages, explains how the Pleistocene Ice Age has shaped the earth's landscape and influenced human evolution, and offers authoritative speculation and explanations of future climate changes, their causes, and their impact on both the natural world and human civilization.

The Story of Earth's Climate in 25 Discoveries

Over 4.5 billion years, Earth's climate has transformed tremendously. Before our more temperate recent past, the planet swung from one extreme to another—from a greenhouse world of sweltering temperatures and high sea levels to a “snowball earth” in which glaciers reached the equator. During this history, we now know, living things and the climate have always influenced and even shaped each other. But the climate has never changed as rapidly or as drastically as it has since the Industrial Revolution. In this lively and entertaining book, Donald R. Prothero explores the astonishing connections between climate and life through the ages, telling the remarkable stories of the scientists who made crucial discoveries. Journeying through the intertwined evolution of climate and life, he tackles questions such as: Why do we have phytoplankton to thank for the air we breathe? What kind of climate was necessary for the rise of the dinosaurs—or the mammals, their successors? When and how have climatic changes caused mass extinctions? Prothero concludes with the Ice Ages and the Holocene, the role of climate in human history, and the perils of anthropogenic climate change. Understanding why the climate has changed in the past, this timely book shows, is essential to grasping the gravity of how radically human activity is altering the climate today.

Astrobiological Neurosystems

This book explains why scientists believe that life may be more common in the Universe than previously considered possible. It presents the tools and strategies astronomers and astrobiologists are using in their formal search for habitable exoplanets as well as more advanced forms of life in other parts of our galaxy. The author then summarizes what is currently known about how and where organic molecules critical to our form of carbon-based life are manufactured. The core of the book explains (and presents educated guesses) how nervous systems evolved on Earth, how they work, and how they might work on other worlds. Combining his knowledge of neuroscience, computers, and astrobiology the author jumps into the discussion whether biological nervous systems are just the first step in the rise of intelligence in the Universe. The book ends with a description from both the psychologist's and the neuroscientist's viewpoints, exactly what it is about the fields of astrobiology and astronomy that “boggles the minds” of many amateur astronomers and interested non-scientists. This book stands out from other popular science books on astrobiology by making the point that “astro-neurobiologists” need to begin thinking about how alien nervous systems might work.

Global Land Ice Measurements from Space

An international team of over 150 experts provide up-to-date satellite imaging and quantitative analysis of the state and dynamics of the glaciers around the world, and they provide an in-depth review of analysis methodologies. Includes an e-published supplement. Global Land Ice Measurements from Space - Satellite Multispectral Imaging of Glaciers (GLIMS book for short) is the leading state-of-the-art technical and interpretive presentation of satellite image data and analysis of the changing state of the world's glaciers. The book is the most definitive, comprehensive product of a global glacier remote sensing consortium, Global Land Ice Measurements from Space (GLIMS, <http://www.glims.org>). With 33 chapters and a companion e-supplement, the world's foremost experts in satellite image analysis of

glaciers analyze the current state and recent and possible future changes of glaciers across the globe and interpret these findings for policy planners. Climate change is with us for some time to come, and its impacts are being felt by the world's population. The GLIMS Book, to be released about the same time as the IPCC's 5th Assessment report on global climate warming, buttresses and adds rich details and authority to the global change community's understanding of climate change impacts on the cryosphere. This will be a definitive and technically complete reference for experts and students examining the responses of glaciers to climate change. World experts demonstrate that glaciers are changing in response to the ongoing climatic upheaval in addition to other factors that pertain to the circumstances of individual glaciers. The global mosaic of glacier changes is documented by quantitative analyses and are placed into a perspective of causative factors. Starting with a Foreword, Preface, and Introduction, the GLIMS book gives the rationale for and history of glacier monitoring and satellite data analysis. It includes a comprehensive set of six "how-to" methodology chapters, twenty-five chapters detailing regional glacier state and dynamical changes, and an in-depth summary and interpretation chapter placing the observed glacier changes into a global context of the coupled atmosphere-land-ocean system. An accompanying e-supplement will include oversize imagery and other other highly visual renderings of scientific data.

