In Alabama, a general contractor who works on a commercial or industrial project that costs \$50000 or more must get a license. For a residential project the limit is \$10000. It is the State Licensing Board for General Contractors that administers licensing. There is a MUST-TAKE Business and Law exam which covers a wide range of fundamental topics. There is no way you can pass the exam without having solid real world experience. Our notes give you knowledge, principles and concepts. To master the topics, you must be "in the field" - you need to go through the real world plans, the various contract documents and the various administrative paperworks all by yourself. And you need to know how the experts get things done. To succeed in the exam, you also need to read as many reference books as possible. There is no single book that can cover everything!

THE CONSTRUCTION PROJECT MANAGEMENT SUCCESS GUIDE 2ND EDITION: Everything You Need To Know About Construction Contracts, Estimating, Planning And Scheduling, Skills To Manage Trades And Home Renovations You're about to discover how to the re-emergence of the real estate market sparked renewed optimism in construction. Across different states in the country, residential construction jobs are being undertaken in order to satisfy the demands in housing. Since residential construction projects are still a business (except when you want to build your own home), the idea is to build enough living spaces and to offer them to prospective clients or leasers at an affordable price. Of course the success of such a goal still lies on income and the general economic outlook, but one thing is for certain: now that the housing crisis is over, more people will look forward getting a place to call their home.

NASCLA Contractors Guide to Business, Law and Project Management, Connecticut Edition

The Student Loan Scam is an exposé of the predatory nature of the \$85-billion student loan industry. In this in-depth exploration, Collinge argues that student loans have become the most profitable, uncompetitive, and oppressive type of debt in American history. This has occurred in large part due to federal legislation passed since the mid-1990s that removed standard consumer protections from student loans-and allowed for massive penalties and draconian wealth-extraction mechanisms to collect this inflated debt. High school graduates can no longer put themselves through college for a few thousand dollars in loan debt. Today, the average undergraduate borrower leaves school with more than \$20,000 in student loans, and for graduate students the average is a whopping \$42,000. For the past twenty years, college tuition has increased at more than double the rate of inflation, with the cost largely shifting to student debt. Collinge covers the history of student loans, the rise of Sallie Mae, and how universities have profited at the expense of students. The book includes candid and compelling stories from people across the country about how both nonprofit and for-profit student loan companies, aided by poor legislation, have shattered their lives-and livelihoods. With nearly 5 million defaulted loans, this crisis is growing to epic proportions. The Student Loan Scam takes an unflinching look at this unprecedented and pressing problem, while exposing the powerful organizations and individuals who caused it to happen. Ultimately, Collinge argues for the return of standard consumer protections for student loans, among other pragmatic solutions, in this clarion call for social action.

Construction Management

This in-depth guide to the construction management relationship takes a practical approach to the CM process -- focusing on legal, contractual, and technical issues. The authors -- a team of leading experts -- show you how to efficiently structure agreements between an owner and a construction manager. In clear, nonlegal language, they outline the problems that you may encounter with the CM approach -- so that you can avoid pitfalls before they happen. You'll find the information you need, to help pave the way: learn the definitional issues of CM and how to choose a construction manager; get a full understanding of the services provided by a construction manager, as well as the liability issues involved; become familiar with the CM's project role and sample contract language; and read case studies of actual construction management projects.

Construction Management

Construction Contracts focuses on the law governing construction contracts, and the management and administration of these contracts.

Construction Contracts

Principles and Practices of Construction Law presents the most common areas of law encountered in the construction industry in an easy-to-read format. Geared to those not yet studying law, the legal concepts are simplified and presented in a basic and simple format that is understandable, practical and devoid of excessive legal detail that can be overwhelming. The book is designed to build readers' ability to think critically, solve legal problems and write comprehensible solutions to claims and issues arising in the construction process. The volume provides an introduction to the legal system and the maxims of law, and addresses applying and using the law, logic, preparing legal arguments and briefing cases, law, ethics, and morality, relationships among the parties on the project, bidding, specification and plans, delays, and acceleration, differing, and unforeseen site conditions, warranties, termination of the contract and contract damages, torts, joint liability and indemnity and dispute resolution. For construction industry professionals interested in a basic understanding of important legal concepts.

