Complex Adoption and Assisted Reproductive Technology

New pathways to parenthood are being traveled by growing numbers of couples and single adults, including many who face medical and social barriers to having children. From a psychological standpoint, families formed by complex adoption and assisted reproductive technology (ART) are first and foremost just that--families. Yet they also face a unique array of issues and challenges that may be clarified and resolved in the therapeutic setting. This much-needed book provides a deeper understanding of the ways that complex adoption and ART shape the life experience of children and parents, identifying important areas and methods for assessment and treatment. Combining developmental and ecological research with in-depth case material, the book establishes an integrative framework for clinical practice. The authors draw upon knowledge and skills gained from working in a variety of new family contexts. In the area of adoption, many new options have evolved that differ from traditional practices of adoption at birth. Thousands of older children in foster and institutional care in the United States and abroad are awaiting permanent placements. Open adoption, kinship adoption, and transracial adoption are also transforming family life, as is the use of ART, which raises significant issues of family identity and family process. The book explores such key themes as the significance of early experience, the capacity to recover from exposure to trauma, the impact of heredity and the difference that environment can make, and the centrality of primary attachment relationships. Also discussed are the impact of bias and other issues affecting families of difference, including lesbian and gay families. Concluding chapters consider promising future directions for training and research. This is an important resource for social workers, family therapists, clinical psychologists, psychiatrists, and other professionals working with children and families, as well as researchers and students in these fields. It will serve as a text in advanced undergraduate and graduate-level courses.

Understanding Adoption

Adoption is a transformational process bringing parenthood to those who long for but cannot bear children and giving stranded children home, family, and their place in the world. But every adoption is preceded and followed by its story and when these stories are told in the offices of psychotherapists we begin to understand the impact of adoption in all its complexity. We learn from parents how their quest to have and raise a child has played out in real life, and what shadows might have fallen between the dream and the reality. And we learn from the children the many ways that being adopted shaped their development, their sense of identity; what went wrong along the way and how we may help. Clinical work with parents and children as well as with adults who were adopted is the focus of Understanding Adoption. Because adoption has become widely practiced, accepted, and accessible, and because it has greatly changed the composition of families, it is a timely subject for study. The authors of this book undertake exploration of this important terrain of loss and connection, and of the fragility and resilience of human bonds.

Experience and Development

This volume reflects the strong influence that Sandra Wood Scarr's scholarship has had on what we know about experience and development via the lens of the psychological sciences, especially the fields of developmental psychology, behavior genetics, early education and child care.

Rutter's Child and Adolescent Psychiatry

Rutter's Child and Adolescent Psychiatry has become an established and accepted textbook of child psychiatry. Now completely revised and updated, the fifth edition provides a coherent appraisal of the current state of the field to help trainee and practising clinicians in their daily work. It is distinctive in being both interdisciplinary and international, in its integration of science and clinical practice, and in its practical discussion of how researchers and practitioners need to think about conflicting or uncertain findings. This new edition now offers an entirely new section on conceptual approaches, and several new chapters, including: neurochemistry and basic pharmacology brain imaging health economics psychopathology in refugees and asylum seekers bipolar disorder attachment disorders statistical methods for clinicians This leading textbook provides an accurate and comprehensive account of current knowledge, through the integration of empirical findings with clinical experience and practice, and is essential reading for professionals working in the field of child and adolescent mental health, and clinicians working in general practice and community pediatric settings.

Child Development

"This book describes child development and how it can be applied to practice with children. Developmental knowledge provides a framework for understanding children in relation to the tasks and issues relevant to their age. These, in turn, are determined by physical, social, emotional, and neurodevelopmental norms that transform in meaningful ways from birth through adolescence. Only with a sound grounding in this knowledge can we determine whether a child's emotions, thoughts, or behaviors fall within normal expectations. Part I, "Contexts of Development: A Transactional Approach," introduces the idea that the child's development is the outcome of the interplay of normative developmental maturation and the context within which it occurs. Part II, "The Course of Child Development," represents the core of the book, looking at childhood through the lens of discrete expected stages"--

Families by Law

"Families by Law" provides undergraduates, as well as law, social welfare, public policy graduate students, and others interested in family relationships, with a multifaceted analysis of how adoptive families, as the product of law rather than blood, have become a focal point for debates about the meaning of family, the rights and responsibilities of parents, and the best interests of children. -- From publisher's description.