Why Geology Matters

Volcanic dust, climate change, tsunamis, earthquakes—geoscience explores phenomena that profoundly affect our lives. But more than that, as Doug Macdougall makes clear, the science also provides important clues to the future of the planet. In an entertaining and accessibly written narrative, Macdougall gives an overview of Earth's astonishing history based on information extracted from rocks, ice cores, and other natural archives. He explores such questions as: What is the risk of an asteroid striking Earth? Why does the temperature of the ocean millions of years ago matter today? How are efforts to predict earthquakes progressing? Macdougall also explains the legacy of greenhouse gases from Earth's past and shows how that legacy shapes our understanding of today's human-caused climate change. We find that geoscience in fact illuminates many of today's most pressing issues—the availability of energy, access to fresh water, sustainable agriculture, maintaining biodiversity—and we discover how, by applying new technologies and ideas, we can use it to prepare for the future.

Fossils

Discusses the formation of fossils, describes how they are used by scientists to reconstruct the history of the earth, and offers guidance on starting a fossil collection.

Lost Animals

Meet the incredible animals that have disappeared due to competition, mass extinctions, hunting, and human activity. Lost Animals brings back to life some of the most charismatic creatures to inhabit the planet. It captures the imagination with more than 200 incredible photographs, artworks of fossils, and scientific drawings of charming creatures like dodos, paraceratherium (the largest land mammal), spinosaurus (the biggest carnivorous dinosaur), placoderm fishes (the sharks of their day), and more! Lost Animals is a captivating documentation of evolution and extinction. Each chapter focuses on a specific time in Earth's history, from the Cambrian explosion (the most intense surge of evolution the world has ever experienced) to present times, with profiles of the key species that lived then. From long extinct animals to Lazarus species--animals that were thought to be extinct before being rediscovered--this book takes readers on a journey through Earth's natural history, highlighting the world's biggest animal losses and its moments of conservational hope.

The Climate Modelling Primer

As a consequence of recent increased awareness of the social and political dimensions of climate, many non-specialists discover a need for information about the variety of available climate models. A Climate Modelling Primer, Fourth Edition is designed to explain the basis and mechanisms of all types of current physically-based climate models. A thoroughly revised and updated edition, this book will assist the reader in understanding the complexities and applicabilities of today's wide range of climate models. Topics covered include the latest techniques for modelling the coupled biosphere-ocean-atmosphere system, information on current practical aspects of climate modelling and ways to evaluate and exploit the results, discussion of Earth System Models of Intermediate Complexity (EMICs), and interactive exercises based on Energy Balance Model (EBM) and the Daisyworld model. Source codes and results

from a range of model types allows readers to make their own climate simulations and to view the results of the latest high resolution models. Now in full colour throughout and with the addition of cartoons to enhance student understanding the new edition of this successful textbook enables the student to tackle the difficult subject of climate modeling.

The Story of the Earth in 25 Rocks

Every rock is a tangible trace of the earth's past. The Story of the Earth in 25 Rocks tells the fascinating stories behind the discoveries that shook the foundations of geology. In twenty-five chapters—each about a particular rock, outcrop, or geologic phenomenon—Donald R. Prothero recounts the scientific detective work that shaped our understanding of geology, from the unearthing of exemplary specimens to tectonic shifts in how we view the inner workings of our planet. Prothero follows in the footsteps of the scientists who asked—and answered—geology's biggest questions: How do we know how old the earth is? What happened to the supercontinent Pangea? How did ocean rocks end up at the top of Mount Everest? What can we learn about our planet from meteorites and moon rocks? He answers these questions through expertly chosen case studies, such as Pliny the Younger's firsthand account of the eruption of Vesuvius; the granite outcrops that led a Scottish scientist to theorize that the landscapes he witnessed were far older than Noah's Flood; the salt and gypsum deposits under the Mediterranean Sea that indicate that it was once a desert; and how trying to date the age of meteorites revealed the dangers of lead poisoning. Each of these breakthroughs filled in a piece of the greater puzzle that is the earth, with scientific discoveries dovetailing with each other to offer an increasingly coherent image of the geologic past. Summarizing a wealth of information in an entertaining, approachable style, The Story of the Earth in 25 Rocks is essential reading for the armchair geologist, the rock hound, and all who are curious about the earth beneath their feet.