Construction Management Law and Practice, 1998

This book discusses practices in preparing and defending claims, bringing in funding, insurance and design team issues. It brings together the basic knowledge from the principal post-1996 legislation required by practitioners, together with an outline of the options and risks.

Construction Management

Although the legal principles involved in construction contracts and their management and administration are an aspect of general contract law, the practical and commercial complexities of the construction industry have increasingly made this a specialist field. Recognizing this, Construction Contracts is a fully revised edition of the UK's leading textbook on the law governing this area. Brought up to date with recent cases and developments in the law as it stands at July 2000, this new edition: takes full account of the effects of the Housing Grants, Construction and Regeneration Act 1996, the Arbitration Act 1996, the Contracts (Rights of Third Parties) Act 1999 and the changes in the legal system brought about by the Woolf reforms includes extended coverage of financial protection, construction insurance and tendering controls, as well as the Construction (Design and Management) Regulations has been revised to take account of changes to the common standard-form contracts, particularly the New Engineering Contract and the GC/Works family of contracts. Retaining the same basic approach as its successful predecessors, this important text introduces the general principles that underlie contracts in construction, illustrating them by reference to the most important standard forms currently in use.

Principles and Practices of Construction Law

The Law of Construction Disputes covers the construction dispute process by analysing the main areas that can lead to disputes and how to effectively deal with them once they have arisen. The book combines theory and practice along with exact excerpts of the leading case decisions covering the entire spectrum of construction law and the disputes that arise.

Construction Claims: Current Practice and Case Management

Guides the reader through the world of construction contracts, litigation, planning and environmental law.

Construction Law, Principles and Practice

FIDIC Contracts: Law and Practice is sure to become the leading industry standard guide to using the FIDIC forms, and is the only book to date which deals with the whole suites of contracts, including the new gold book for Design, Build and Operate projects. The White & Case work is outstanding in its detailed consideration and treatment of the legal aspects of the interpretation and application of the Conditions, touching on many points that most people would not have encountered. Humphrey LLoyd, International Construction Law Review [2010] ICLR 386

Construction Contracts

This comprehensive and popular textbook aims to bridge the gap between theoretical study and practical application. It covers the essentials of construction contracts, including how the law has developed, the reasoning behind key clauses and how contract law is applied in practice, and it helps to make the transition from student to practitioner manageable. This text is intended for all undergraduates studying a construction contract law or a contract administration module or unit. It is ideal for post-graduate degrees in quantity surveying and building surveying, construction project management, and construction management. Civil engineers and students of architecture and architectural technology will find it provides a comprehensive guide to the law in the construction context. It is also very comprehensive in scope and provides sufficient materials to bridge the gap between the student and professional texts. New to this Edition: - Discussion of the implementation of the Local Democracy, Economic Development and Construction Act 2009, amending the Housing Grants Construction and Regeneration Act 1996 - Updates to sections on the formation of contracts, mistakes in tenders, equitable remedies, agency and supervision, and the immunity of expert witnesses, reflecting the latest Supreme Court judgements - Clarification of the relationship between construing and implication of terms, and the law on construction operations - Expansion of the case law on professional liability, and on the Defective Premises Act as a statutory term - More real-world construction examples to illustrate concepts and theories