Adolescent Pregnancy

"Adolescent pregnancy is an important public health issue and this valuable, well-referenced book covers the risk factors, child-family outcomes, and prevention. This is a very useful book for social workers and other professionals as a single source of current information about adolescent pregnancy and prevention." --Doody's This new edition of Adolescent Pregnancy contains everything a social worker needs to know to address adolescent sexual health risks and the recent rise in teen pregnancy rates. The second edition presents a new focus on cultural competence, presenting up-to-the-minute research on ethnically diverse populations. This edition goes beyond just adolescent pregnancy, discussing STI and HIV risks, as well as drug and alcohol abuse. Other cutting-edge topics include the sexualization of children, secondary prevention, the impact of abstinence-only programs, and controversies over access to birth control and abortion. Key features: Guidelines for identifying pregnancy risk levels in adolescents, and determining appropriate interventions New information about STI and HIV/AIDS prevention strategies Theories of illegitimacy and teen pregnancy, and why pregnancy rates vary among ethnic groups Research on pregnancy prevention programs that help both young men and women avoid unwanted pregnancy Chapters on adolescent parenting, and secondary prevention among adolescent parents With this book, practitioners can provide young men and women with the tools they need to regain control of their lives and their sexual health. A critically important read for social workers, health professionals, and policy makers who are concerned about adolescent pregnancy.

Play Therapy with Children and Adolescents in Crisis, Fourth Edition

"This book aims to provide professionals and clinicians-in-training with the latest forms of treatment for children and adolescents who have been impacted by crises and trauma. The various treatment options presented here include approaches that focus on the individual as well as many that include a parent in conjoint or filial therapy, and others that employ a family treatment model. Many chapters in this book demonstrate the use of a variety of creative methods with young people who have suffered traumatic experiences such as sexual abuse, bullying, immigration, natural disasters, and witnessing violence"--

Working with Adolescents, Second Edition

"Noted for its multisystemic-ecological perspective, this accessible text and practitioner resource has now been revised and expanded with 60% new material. The book provides a comprehensive view of adolescent development and explores effective ways to support teens who are having difficulties. The authors examine protective and risk factors in the many contexts of adolescents' lives, from individual attributes to family, school, neighborhood, and media influences. Assessment and intervention strategies are illustrated with diverse case examples, and emphasize a social justice orientation. Useful pedagogical features include end-of-chapter reflection questions and concise chapter summaries. Key Words/Subject Areas: social work practice, clinical, human behavior and the social environment, HBSE courses, counseling, development, treating kids, youths, teens, assessments, treatments, psychotherapy, young adults, textbooks, problems, resources for social workers Audience: Practitioners

and students in social work, clinical child/adolescent and school psychology, psychiatry, counseling, and nursing"--

