This work has been selected by scholars as being culturally important, and is part of the knowledge base of civilization as we know it. This work was reproduced from the original artifact, and remains as true to the original work as possible. Therefore, you will see the original copyright references, library stamps (as most of these works have been housed in our most important libraries around the world), and other notations in the work. This work is in the public domain in the United States of America, and possibly other nations. Within the United States, you may freely copy and distribute this work, as no entity (individual or corporate) has a copyright on the body of the work. As a reproduction of a historical artifact, this work may contain missing or blurred pages, poor pictures, errant marks, etc. Scholars believe, and we concur, that this work is important enough to be preserved, reproduced, and made generally available to the public. We appreciate your support of the preservation process, and thank you for being an important part of keeping this knowledge alive and relevant.

### The Archives of Pediatrics, 1898, Vol. 15

Excerpt from The Archives of Pediatrics, 1898, Vol. 15: A Monthly Journal Devoted to the Diseases of Infants and Children About the only advantage of a laryngoscopic view of the larynx in children is to determine the condition or position of the vocal cords, because any abnormality above the rima sufficient to obstruct respiration can be discovered by an educated finger in a few seconds. Knowledge thus acquired can be utilized for purposes of treatment as well as for diagnosis as in the, case related above. Foreign bodies situated in or above the chink of the glottis are easily located by the sense of touch/and may sometimes be removed by the same aid. While giving practical instruction in intubation some years ago, I came across an infant cadaver having a large cyst on the posterior surface of the epiglottis which might well have been the cause of its death. It was easily broken with the finger. It is also quite within the range of possibility that neoplasms, for which laryngotomy is now the only resource, may be removed in the same manner. Excerpt from Archives of Pediatrics, Vol. 24: A Monthly Journal Devoted to the Diseases of Infants and Children; January to December, 1907 Those milks which contained from 5 to per cent. Of fat gave a top milk containing an average of per cent. Of fat. It will be seen that the fat in the ten bottles of February l<sup>g</sup>th varied from 4 per cent. To per cent., and the fat in the top 8 ounces varied from 16 to 20 per cent. Incidentally it will be observed that the 4 per cent. Milk gave about 16 per cent. Of fat in the top 8 ounces, which is 2 per cent. Higher than I have heretofore found it to be, and higher than it has generally been stated to be. This means that we have been feeding our infants with a larger percentage of fat than we have intended to, or thought we were feeding. The effect of this is that when we thought we were feeding per cent. Of fat we were actually giving from to per cent. Of fat. When we thought we were giving 3. 5 per cent. We were actually giving from per cent. To per cent. The difference between and 5 per cent. Fat in a baby's food is a matter of no small importance, and probably accounts for some troubles that we have seen on certain days and which we could not explain. The chart shows that the variation in the same day from the same farm is from 1 to per cent. Of fat in the whole milk. If the amount were uniform from day to day, we could adjust it to the needs of the infant; but when we use 15 per cent. Top milk on one day and 20 per cent. Top milk the next, serious disturbance may result. There is manifestly a necessity for some means of securing a more uniform milk than these figures show. The cause of the variation may be in the methods used in bottling, or it may be in the breed of the cows in the stable. Excerpt from The Archives of Pediatrics, Vol. 1: A Monthly Journal Devoted to the Diseases of Infants and Children; January to December, 1884 With a properly fitting tube with a movable collar ulcerations in the trachea will not occur because the essential element in their causation (i. E. Pressure) is removed. The voice after the removal of the tube is aphonic as a rule this condition gradually improves so that at from one week to a month it is entirely restored, - electricity applied to the larynx externally or internally to the vocal chords may hasten the cure as well as proper care in use of the voice. ## ARCHIVES OF PEDIATRICS

Excerpt from Archives of Pediatrics, Vol. 28: A Monthly Journal Devoted to the Diseases of Infants and Children; January to December, 1911 In the second case mother and child succumbed after Caesarean section. The child was living when operation was begun but when removed was perfectly rigid in all its body and extremities. It evidently had died in a convulsive seizure in utero. The pathologic findings were similar in both mother and child. The urine was drawn from the child's bladder by means of a soft catheter, immediately after it was delivered from the uterus, and it was found to be the urine of acute nephritis. It contained 10 grams of albumin to the liter, numerous red blood cells, few leukocytes and casts of all kinds. Case III. Eclamptic mother died after Caesarean section. Her child survived. The urine collected from the infant showed hematuria and albumin for three days. The albumin disappeared on the fifth day and the child gained slowly. Case IV. Eclamptic mother died, survived by her infant. The urine collected from the child showed a large amount of blood, albumin and leukocytes, hyaline and blood casts. The urine was free from albumin for the first time on the eighteenth day after birth. Case V. The mother died in eclamptic seizure. Her child had light convulsive seizures during the first five hours after delivery. Case VI. Eclamptic mother gave birth to twins. The mother had but one convulsion and recovered. The twins thrived, though both gave urine loaded with blood, albumin and casts. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. ## ARCHIVES OF PEDIATRICS VOLUME