Encyclopedia of Anthropology

Collects 1,000 entries on the subfields on anthropology, including physical anthropology, archaeology, paleontology, linguistics, and evolution.

Big History and the Future of Humanity

big history and the future of humanity "This remains the best single attempt to theorize big history as a discipline that can link core concepts and paradigms across all historical disciplines, from cosmology to geology, from biology to human history. With additional and updated material, the Second Edition also offers a fine introduction to the history of big history and a superb introductory survey to the big history story. Essential reading for anyone interested in a rapidly evolving new field of scholarship that links the sciences and the humanities into a modern, science-based origin story." David Christian, Macquarie University "Notable for its theoretic approach, this new Second Edition is both an indispensable contribution to the emerging big history narrative and a powerful university textbook. Spier defines words carefully and recognizes the limits of current knowledge, aspects of his own clear thinking." Cynthia Brown, Emerita, Dominican University of California Reflecting the latest theories in the sciences and humanities, this new edition of Big History and the Future of Humanity presents an accessible and original overview of the entire sweep of history from the origins of the universe and life on Earth up to the present day. Placing the relatively brief period of human history within a much broader framework – one that considers everything from vast galaxy clusters to the tiniest sub-atomic particles – big history is an innovative theoretical approach that opens up entirely new multidisciplinary research agendas. Noted historian Fred Spier reveals how a thorough examination of patterns of complexity can offer richer insights into what the future may have in store for humanity. The second edition includes new learning features, such as highlighted scientific concepts, an illustrative timeline and comprehensive glossary. By exploring the cumulative history from the Big Bang to the modern day, Big History and the Future of Humanity, Second Edition, sheds important historical light on where we have been – and offers a tantalizing glimpse of what lies ahead.

Deep Time Analysis

Using a series of case studies, the book demonstrates the power of dynamic analysis as applied to the fossil record. The book considers how we think about certain types of paleontological questions and shows how to answer them. The analytical tools presented here will have wide application to other fields of knowledge; as such the book represents a major contribution to the deployment of modern scientific method as it builds on author's previous book, Dynamic Paleontology. Students and seasoned

professionals alike will find this book to be of great utility for refining their approach to their ongoing and future research projects.

Insignificant but Special

Life is a rarity. We know of no other planet where life exists other than on Earth. Life started out in a most simple form, then proceeded along a labyrinth of evolutionary pathways that resulted in extraordinary and unfathomable designs. This is a journey, from the beginning of time to this very day, guided by circumstances, contingencies, and chaos that has governed Earth's living assemblage. But life's presence was not destined to just happen. If it wasn't for our moon, which gave Earth orbital and rotational stability, life would not be as we know it today. If it wasn't for volcanic eruptions, Earth would be an ice-clad, frozen globe. If it wasn't for one of the tiniest of living organisms that produced a toxic gas, complex life would not have arisen. If it wasn't for one particular extinction event, Homo sapiens would not be walking this planet, and you would not be reading this now. If it wasn't for a million other things, life would be much different, or not at all. Earth made life, from the meek to the monstrous, from the banal to the bizarre, from the humblest to the haughtiest. Strap yourself in alongside a window seat and witness the passing of time, to view the episodes of change, and how the making of life became the greatest story on Earth.