Grief and Loss Across the Lifespan

"[Grief and Loss Across the Lifespan] represents a significant advance because it looks at the issues from a bio-psychosocial perspective. To a social worker who has worked mainly in a medical and nursing environment, this is a great step forward." --Bereavement Care "[Offers] valued sensitivities, knowledge, and insights, and most importantly, age-appropriate interventions for a range of significant losses....Counselors will want to keep this indispensable work close at hand." -Kenneth J. Doka, PhD Author, Counseling Individuals With Life-Threatening Illness "By taking a lifespan view, this book fills a gap in the literature on loss and grief and takes theory and practice in new and invigorating directions. It will be welcomed by those professionals of all disciplines who daily listen to and help re-write narratives of loss." -Jeffrey S. Applegate, PhD Professor Emeritus Graduate School of Social Work & Social Research Bryn Mawr College "[A] thorough, thoughtful, sensitive, and up-to-date contribution that may be the best book available today for teaching bereavement, grief, and mourning." -Jeffrey Kauffman, MA, MS, LCSW, BD, CT, CAS, BCETS Psychotherapist in private practice, Philadelphia, PA "Walter and McCoyd have written a well-organized and comprehensive examination of grief and bereavement that will be useful to the seasoned professional as well as the student new to grief and loss. The historical analysis of grief theory from classic to postmodern is interesting reading and essential for a full understanding of grief and loss in modern society." --Paige E. Payne, MS, MSW, LSW Support Services Manager PinnacleHealth Home Care and Hospice Harrisburg, PA Grief and Loss Across the Lifespan is unique in its treatment of grieving patterns and intervention strategies for different age groups. With this book, students and practitioners will learn how grief is influenced by biological responses to stress, psychological responses to loss, as well as social norms and support networks. The authors utilize a developmental framework, as each level of development from infancy through old age is addressed in four ways: Reviews normal developmental issues, abilities, and challenges for the age in question Analyzes how individuals of each age cope with serious loss of a significant other, and how they may experience life-threatening illness themselves Examines how significant others react to and mourn the death of someone in that age range Identifies the normative losses a person is likely to experience, and addresses protective and risky ways of coping with those losses The authors review important grief theories, such as postmodern and Dual Process Theory, and discuss current topics in grief, including continuing bonds, meaning making, ambiguous loss, and disenfranchised loss. With the help of this book, practitioners and students of grief counseling can learn to help patients of all ages understand that loss is at the heart of life and growth.

The Routledge International Handbook of Posttraumatic Growth

The Routledge International Handbook of Posttraumatic Growth offers a rich covering of approaches to different traumatic and stressful experiences in relation to posttraumatic growth (PTG). This handbook explores the benefits that individuals, couples, families, organizations, and communities can experience following the struggle with highly stressful and potentially traumatic events. Split into seven parts and written by a diverse international team of multidisciplinary contributors who provide a comprehensive overview of PTG, topics include religious and spiritual aspects of PTG, gender in PTG, PTG in LGBTQ+, perinatal bereavement, and more. The Routledge International Handbook of Posttraumatic Growth represents an essential resource for students, researchers, and professionals, including social workers, psychologists, nurses, mental health counselors, and psychiatrists. Culturally Competent Practice with Immigrant and Refugee Children and Families

Meeting a crucial need for social workers and other practitioners, as well as students, this authoritative text covers the breadth of issues involved in working with immigrant and refugee children and families. Within an innovative conceptual framework, essential knowledge is presented to guide culturally competent practice with clients from over 14 immigrant groups whose numbers are growing in the United States today. Expert authors review the history of each group's migration to the U.S. and discuss key issues facing families, including cultural conflicts, trauma associated with refugee experiences and/or illegal status, and the effects of poverty and discrimination. Particular attention is given to ways

that the practitioner can help families draw on culturally based resources for coping and resilience as they navigate the challenges of their new lives. Throughout, recommendations for strengths-based assessment and intervention are brought to life in detailed case examples.

Social Work in Schools

This accessible and authoritative text gives social workers the tools they need for effective and ethical practice in school settings. Readers learn practical skills for observation, assessment, intervention, and research that will enable them to respond to the needs of diverse students from preschool through the secondary grades. The book presents strategies for dealing with particular problems, such as violence, trauma, parental absence, substance abuse, bereavement, and mental health concerns. Also reviewed are developmental issues that can interfere with school success. Specific guidelines for implementing interventions, including group work, are provided. Student-friendly features include many concrete examples; study and discussion questions; and reproducible letters, forms, and checklists.

Group Work with Adolescents, Third Edition

A trusted course text and professional resource, this comprehensive book delves into all aspects of planning and conducting strengths-based group work with adolescents. In an accessible, down-to-earth style, Andrew Malekoff spells out the principles of effective group practice. Extensive clinical illustrations show how successful group leaders engage teens in addressing tough issues--including violence, sexuality, prejudice, social isolation, and substance abuse--in a wide range of settings. Normative issues that adolescents face in the multiple contexts of their lives are lucidly explained. Packed with creative ideas and activities, the book helps readers develop their skills as confident, reflective practitioners. New to This Edition *Significantly revised chapters on group work essentials, school-based practice, and trauma. *Additional topics: social media and cyberbullying, expressive and animal-assisted therapies, mindfulness, adolescent brain development, and more. *Updated practice principles, information, and references. *Numerous new practice illustrations.