The Law of Construction Disputes

With thirty per cent of the world's oil and gas production coming from offshore areas, the construction of specialist vessels to perform offshore operations is a crucial part of the industry. However, with exploration and production being performed in increasingly exacting locations, the scope for disputes arising from cost overruns, scheduling delays and technical difficulties is immense. In the absence of legal precedent, this ground-breaking title provides practical guidance on avoiding and resolving disputes in the construction of offshore units and vessels, including FPSOs, drilling units, OSVs and fixed platforms. Written by a leading team at Stephenson Harwood, this book covers the entire construction process from initial concept right through to installation, at each stage commenting on typical contract terms and offering expert advice based on real-life examples. Key topics include: Design risk Changes to the work Consequences of delay Acceptance Tests Termination Dispute resolution This unique text will be of enormous assistance both to legal practitioners and offshore construction professionals including project managers, financiers, insurers, and sub-contractors.

Construction Law and Practice in Hong Kong

Many building contract claims are ill-founded, often because the basic principles are misunderstood. This highly regarded book examines the legal basis of claims for additional payment, and what can and cannot be claimed under the main forms of contract. It includes chapters dealing with direct loss and expense, liquidated damages, extension of time, concurrency, acceleration, time at large, common law and contractual claims, global claims, heads of claim and their substantiation. The new fourth edition has been substantially restructured and updated. Nearly 100 additional cases have been added as well as four new contracts: the JCT Construction Management and Major Project contracts, the JCT Standard Form of Domestic Subcontract, and the Engineering and Construction Contract (the NEC Form). The book continues to use the JCT Standard Form (JCT 98) as the basis of the text, with important differences highlighted in the other forms. Seventeen forms are dealt with and they have all

been updated since the last edition of this book. This new edition is essential reading for architects, contract administrators, project managers and quantity surveyors. It will also be invaluable to contractors, contracts consultants and construction lawyers. David Chappell BA(Hons Arch), MA(Arch), MA(Law), PhD, RIBA has 45 years' experience in the construction industry, having worked as an architect in public and private sectors, as contracts administrator for a building contractor, as a lecturer in construction law and contract procedures and for the last fifteen years as a construction contract consultant. Construction Law

Explains construction professional practice in an appealing, succinct, and relatively informal way. This book details the management of construction projects from beginning to end, concentrating on the principles underlying what construction professionals like architects do. It covers the entire process—from the initial meetings with clients through the design, recruitment of a contractor, contract management, construction, and handover—all without referencing legal cases, contract clause numbers, laws, statutes, or the complex jargon that can muddle comprehension. The first part of Professional Practice for Architects and Project Managers offers enlightening chapters that cover: professional standards, perks of the job, bonds and parent company guarantees, office meetings, letter writing, the RIBA Plan of Work, and Building Information Modelling (BIM). The second section teaches all about dealing with the clients, and includes chapters that discuss the extent of services, fee negotiations, conflicts of interest, and more. Next the book looks at such on-the-job responsibilities as surveys, ground investigations, cost estimates, work schedules, letters of intent, etc. The final section goes over everything readers need to know about dealing with a building contract in progress, informing them about advance payments, insurance, site inspections, contractor disputes, terminations, final certificates, and more. Details the entire process of managing a construction project, including dealing with clients, the design process, running a construction project, and more. Highlights what the construction professionals do in their positions. Shows how principles of construction management are applied in practice. Written in a reader-friendly and accessible way. Professional Practice for Architects and Project Managers is an excellent resource for architects and other construction professionals such as contract administrators, project managers, quantity surveyors, and contractors.

FIDIC Contracts: Law and Practice

Changes to the work on construction projects are a common cause of dispute. Such variations lead to thousands of claims in the UK every year and many more internationally. Liability for variations is not only relevant to claims for sums due for extra work but this is also an important underlying factor in many other construction disputes, such as delay, disruption, defects and project termination. This is the first book to deal exclusively with variations in construction contracts and provide the detailed and comprehensive coverage that it demands. Construction Contract Variations analyses the issues that arise in determining whether certain work is a variation, the contractor's obligation to undertake such work as well as its right to be paid. It deals with the employer's power to vary and the extent of its duties to approve changes. The book also analyses the role of the consultant in the process and the valuation of variations. It reviews these topics by reference to a range of construction contracts. This is

an essential guide for practitioners and industry professionals who advise on these issues and have a role in managing, directing and compensating change. Participants in the construction industry will find this book an invaluable guide, as will specialists and students of construction law, project management and quantity surveying.