Our Magnetic Earth

For the general public, magnetism often seems more the province of new age quacks, movie mad scientists, and grade-school teachers than an area of actual, ongoing scientific inquiry. But as Ronald T. Merrill reveals in *Our Magnetic Earth*, geomagnetism really is an enduring, vibrant area of science, one that offers answers to some of the biggest questions about our planet's past—and maybe even its future.

A Climate Modelling Primer

As a consequence of recent increased awareness of the social and political dimensions of climate, many non-specialists discover a need for information about the variety of available climate models. *A Climate Modelling Primer*, Third Edition explains the basis and mechanisms of all types of current physically-based climate models. A thoroughly revised and updated edition, this book assists the reader in understanding the complexities and applicabilities of today's wide range of climate models. Topics covered include the latest techniques for modelling the coupled biosphere-ocean-atmosphere system, information on current practical aspects of climate modelling and ways to evaluate and exploit the results, discussion of Earth System Models of Intermediate Complexity (EMICs), and interactive exercises based on Energy Balance Model (EBM) and the Daisyworld model. Source codes and results from a range of model types allows readers to make their own climate simulations and to view the results of the latest high resolution models. The accompanying CD contains: A suite of resources for those wishing to learn more about climate modelling. A range of model visualisations. Data from climate models for use in the classroom. Windows and Macintosh programs for an Energy Balance Model. Selected figures from the book for inclusion in presentations and lectures. Suitable for 3rd/4th year undergraduates taking courses in climate modelling, economic forecasting, computer science, environmental science, geography and oceanography. Also of relevance to researchers and professionals working in related disciplines with climate models or who need accessible technical background to climate modelling predictions.

Discovering Our World

Where did everything come from? Why are humans so biologically similar, and why do we let small differences divide us? What shall determine our destiny? Paul Singh and John R. Shook draw on the latest findings from the physical and biological sciences, astronomy and cosmology, geology and genetics, and prehistory and archeology in search of answers. As they lucidly and engagingly demonstrate, the answers science gives about ourselves and the universe in which we live are incomparably more surprising and interesting than any mythical tale about some clash of titans or calculating creator. Indeed, science's proud journey of exploration and discovery is humanity's finest narrative yet, about how we trusted our intelligence to find out what we really are and who we can be—intrepidly going wherever the evidence led. Even though science reveals that humanity may have no special place in the universe, humanity is truly special because of our ability to comprehend our universe. Thus, this inspiring story of exploration and discovery is a celebration not only of science—of

science's knowledge of the world, and of science's own journeys to gain that knowledge—but also of ourselves.

Microwave Remote Sensing Tools in Environmental Science

This book gives new insight to the study of the global environmental changes using the ecoinformatics and microwave remote sensing tools together with the adaptive-evolutionary technology of geoinformation monitoring. The main advantage of this book consists in the accumulation of the interdisciplinary scientific knowledge for the parameterization of the global biogeochemical cycles and other environmental processes in the context of globalization and sustainable development. In this regard, the crucial global problems of the dynamics of the climate-nature-society system have been considered and the key problems of ensuring its sustainable development have been addressed. An analysis of the present trend in changing ecological systems has been discussed, including different types of forest ecosystems and ocean aquatories. The emphasis has been given to the accomplishment of the global geoinformation monitoring, which could provide a reliable control of the environmental processes development with reliable prognostic estimates of the consequences of human activities. A new approach to the numerical modelling of the climate-nature-society system has been presented and demonstrative results have been given about the modelling of the dynamics of this system's characteristics, in cases of realization of some scenarios of the anthropogenic impacts to the biogeochemical cycles, the land ecosystems and oceans. Methods and algorithms for the big data manipulation and processing in the remote sensing environmental monitoring systems have been described.