Grief and Loss Across the Lifespan, Second Edition

The book addresses grieving patterns and intervention strategies according to the life trajectory and provides clinical intervention tools and strategies for coping according to the developmental stage of an individual. It incorporates losses beyond death loss, with special focus on losses related to maturational development. The second edition reflects new research that has clarified and underscored the value of theories examined in the first edition, particularly in the areas of continued bonds, disenfranchised grief, and ambiguous grief. It describes how grieving is influenced by biological responses to stress, psychological responses to loss, and social norms and support networks.--publisher.

Helping Bereaved Children

Provides information on a variety of counseling and therapy approaches for children who have experience loss, including death in the family, school, and community.

Mass Trauma and Violence

This book describes a range of effective ways to help children and families cope with major traumatic experiences such as community violence, war, and terrorist attacks. Detailed case examples bring to life the complexities of assessment and intervention with children of different ages and cultural backgrounds, including both survivors of one-time traumatic events and those dealing with ongoing stressors like the military deployment of a parent. Expert contributors provide guidelines for setting up and running school- and clinic-based support groups; conducting brief and longer-term interventions with individuals and families; and promoting healing with art, music, and play. Grounded in the latest knowledge on stress and coping, bereavement, attachment, and risk and resilience, and including much-needed tips for therapist self-care, this is an essential clinical resource and text.

Surrogate Motherhood

This multi-disciplinary book explores legal, ethical, social, psychological and practical aspects of surrogate motherhood in Britain and abroad.

Child Development, Third Edition

This widely used practitioner resource and course text provides an engaging overview of developmental theory and research, with a focus on what practitioners need to know. The author explains how children's trajectories are shaped by transactions among early relationships, brain development, and the social environment. Developmental processes of infancy, toddlerhood, the preschool years, and middle childhood are described. The book shows how children in each age range typically behave, think, and relate to others, and what happens when development goes awry. It demonstrates effective ways to apply developmental knowledge to clinical assessment and intervention. Vivid case examples, observation exercises, and quick-reference tables facilitate learning.

The applicability of attachment theory and research to social work and social policy relating to infants and children is well-established. Yet, its usefulness for enhancing the understanding of adults and their needs, both individually and as a group, has been less featured in the attachment literature. *Adult Attachment in Clinical Social Work Practice* is a wide-ranging look at attachment theory and research, its application to adults, and its natural fit with the social work profession. This edited volume covers the applicability of adult attachment theory to the clinical social work profession's various domains that include human behavior, practice, policy, research, and social work education. It addresses the broad spectrum of clinical social work, including practice in a variety of public and private settings and with a number of diverse populations, including racial-ethnic groups, gays and lesbians, trauma survivors, and child welfare parents. The book highlights the underemphasized contribution of the social work profession to the development of attachment theory and research.

