2.1 Data Models, Schemas, and Instances One fundamental characteristic of the database approach
is that it provides some level of data abstraction. Data abstraction generally refers to the suppression
of

Many data models have been proposed, which we can categorize according to the types of concepts
they use to describe the database structure. High-level or

Conceptual data models use concepts such as entities, attributes, and relationships An entity
represents a real-world object or concept, such as an employee or a project from the miniworld that is
described in the database. An attribute represents some property of interest that further describes an
entity, such as the employee's name or salary. A relationship among two or more entities represents

an association among

2. The conceptual level has a conceptual schema, which describes the structure of the whole database for a community of users. The conceptual schema hides the details of physical storage structures and concentrates on describing entities, data types, relationships, user operations, and constraints. Usually, a representational data model is used to describe the conceptual