Excerpt from Archives of Pediatrics, Vol. 37: A Monthly Journal Devoted to the Diseases of Infants and Children; Founded in 1884 by Wm; Perry Watson, M. D In a discussion of this sort, it is perhaps as well, before going further, to postulate certain things as being granted by us all. If these are not taken as axioms, then the conclusions that we draw will not be binding. We shall assume, then, throughout this paper, that the mission of the modern hospital is threefold: first, comes the ministering to the sick within its doors; second, the instruction of the medical fraternity of the community, both within its staff and without - the hospital that fails in this second duty, of course, thereby confesses to its failure in the first, as we nowadays believe; third, the duty of educating the lay portion of the community in all matters pertaining to its health, individual or collective. All these functions we must bear in mind, in plan ning our pediatric service, if we are to secure the best results. About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books. Find more at [www.forgottenbooks.com](http://www.forgottenbooks.com) This book is a reproduction of an important historical work. Forgotten Books uses state-of-the-art technology to digitally reconstruct the work, preserving the original format whilst repairing imperfections present in the aged copy. In rare cases, an imperfection in the original, such as a blemish or missing page, may be replicated in our edition. We do, however, repair the vast majority of imperfections successfully; any imperfections that remain are intentionally left to preserve the state of such historical works.

#### Lead in Paint, Soil, and Dust

"This book identifies the key targets for intervention through a detailed exploration of the pathways and processes that give rise to health inequalities across the lifecourse. It sets this against an examination of both local practice and the national policy context to establish what works in health inequalities policy, how and why. Authoritative yet accessible, the book provides a comprehensive account of theory, policy and practice. What Works in Tackling Health Inequalities? is essential reading for academics and students in medical sociology, social psychology, social policy and public health, and for policy makers and practitioners working in public health and social exclusion."--BOOK JACKET.

#### Publications of the Children's Bureau

Cardiovascular risk factors contribute to the development of cardiovascular disease from early life. It is thus crucial to implement preventive strategies addressing the burden of cardiovascular disease as early as possible. A multidisciplinary approach to the risk estimation and prevention of vascular events should be adopted at each level of health care, starting from the setting of perinatology. Recent decades have been marked with major advances in this field, with the emergence of a variety of new inflammatory and immune-mediated markers of heightened cardiovascular risk in particular. The current book reflects some of the emerging concepts in cardiovascular pathophysiology and the shifting paradigm of cardiovascular risk estimation. It comprehensively covers primary and secondary preventive measures targeted at different age and gender groups. Attention is paid to inflammatory and metabolic markers of vascular damage and to the assessment of vascular function by noninvasive standardized ultrasound techniques. This is a must-read book for all health professionals and researchers tackling the issue of cardiovascular burden at individual and community level. It can also serve as a didactic source for postgraduate medical students.

#### Child Care and Child Welfare: Outlines for Study

For progress to be maintained in a clinical field like sleep medicine, unimpeded, unrestricted access to data and the advances in clinical practice should be available. The reason why this book is exciting is that it breaks down the barriers to dissemination of information, providing scientists, physicians, researchers and interested individuals with a valuable insight into the latest diverse developments within the study of sleep disorders. This book is a collection of chapters, which can be viewed as independent units dealing with different aspects and issues connected to sleep disorders, having in common that they reflect leading edge ideas, reflections and observations. The authors take into account the medical and social aspects of sleep-related disorders, concentrating on different focus groups, from adults to pregnant women, adolescents, children and professional workers.

#### Child Care and Child Welfare

The aim of the book is to serve for clinical, practical, basic and scholarly practices. In twentyfive chapters it covers the most important topics related to Autism Spectrum Disorders in the efficient way and aims to be useful for health professionals in training or clinicians seeking an update. Different people with autism can have very different symptoms. Autism is considered to be a "spectrum" disorder, a group of disorders with similar features. Some people may experience merely mild disturbances, while the others have very serious symptoms. This book is aimed to be used as a textbook for child and adolescent psychiatry fellowship training and will serve as a reference for practicing psychologists, child and adolescent psychiatrists, general psychiatrists, pediatricians, child neurologists, nurses, social workers and family physicians. A free access to the full-text electronic version of the book via Intech reading platform at <http://www.intechweb.org> is a great bonus.