International Law and the Genetic Resources of the Deep Sea

Deep-sea genetic resources and the interest of the biotechnology industry in their exploitation are emerging as a significant challenge for international oceans governance. This book is the first comprehensive examination of this issue and explores its relationship with marine scientific research and other activities in the deep sea. As well as a detailed survey of the state of industry interest in this new field of biotechnology it also sets out proposals for future sustainable management of these resources utilizing many existing international law and policy regimes.

Origins

"Fossils are the fragments from which, piece by laborious piece, the great mosaic of the history of life has been constructed. Here and there, we can supplement these meager scraps by the use of biochemical markers or geochemical signatures that add useful information, but, even with such additional help, our reconstructions and our models of descent are often tentative. For the fossil record is, as we have seen, as biased as it is incomplete. But fragmentary, selective, and biased though it is, the fossil record, with all its imperfections, is still a treasure. Though whole chapters are missing, many pages lost, and the earliest pages so damaged as to be, as yet, virtually unreadable, this—the greatest biography of all—is one in whose closing pages we find ourselves."—from *Origins* In *Origins*, Frank H. T. Rhodes explores the origin and evolution of living things, the changing environments in which they have developed, and the challenges we now face on an increasingly crowded and polluted planet. Rhodes argues that the future well-being of our burgeoning population depends in no small part on our understanding of life's past, its long and slow development, and its intricate interdependencies. Rhodes's accessible and extensively illustrated treatment of the origins narrative describes the nature of the search for prehistoric life, the significance of geologic time, the origin of life, the emergence and spread of flora and fauna, the evolution of primates, and the emergence of modern humans.

An Introduction to Biology for Everyone

In 2015 a conference on "Rediscovering the Spiritual in God's Creation" was held at the Serafino winery complex in the McLaren Vale region of South Australia. The aim of the conference was not to seek consensus but to survey the landscape with a view to intentional responsible action in caring for God's creation. Delegates were challenged to recognize their own worldviews and to widen their horizons to encompass the enormity of the transcendence and immanence of God's presence in all creation. A group of leading international scholars and experts in the fields of science, ecology, theology, and ethics participated in a multidisciplinary conversation on the spiritual in creation, with the aim of discovering fresh horizons with regard to creation care, liturgy, justice, and discipleship within the Christian community. The chapters in this volume reflect the diversity of perspectives summarized

in The Serafino Declaration, which was crafted towards the end of the conference. This declaration (which opens the volume) outlines a range of views relating to the presence of the spiritual in creation, views that are both traditional and radical. This volume highlights the current concern over ecological destruction and finds sources of inspiration in the deepest roots of our traditions and forms of spirituality to sustain efforts towards custodianship of the land and care for God's creation. Contributors: David Rhoads Paul Santmire Denis Edwards Bob White Heather Eaton Ernst Conradie Vicky Balabanski Celia Deane-Drummond Mark Worthing Emily Colgan Dianne Rayson Anne Gardner Mark Liederbach Patricia Fox Anne Elvey Mick Pope

The Nature of Things

Navigating what she calls the "extravagantly rich world of nonfiction," renowned readers' advisor (RA) Wyatt builds readers' advisory bridges from fiction to compelling and increasingly popular nonfiction to encompass the library's entire collection. She focuses on eight popular categories: history, true crime, true adventure, science, memoir, food/cooking, travel, and sports. Within each, she explains the scope, popularity, style, major authors and works, and the subject's position in readers' advisory interviews. Wyatt addresses who is reading nonfiction and why, while providing RAs with the tools and language to incorporate nonfiction into discussions that point readers to what to read next. In easy-to-follow steps, Wyatt Explains the hows and whys of offering fiction and nonfiction suggestions together Illustrates ways to get up to speed fast in nonfiction Shows how to lead readers to a variety of books using her "read-around" and "reading map" strategies Provides tools to build nonfiction subject guides for the collection This hands-on guide includes nonfiction bibliography, key authors, benchmark books with annotations, and core collections. It is destined to become the nonfiction 'bible' for readers' advisory and collection development, helping librarians, library workers, and patrons select great reading from the entire library collection!