Construction Contract Law

Construction Law and Management explains the state of design information appropriate to a given procurement route, and the need to identify risks and strategies for managing them. This handy desk side reference offers a comprehensive guide to construction law and management and is essential reading for anyone in the construction, architecture and engineering industries.

Offshore Construction

Fully updated to take into account recent legislation, this book provides a sound basis for students. It gives them an understanding of the principles involved in contractual and procurement arrangements in the construction industry.

Building Contract Claims

This is a new dictionary which provides a clear and concise explanation of terms used in land, property and construction law and management. The four key areas of coverage are: planning/construction law, land law, equity/trusts and finance and administration. It will be a useful reference for property and building professionals and a personal purchase for students of property and construction law on building, construction management, estate management and law courses. Jack Rostron is an experienced author and editor whose 1997 Spon title *Sick Building Syndrome* has been well received and widely reviewed. His co-authors contribute the necessary specialist knowledge from their respective fields of teaching and legal practice.

Professional Practice for Architects and Project Managers

Construction professionals of all kinds frequently need legal advice that is straightforward as well as authoritative and legally rigorous. Building on the success of two previous editions, David Chappell returns to provide answers to 225 FAQs from his experience as Specialist Advisor to the RIBA. With 50 new questions, and thorough updates to address changes to the law and contracts, this is an invaluable first port of call for any construction law problem. Questions range in content from extensions of time, liquidated damages and loss and/or expense to issues of practical completion, defects, valuation, certificates and payment, architects' instructions, adjudication and fees. Among the new questions are: Is the contractor bound by its price even if there is an error? How do terms about working in a spirit of trust affect other clauses? Can architects lose their rights to certify under JCT 2011 contracts? Every question included has been asked of David Chappell during his career, and he uses his vast experience to provide clear, easy to follow advice in this book. Most were originally asked by architects, but the answers will be of wide interest to everyone involved in construction.

Construction Contract Variations

Intensely practical and clearly written, *Law in Practice: the RIBA Legal Handbook* is the RIBA's jargon-free, professional guide to the law as it relates to a construction project. It addresses all the fundamental, up-to-date issues of contemporary construction law, allowing architects to make sound judgements, avoid disputes, and run projects on a safer basis. This new edition has been fully updated to reflect the new RIBA Plan of Work 2013 – the industry's framework for construction projects – as well as recent case law and other legal updates that the practising architect needs to be aware of. Why does an appointment need to be written? Why does language matter? What is a novation? What does an overall cap on liability mean, and how can you convince a client to agree one? How do you assess an extension of time? When should you notify your insurer of a potential claim? *Law in Practice* answers all of these questions and many more.

Construction Law and Management

The second edition of this well-regarded title continues to take a clear and practical approach to the law and practice relating to construction contracts in the UK. It provides comprehensive coverage of the substantive law and modern dispute resolution procedures in the field of construction. Throughout

the work the author provides key practical tips including: where and when you issue proceedings; what the judges will expect and their preferences; and how trials can be made shorter. A separate section also examines enforcement of adjudicator's awards covering recent case law on this area. This is carefully examined and digested in detail to ensure the reader has an understanding of the pitfalls of enforcement. The second edition covers all relevant case law and legislation since the publication of the first edition in 2006 including the changes proposed under the Local Democracy, Economic Development and Construction Bill. It includes a new chapter on partnering and revised and updated appendices to include the amendments to the Housing Grants, Construction, and Regeneration Act 1996.