#### Child Labor: Outlines for Study

A book about SURVIVING Some of the Deadliest Plagues Known to Humanity... (& An Antidote to Corona Virus/COVID-19?) "...the more you know about the past, the better you are prepared for the future." ~ Theodore Roosevelt ~ The direct quotes given throughout this study - augmented by original mortality data compiled and edited by A. Parent, reveals a lesser-known history of the dramatic decline in deaths from a whole plethora of pathogens that once plagued our developing nations and its probable cause. I.e., a natural universal biological phenomenon of ancestrally acquired robust resilience to dying from once deadlier contagions throughout the generations. The significance of this being that, whilst our health officials are expecting the plagues of old to return at any moment and are poised nervously armed with whatever vaccines they can throw at them, it would appear that our immune systems having very long-term ancestral memory have not forgotten how to battle against such opportunistic invaders of the past and it now looks highly likely that almost all of us would survive even if some of the deadliest contagions returned today to plague us in their original colours. This, therefore, also has implications for our more modern and firmly entrenched belief that we eradicated at least some of these bugs and, obviously, with our current mass vaccination strategies that are so firmly entrenched and becoming near-universal, we are not currently following nature's schedule of childhood natural immunization as a result. Thus, we assess the consequences of this situation in the context of the above. In essence, after reviewing all the relevant evidence for when, how and to what degree we have attempted to protect against infectious diseases at a population level versus nature's method of full exposure, this study reaches the inescapable conclusion that Nature has done a significantly better job of natural mass immunization down through the generations and across the entire world in line with our respective levels of development, a whole lot better than us. The moral of this story is that it looks like our ancestors were counting more of their descendent children (that's us) because they had the (actual) Pox and just about everything else going in the way of infectious diseases and we were healthier as a result. That was until we began to intervene in the natural generational immunity cycle - but, the protection afforded by our mass vaccination efforts being so short-lived - ironically, maybe helping to restore this remarkable immunization cycle once again. All in all, it is hoped that this study will go some way to alleviating our unnatural phobia regarding the germ or pathogens of old returning, and go some way to restoring our faith in Nature so that this may inform a more natural health focused future.

This report synthesizes the available scientific evidence on the effects of various firearm policies on firearm deaths, violent crime, the gun industry, participation in hunting and sport shooting, and other outcomes. Based on this synthesis, the authors highlight policies whose effects are better supported by evidence and areas where more and better information could contribute to establishing fair and effective gun policies.

#### Vocational Division Bulletin

Media has been playing vital role in shaping the behavior of children since many centuries. Many children are seen copying and imitating the roles of their favorite cartoon character, and thinking it heroic to act violent. The children are seen acting exactly like the television characters. Is in the human nature to get influenced and inspired by the people they love. Today media is playing important roles in the lives of individuals. Portrayal of aggression, violence, destruction, riots effects individuals in different ways. This issue is becoming an alarming public health hazard. This study tries to find out the relationship between exposure to violent media and the likelihood of developing aggressive behaviors in children.

## Home Economics Education Series

The Small Arms Survey 2008 examines the problem of diversion and analyses the public health approach to armed violence.

## Home Economics Series

Issues for 1977-1979 include also Special List journals being indexed in cooperation with other institutions. Citations from these journals appear in other MEDLARS bibliographies and in MEDLING, but not in Index medicus.

## Vocational Education Bulletin

Juvenile Delinquency: Why Do Youths Commit Crime? focuses on why juveniles commit crime. It includes discussions on what constitutes criminal behavior by juveniles, the general theories on delinquency, and discussions that tie the theories with real life situations. The book opens the students' eyes to the fascinating concepts involving juvenile delinquency, and is designed to provide a complete study of the behavior, beliefs, conditions, and reactions to deviance by young offenders. Throughout Cliff Roberson and Elena Azaola gives students a detailed discussion of and what constitutes juvenile delinquency to allow for better understanding of this phenomenon. In each of the chapters, the authors encourage the student to develop new insights on criminal behavior of juveniles. The book makes the subject come alive by the generous use of "down to earth" examples of the issues involved in the area. While each chapter builds on the previous chapters, the book is written in a manner to reduce the necessity of memorization by students. Each chapter begins with chapter objectives that highlights key points for the student and brief chapter outlines. Each chapter closes with a practicum, chapter summary, and discussion and review questions which enhance student learning. The book closes with a glossary where student may refer to they key terms and words throughout the text.

Excerpt from Archives of Pediatrics, Vol. 8: A Monthly Journal Devoted to the Diseases of Infants and Young Children; January to December, 1891 This enables the instrument-maker to round off the upper end, which presses against the base of the epiglottis, and which would otherwise be sharp and cause ulceration at this point. It also allows him to round off the lower end and do away with the Sharp, cutting edge, which would otherwise cause ulceration of the anterior wall of the end of tube. Unlike some other reproductions of classic texts (1) We have not used OCR(Optical Character Recognition), as this leads to bad quality books with introduced typos. (2) In books where there are images such as portraits, maps, sketches etc We have endeavoured to keep the quality of these images, so they represent accurately the original artefact. Although occasionally there may be certain imperfections with these old texts, we feel they deserve to be made available for future generations to enjoy.