The Readers' Advisory Guide to Nonfiction

So much of popular religion is simply a collection of ancient superstitions and old campfire stories. Even Pope Francis has told the Church that God is not a "wizard." God is not our ever-present nanny or "fairy godmother" whose task it is to comfort and protect us, and to shield us from any danger, discomfort, or disappointment. So what, then, really is the point of religion and spiritualism in a modern world? Exploring the concept of religion from an objective, sociological standpoint, "The Comforting Illusion: Lifting the Veil on Organized Religion" aims to somehow reconcile our modern worldviews with ancient spiritual perspectives. By examining religion's direct and indirect effects on practically every part of 21st century society, be they good or bad, "The Comforting Illusion" pulls aside the curtain of our comfortable rituals and compels us to consider the complex facets of a culture that spans millennia.

The Comforting Illusion: Lifting the Veil on Organized Religion

Draws on expertise from psychology, neurology and evolutionary psychology to illuminate the process of spontaneous flashes of human insight, surveying engaging examples from the fields of religion, science, math and art.

Aha!

Climate change is acknowledged to be the major problem currently facing the human race, and the need to reduce our carbon footprint becomes ever more urgent as the scientific predictions of the effects of climate change become increasingly dire. Whether we are fully aware of the social and political consequences of striving for a significant reduction is more questionable. The Carbon Footprint Wars identifies the many dangers inherent in the projected solutions - such as retreating from the spread of globalization, the current socio-economic paradigm for world trade. The war of words that is being waged over the appropriate way to deal with our collective carbon footprint has critical implications for us all. Stuart Sim examines the issues in detail, raising questions about the assumptions being made on both sides of the climate change divide. He argues that we must urgently address the problem of how to engineer the best possible trade-off between economic survival and ecological disaster - and he puts forward some radical suggestions about how we should set about doing so.

Carbon Footprint Wars

An internationally recognized scientist shows that Earth's separate continents, once together in Pangea, are again on a collision course. You've heard of Pangea, the single landmass that broke apart some 175 million years ago to give us our current continents, but what about its predecessors, Rodinia or Columbia? These "supercontinents" from Earth's past provide evidence that land repeatedly joins and separates. While scientists debate what that next supercontinent will look like—and what to name it—they all agree: one is coming. In this engaging work, geophysicist Ross Mitchell invites readers to remote (and sometimes treacherous) lands for evidence of past supercontinents, delves into the phenomena that will birth the next, and presents the case for the future supercontinent of Amasia, defined by the merging of North America and Asia. Introducing readers to plate tectonic theory through fieldwork adventures and accessible scientific descriptions, Mitchell considers flows deep in the Earth's mantle to explain Amasia's future formation and shows how this developing theory can illuminate other planetary mysteries. He then poses the inevitable question: how can humanity survive the intervening 200 million years necessary to see Amasia? An expert on the supercontinent cycle, Mitchell offers readers a front-row seat to a slow-motion mystery and an ongoing scientific debate.

The Next Supercontinent

Mathematical Geoscience is an expository textbook which aims to provide a comprehensive overview of a number of different subjects within the Earth and environmental sciences. Uniquely, it treats its subjects from the perspective of mathematical modelling with a level of sophistication that is appropriate to their proper investigation. The material ranges from the introductory level, where it can be used in undergraduate or graduate courses, to research questions of current interest. The chapters end with notes and references, which provide an entry point into the literature, as well as allowing discursive pointers to further research avenues. The introductory chapter provides a condensed synopsis of applied mathematical techniques of analysis, as used in modern applied mathematical modelling. There follows a succession of chapters on climate, ocean and atmosphere dynamics, rivers, dunes, landscape formation, groundwater flow, mantle convection, magma transport, glaciers and ice sheets, and sub-glacial floods. This book introduces a whole range of important geoscientific topics in one single volume and serves as an entry point for a rapidly expanding area of genuine interdisciplinary research. By addressing the interplay between mathematics and the real world, this book will appeal to graduate students, lecturers and researchers in the fields of applied mathematics, the environmental sciences and engineering.