Contractual Procedures in the Construction Industry

Law and the Built Environment is a core textbook for all students undertaking compulsory law modules on construction, real estate and property management programmes. This single text provides an accessible introduction to the many areas of law studied by aspiring built environment professionals. Written by a team of lecturers with many years' teaching experience in these areas, key principles of English law are placed in their relevant professional context and clearly explained in exactly the right level of detail for success in the modules studied. The book also focuses in greater depth on some specialist areas of built environment professional practice, including construction contracts, health and safety, rent review, dilapidations, and lease renewals. It provides an essential resource for students studying for qualifications leading to professional membership of the Royal Institution of Chartered Surveyors (RICS) or the Chartered Institute of Building (CIOB). It caters primarily for students studying these subjects at bachelor's degree level, but will also be suitable for students on programmes at HNC and HND levels, as well as those undertaking professional examinations. It will also provide introductory reading for students undertaking master's level programmes, and particularly for the increasing numbers of graduates from other disciplines who are now studying on RICS-accredited master's degree conversion programmes.

Dictionary of Property and Construction Law

This innovative book provides a thorough and comprehensive guide to construction law by blending together black letter law and socio-legal approaches. This mixed methodology makes an ideal introduction to the subject for those studying to enter the Architecture, Engineering and Construction (AEC) Industry in a professional capacity. Designed to equip the student with all they need to know about construction law, the topics covered include: The fundamentals of law and the English legal system Contract, business, tort and property law Procurement, subcontracting and partnering Building Information Modelling and best practice Dispute resolution including mediation, arbitration, litigation and adjudication The book's suitability for study is enhanced by its logical structure, chapter summaries and further reading lists whilst the role of law in achieving a more collaborative and less confrontational AEC industry is examined in detail. Construction Law: From Beginner to Practitioner takes the reader on a journey from basic legal concepts through to a more detailed appreciation of what the AEC needs as a specialist client for legal services. This book is useful not only for understanding the basics, but also as a reference that practitioners will use time and again.

Construction Contracts

Now in its second edition, Construction Law is the standard work of reference for busy construction law practitioners, and it will support lawyers in their contentious and non-contentious practices worldwide. Published in three volumes, it is the most comprehensive text on this subject, and provides a unique and invaluable comparative, multi-jurisdictional approach. This book has been described by Lord Justice Jackson as a "tour de force"

Law in Practice

The Construction industry routinely operates across international borders, which means that Construction professionals need to have a good understanding of how legislation in different jurisdictions might affect their work. This book is an in-depth analysis of international Construction law from all the major jurisdictions of the world, alongside their relevant contract law principles, helping the reader to prepare for the complexity of an international construction project. The book begins by introducing the major families of Law, before looking at individual jurisdictions. Each chapter is written by an experienced legal professional operating in that region and covers subjects such as, taking over, defects liabilities,

warranties, design issues, termination, bonds and guarantees, limitation of liability and more. The systems included are: German Civil system (Germanic code) French Civil system (Napoleonic code) English Common law system GCC Countries Civil law system (with emphasis on UAE, Qatar, Saudi Arabia and Egypt) Nordic legal system Chinese Civil system Finally, the book will discuss the national standard construction contracts used in the differing legal systems and also the widely used FIDIC contracts. The combination of truly international coverage with the practical insight of experienced practitioners means that this book will be invaluable to any professional involved in the Construction industry including, lawyers, project managers, contractors and investors as well as academics in the field.

Construction Contracts

A clear, concise introduction to construction law for professionals Construction Law: An Introduction for Engineers, Architects, and Contractors offers a comprehensive review of the U.S. legal environment, focusing on the legal concepts and issues applicable to the design and construction industries. Topics covered include: Basic legal principles Project participants Project delivery systems Construction contracts The design process Procurement Pricing construction projects Subcontractors and suppliers Time for performance Construction scheduling Contract administration The payment process Changes to the work Differing site conditions Termination of the construction contract Mechanic's liens Construction insurance Surety bonds Liability for defective construction Calculations of damages The Economic Loss Doctrine Alternative dispute resolution This book serves as an excellent introduction to construction law for students as well as professionals in the construction industry.