Adoption and foster care is a new and burgeoning area of historical and interdisciplinary research. Too often, however, birth parents, adoptive parents, foster parents, social workers, and the children themselves have either been ignored or demonized. This comprehensive introductory resource provides an authoritative, yet accessible, examination of adoption and foster care as it has been practiced in the United States. Within the pages of this volume, the reader will find a complete view of the many individuals and groups involved, as well as a thorough understanding of the various social and economic forces that have contributed to the perceptions of what children are in need of care. Also discussed is the role of orphanages, once the primary institution for children without parents as well as a stopgap measure for poor children needing temporary care. Divided into three major sections, original essays review the practice of adoption, orphanage placement and foster care from the colonial period to the present day. Selected primary documents, including materials by children, as well as an in-depth bibliographic section, provide crucial information and insight for high school and college students. Social workers, journalists, and others will also find much value in this historical overview and guide. Contributors include Elizabeth Bartholet, Marilyn Irvin Holt, Martha Satz, and Claudia Nelson. Parenting: Contemporary Clinical Perspectives offers fresh insights into treating parents and their children that highlight the evolving role of parents throughout the lifespan and amidst contemporary social pressure and change. By drawing from their own personal experiences as well as those from clinical practice, distinguished clinicians and analysts examine each phase of parenting through a variety of lenses to tackle our biggest parenting questions. While we must be highly present for our children to help them develop a sense of self-worth, we must simultaneously step back if we want them to develop a sense of autonomy and individuality. As our role as parent changes, how can we maintain a sense of grace, humor, and perspective? How can our work in practice inform and enrich our parenting, and vice versa? Thoughtful and engaging, this volume is a valuable resource for family therapists and clinicians, especially those who are parents themselves.

Psychological Issues in Adoption

No matter how positive the intent of prospective parents, international adoption is fraught with emotional, medical, administrative, linguistic, and geopolitical issues. And while a wide range of professionals supports adopted children and their families in adjusting to the inherent changes and disruptions, the pediatrician's tasks--identifying and treating existing health problems and preventing numerous others--are particularly complex. International Adoption and Clinical Practice equips pediatricians with a

comprehensive set of tools for establishing a long-term care plan and creating interventions to promote healthy development. This concise guide overviews the intricacies of the international adoption process and how they can affect the pediatrician's job, from potential pitfalls in collecting medical data from a child's birth country to tracking health concerns into adolescence and young adulthood. Developmental and behavioral issues including attachment, language acquisition, identity development, and consequences of abuse and neglect are also examined in this context. Figures, tables, and reference lists complement current information on topics such as: Epidemiology and demographics of international adoption. Pre-adoption evaluation of medical records. Guidelines for diagnostic testing, screening, laboratory evaluations, and immunizations. Common mental health issues faced by adopted children and their families. Long-term and adult outcomes of international adoption. Relevant policy issues and areas for future study. Every child deserves a safe and healthy home, and International Adoption and Clinical Practice gives pediatricians an in-depth framework for helping to make this possible as children make the transition to a new country and the next stage of their lives.

The Praeger Handbook of Adoption: O-Z

The controversies in adoption have extended across a spectrum of policy and practice issues, and although the issues have become clear, resolution has not been achieved nor has consensus developed regarding a framework on which to improve the quality of adoption policy and practice. This book is the fourth in a series to use an ethics-based framework for analyzing and resolving these complex challenges in adoption while avoiding the divisiveness that has heretofore impeded their resolution. This book raises the question of whether assisted reproduction (including sperm donation, egg donation, and embryo transfer), which may result in a child who is not genetically related to one or both parents, creates a situation that is analogous to adoption. The book examines whether the knowledge acquired in the field of adoption should be applied in the area of assisted reproduction and whether issues in adoption, such as identity, access to background information, and search, are equally applicable in the context of reproductive technology. The chapters are: (1) "Infertility, Assisted Reproduction, and Adoption"; (2) "The Meaning of Parenthood in Assisted Reproduction and Adoption"; (3) "The Parties Served through Adoption and Assisted Reproduction"; (4) "Anonymity and Information Access"; (5) "Market Forces in Adoption and Assisted Reproduction"; (6) "Embryo Donation and Adoption"; and (7) "The Law of Adoption and Assisted Reproduction." The concluding chapter notes that the limited research in assisted reproduction has made it difficult to determine the relative risks and benefits of a number of aspects of current practice and that identifying the key issues can serve as a first step toward full discussion of the challenges faced by professionals in adoption and assisted reproduction. Play Therapy with Children and Adolescents in Crisis