Mathematical Geoscience

The debate between divine action, or faith, and natural selection, or science, is garnering tremendous interest. This book ventures well beyond the usual, contrasting American Protestant and atheistic points of view, and also includes the perspectives of Jews, Muslims, and Roman Catholics. It contains arguments from the various proponents of intelligent design, creationism, and Darwinism, and also covers the sensitive issue of how to incorporate evolution into the secondary school biology curriculum. Comprising contributions from prominent, award-winning authors, the book also contains dialogs following each chapter to provide extra stimulus to the readers and a full picture of this 'hot' topic, which delves into the fundamentals of science and religion.

Divine Action and Natural Selection

This book provides new insights on the study of global environmental changes using the ecoinformatics tools and the adaptive-evolutionary technology of geoinformation monitoring. The main advantage of this book is that it gathers and presents extensive interdisciplinary expertise in the parameterization of global biogeochemical cycles and other environmental processes in the context of globalization and sustainable development. In this regard, the crucial global problems concerning the dynamics of the nature-society system are considered and the key problems of ensuring the system's sustainable development are studied. A new approach to the numerical modeling of the nature-society system is proposed and results are provided on modeling the dynamics of the system's characteristics with regard to scenarios of anthropogenic impacts on biogeochemical cycles, land ecosystems and oceans. The main purpose of this book is to develop a universal guide to information-modeling technologies for assessing the function of environmental subsystems under various climatic and anthropogenic conditions.

New Ecoinformatics Tools in Environmental Science

The key novelty of this book is first of all in the successful attempt to conduct jointly modeling of environment in terms of physical environment related parameters and measuring similar parameters by means of multispectral remote sensing, primarily by means of passive microwave remote sensing technology. Another new step is in the development and utilization of a multilevel approach which includes remote sensing of the land and water parameters like soil moisture, depth to water table, biomass of vegetation, temperature and salinity of water, in situ measurements of similar parameters and incorporation of GIS and data sets into the models of typical environments. The part of book, which contains remote sensing is focused on multipurpose observations from aircraft obtained in many soil-climatic zones in different countries and is reach of the examples of practical application. Applied mathematicians, geophysics, hydrologists, socio-economists, statesmans and other researchers of environmental changes will find a wealth of information and ideas in this book.

Information Technologies for Remote Monitoring of the Environment

This book describes the discovery of molecules from unexploited extreme marine environments, and presents new approaches in marine genomics. It combines the current state of knowledge in marine genomics and advanced natural products' chemistry to pursue the sustainable production of novel secondary metabolites (lead compounds), as well as pharmacologically active peptides/proteins, with antimicrobial, neuroprotective, anti-osteoporotic, anti-protozoan/anti-plasmodial, anti-ageing and immune-modulating effects. Further, it employs molecular-biology-based approaches and advanced chemical techniques to obtain and to select candidate compounds for pre-clinical and clinical studies.

Blue Biotechnology

Lake Baikal is the oldest, deepest and most voluminous lake on Earth, comprising one fifth of the World's unfrozen fresh water. It hosts the highest number of endemic animals recorded in any freshwater lake. Until recently it remained enigmatic why such a high diversity evolved in the isolated Lake Baikal. Focusing on the sponges (phylum Porifera) as an example, some answers are provided to fundamental questions on evolutionary forces. The characteristic feature of these animals is that they form their polymeric silicic acid skeleton enzymatically. This process is explored using modern molecular biological and cellular biological techniques to outline strategies to fabricate novel materials applicable in biomedicine and nanooptics.

Biosilica in Evolution, Morphogenesis, and Nanobiotechnology
