A pedigree is a family tree that shows the presence or absence of a specific trait. Used to determine the genotypes of family members, whether traits are dominant or recessive, whether traits are sex-linked.

Chromosomal disorders - Nondisjunction: When two homologous chromosomes stick together instead of separating during meiosis It results in daughter cells have the wrong number of chromosomes - missing or extra

Some basic steps in studying DNA: - Restriction enzymes are used to cut the DNA into fragments with single-stranded ends.

The human genome project an international effort to sequence the entire set of nitrogenous bases in DNA and to identify all of the genes in the human genome

The DNA of all humans is almost identical - only about 0.83% of the individual base pairs in DNA are different between individuals of the same sex