The last fifteen years have produced an explosion of research on the neurobiology of attachment. This research, which explores the ways in which affect regulation play key roles in determining the structure and function of the developing brain and mind, has led to a revolution in the way that parent-child relationships are viewed. Although these insights have informed psychiatry as well as cognitive and psychoanalytic psychology, their application to social work practice, education, and research has been lacking. Here for the first time ever, social work educators Jeffrey Applegate and Janet Shapiro demystify neurobiology and present it anew with the social work audience specifically in mind. Social workers, by virtue of their work with at-risk children and families, occupy a unique position from which to employ this new research in prevention and intervention. This lack of education about neurobiology has unfortunately fostered misconceptions among social workers that these theories are too academic and thus irrelevant to clinical practice. Neurobiology for Clinical Social Work corrects this misconception and introduces social workers to the powerful and practical ideas that are coming out of neurobiological research. The research summarized here offers new insights about the crucial role that relationships play in human development and in professional helping efforts. To set the stage for this inquiry, the authors introduce fundamentals of brain structure, development, and functioning in the first parts of the book. This introduction is intended as a primer and proceeds from the assumption that many readers are relatively unfamiliar with the field of brain science. Building on this foundation, the authors go on to describe the manner in which memory and affect regulation are neuropsychological processes. The next chapters of the book delve into the concepts of attachment. Specifically, the authors are concerned with how precursors to attachment evolve during the earliest months of an infant's life and how various attachment classifications (secure, insecure, disorganized) lead to affect regulation—the ability of a child to regulate emotion. Throughout the book these concepts are discussed in the context

of what social workers face when trying to find explanatory structures for the ways in which early childhood experiences affect later life. Later chapters turn even more directly toward practice. Using case examples—including adolescent parents and their children, children with a depressed parent, and children of substance abusing parents—Applegate and Shapiro show clinicians how to make use of neurobiological concepts in designing treatment plans and interventions. One chapter contains three extended case examples, with commentary, representing the three most common intervention models taught in schools of social work—psychodynamic, cognitive-behavioral, and systemic. Various settings, such as community mental health, family service agencies, and child welfare, are also discussed. In order to be effective and meet the complex challenges of the twenty-first century, social work professionals must join with their colleagues in other disciplines in coordinated efforts to integrate and apply newly emerging knowledge toward the enhancement of human well-being. Neurobiology for Clinical Social Work is a great place to start this process of integration and learning.

Human Assisted Reproductive Technology: Future Trends in Laboratory and Clinical Practice offers a collection of concise, practical review articles on cutting-edge topics within reproductive medicine. Each article presents a balanced view of clinically relevant information and looks ahead to how practice will change over the next five years. The clinical section discusses advances in reproductive surgery and current use of robotic surgery for tubal reversal and removal of fibroids. It looks into the refinement of surgical procedures for fertility preservation purposes. Chapters also discuss non-invasive diagnosis of endometriosis with proteomics technology, new concepts in ovarian stimulation and in the management of polycystic ovary syndrome, and evidence-based ART. The embryology section discusses issues ranging from three-dimensional in-vitro ovarian follicle culture, and morphometric and proteomics analysis of embryos, to oocyte and embryo cryopreservation. This forward-looking volume of review articles is key reading for reproductive medicine physicians, gynecologists, reproductive endocrinologists, urologists and andrologists.

Blackwell's Five-Minute Veterinary Consult

Blackwell's Five-Minute Veterinary Consult: Small Mammal brings together a wide range of information on diseases commonly seen in small exotic mammals into a single, accessible resource. With consistency and broad coverage unparalleled by other texts, this new edition adds sections on chinchillas, guinea pigs, and rodents to the existing rabbit and ferret topics to offer complete coverage of these popular, yet less commonly treated, species. Detailed, up-to-date information on the diagnosis and treatment options for all disorders commonly encountered in exotic companion animals is readily accessible, making this a go-to reference for any veterinarian seeing small exotic mammals, regardless of their experience level with these species. Divided into sections by species, topics are organized alphabetically, with a standardized layout that makes it easy to find information. The Second Edition includes access to customizable Client Education Handouts, which can be downloaded and used in the veterinary clinic, on a companion website at www.wiley.com/go/oglesbee. This book is an essential purchase for general practitioners treating exotic companion animals, exotic animal veterinarians, and veterinary students.

