McGraw-Hill's 500 World History Questions, Volume 2: 1500 to Present: Ace Your College Exams

In the following pages I have endeavoured to give, in a series of picturesque sketches, a general view of the natural history as well as of the physical appearance of North and South America. I have first described the features of the country; then its vegetation; and next the wild men and the brute creatures which inhabit it. However, I have not been bound by any strict rule in that respect, as my object has been to produce a work calculated to interest the family circle rather than one of scientific pretensions. I have endeavoured to impart, in an attractive manner, information about its physical geography, mineral riches, vegetable productions, and the appearance and customs of the human beings inhabiting it. But the chief portion of the work is devoted to accounts of the brute creation, from the huge stag and buffalo to the minute humming-bird and persevering termites,—introduced not in a formal way, but as they appear to the naturalist-explorer, to the traveller in search of adventures, or to the sportsman; with descriptions of their mode of life, and of how they are found, hunted, or trapped. I have described in the same way some of the most remarkable trees and plants; and from the accounts I have given I trust that a knowledge may be obtained of the way they are cultivated, and how their produce is prepared and employed. Thus I hope that, with the aid of the numerous illustrations in the work, a correct idea will be gained of the wilder and more romantic portions of the great Western World.

The Western World: Picturesque Sketches of Nature and Natural History in North and South America

"This book takes an analytical approach to world history. Instead of proceeding through history descriptively, it looks at several major questions and ideas, such as the role of technology, the development of universal religions, global trade, or participatory politics. If this sounds thematic, it is. But it also progresses chronologically, analyzing these themes as they apply in certain eras. We use both primary sources in-text, and the latest scholarship as secondary source. These we use frequently in each chapter both to employ the voices of scholars where they say things better than we could, and footnote them for students' reference. We also hope to convey the sense that all this content is part of an ongoing debate amongst historians--and scholars from different disciplines. Finally we attempt to keep the text accessible by focusing on narrative elements of history, and keeping in mind that the readers are undergraduates, often with little exposure to the subject matter. However, the level of ideas remains high"--Provided by publisher.

Student Study Guide to The Ancient Near Eastern World

Natural philosophy encompassed all natural phenomena of the physical world. It sought to discover the physical causes of all natural effects and was little concerned with mathematics. By contrast, the exact mathematical sciences were narrowly confined to various computations that did not involve physical causes, functioning totally independently of natural philosophy. Although this began slowly to change in the late Middle Ages, a much more thoroughgoing union of natural philosophy and mathematics occurred in the seventeenth century and thereby made the Scientific Revolution possible. The title of Isaac Newton's great work, *The Mathematical Principles of Natural Philosophy*, perfectly reflects the new relationship. Natural philosophy became the 'Great Mother of the Sciences', which by the nineteenth century had nourished the manifold chemical, physical, and biological sciences to maturity, thus enabling them to leave the 'Great Mother' and emerge as the multiplicity of independent sciences we know today.

What is Manorialism During the Middle Ages, the method of land ownership that was prevalent in some regions of Europe, most notably France and later England, was known as manorialism. This system is often referred to as seigneurialism, the manor system, or the manorial system. One of its distinguishing characteristics was a huge manor house that was often fortified. Within this manor house, the lord of the manor and his dependents lived and controlled a rural estate. Additionally, there was a population of laborers or serfs who worked the land from the surrounding area in order to provide for themselves and the master. At first, these workers satisfied their commitments by providing their services in the form of labor time or in-kind produce; later, as the level of commercial activity expanded, they were compensated with currency. Part of the feudal regime was the practice of manorialism.