Small Animal Internal Medicine - E-Book

With hundreds of images, step-by-step procedures, and a practical clinical emphasis, Small Animal Internal Medicine, 6th Edition offers the foundation and tools you need to properly recognize, diagnose, and treat small animals with common internal conditions. Each section of the text takes a problem-oriented approach that begins with a discussion of clinical signs, diagnostic recommendations, and techniques; and then moves to therapeutic considerations and management. This edition also includes two all-new chapters (neonatology and the effects of specific heart diseases respectively) as well as extensive updates throughout covering new advancements, techniques, and evolving best practices in the field of small animal internal medicine. Problem-oriented approach utilized in each section begins with a discussion of clinical signs, diagnostic recommendations, and techniques; and then moves to therapeutic considerations and management. Step-by-step procedures provide an easy-to-follow description of proper technique. Current drug and treatment tables ensure you are referencing the most up-to-date recommended dosages and indications. More than 900 full-color photographs and illustrations provide vivid depictions of specific disorders, diseases, and procedures. Color-coded summary tables and boxes make it quick and easy to look up clinical signs, etiology, differential diagnoses, treatment, and recommended drug dosages and indications. Expert authors and contributors are well-known for their clinical, academic, and research expertise. Practical algorithms promote decision-making skills based on clinical findings. Extensive cross-referencing makes it easy to locate related information. Suggested readings at the end of each chapter direct you on where to go for the latest research findings. NEW! Expert Consult site includes over 30 video clips covering physical examinations as well as diagnostic and therapeutic techniques like the neurologic exam. NEW! Two new chapters detail two key emerging areas within small animal medicine: neonatology and the effects of specific heart diseases. NEW! Extensive updates throughout the text keep you informed of changes and evolutions in the field, specifically in the areas of: ultrasound; probiotics; obesity; feline radiation therapy; feline diabetes; feline hyperthyroidism; canine influenza; canine Cushing's disease; orphan

puppy and kitten considerations; seizure treatments; spinal cord disorders; hematology and oncology; plus new diseases, diagnostics, and therapeutics that affect small animal medicine overall.

Despite efforts to control udder health in cattle, the causes of mastitis are on the rise. Although at first glance the birth process seems normal in domestic pigs, what could be the problem? What are the clinical aspects of the oestrus cycle and pregnancy endocrinology in mares? What is Lida cattle breeding and clinic? Does calf gender affect milk yield? Do insecticides reduce fertility? Could boar pheromones be an option to stimulate sow reproduction? *Animal Reproduction in Veterinary Medicine* is a book with the answers to such questions. It includes 'Induction and Synchronization of Estrus', which describes the protocol principles and tools. The practical approach this book takes will help students, farmers, veterinarians and academics to build an understanding of the concepts and procedures required to answer real questions by comprehending the basic function of real clinic data. Humans often endure results from the misunderstanding that to be doing well, they should make each thing themselves.

Animal Reproduction in Veterinary Medicine

Clinical endocrinology is a fascinating field requiring the challenging combination of broad pathophysiological interest and specific expertise in the field of endocrinology, thereby occupying a common ground between biochemistry, physiology and clinical medicine. In the majority of cases the clinician's notion of the presence of an endocrine disease is largely based upon pattern recognition, in which physical changes play an important role. Therefore many color illustrations have been included throughout the text. In addition there are many full color graphs and illustrations of diagnostic imaging and pathology. With over 350 illustrations the book represents a richly illustrated text on the diseases of endocrine glands. For each gland there is an introductory section on the relevant morphology and physiology, followed by descriptions of the disorders of the gland. When endocrine diseases are quite different in dogs and cats, separate descriptions are given for these species. Protocols for function tests and emergency treatments are presented in the last chapters. Consequently the book provides the user with both comprehensive descriptions and quick references. The book has been written by leading clinicians in the field, with contributions from two biochemists, a radiologist and pathologist. As such a valuable textbook for veterinary students and practitioners has been compiled to fulfil the need for an up-to-date and complete book on endocrine diseases of dogs and cats.