Construction Law

This addition to the Greens Concise Scots Law series provides comprehensive coverage of the core areas of land law as it operates in Scotland. The text should be of interest to students of the subject and to practitioners involved in this changing area of law

Construction Law

Law for the Construction Industry provides a comprehensive introduction to the English legal system and basic contract law for those involved in the construction industry. It covers the level 2 module on legal studies of The CIOB's Education Framework and is officially sanctioned by The CIOB as the recognised book for that module. The book assumes no previous knowledge of English law. The second edition has been brought fully up-to-date with the latest legal changes. It explains basic contract law and gives the reader an understanding of employment and consumer law whilst placing law in the context of the construction industry throughout. Law for the Construction Industry is a core textbook for the CIOB level 2 module on legal studies, as well as BTEC HNC/D and degree courses in building and construction management.

Construction Law

This is the first book to offer a systematic and analytical overview of the legal framework for residential construction. In doing so, the book addresses two fundamental questions: Prevention: What assurances can the law give buyers (and later owners and occupiers) of homes that construction work – from building of a complete home to adding an extension or replacing a shower unit – will comply with minimum standards of design, safety and build quality? Cure: What forms of redress - from whom, and by what route - can residents expect, when, often long after completion of construction, they discover defects? The resulting problems pose some big and difficult questions of principle and policy about standards, rights and remedies, which in turn concern justice more generally. This book addresses these key issues in a comparative context across the United Kingdom, Ireland, Australia and New Zealand. It is an accessible guide to the existing law for residents and construction professionals (and their legal advisers), but also charts a course to further, meaningful reforms of the legal landscape for residential construction around the world. The book's two co-authors, Philip Britton and Matthew Bell, have taught in the field in the UK, Australia and New Zealand; both have been active in legal practice, as have the book's two specialist contributors, Deirdre Ní Fhloinn and Kim Vernau.

Construction Law

"The book describes those issues that a professional should expect to find in a comprehensive services agreement. It is the first to deal in detail with the particular risks that are inherent in non-standard agreements. It discusses the legal liabilities that might be imposed on the professional if those risks are accepted. Reference is made to some of the standard conditions produced by professional bodies. The scope of professional identity insurance is also covered."--BOOK JACKET.

Construction Law International

The updated second edition of the practical guide to international construction contract law The revised second edition of International Construction Contract Law is a comprehensive book that offers an understanding of the legal and managerial aspects of large international construction projects. This practical resource presents an introduction to the global construction industry, reviews the basics of construction projects and examines the common risks inherent in construction projects. The author — an expert in international construction contracts — puts the focus on FIDIC standard forms and describes their use within various legal systems. This important text contains also a comparison of other common standard forms such as NEC, AIA and VOB, and explains how they are used in a global context. The revised edition of International Construction Contract Law offers additional vignettes on current subjects written by international panel of numerous contributors. Designed to be an accessible resource, the book includes a basic dictionary of construction contract terminology, many sample letters for Claim Management and a wealth of examples and case studies that offer helpful aids for construction practitioners. The second edition of the text includes: • Updated material in terms of new FIDIC and NEC Forms published in 2017 • Many additional vignettes that clearly exemplify the concepts presented within the text • Information that is appropriate for a global market, rather than oriented to any particular legal system • The essential tools that were highlighted the first edition such as sample letters, dictionary and more • A practical approach to the principles of International Construction Contract Law and construction contract management. Does not get bogged down with detailed legal jargon Written for consulting engineers, lawyers, clients, developers, contractors and construction managers worldwide, the second edition of International Construction Contract Law offers an essential guide to the legal and managerial aspects of large international construction projects.

Construction Law

Delay and disruption in the course of construction impacts upon building projects of any scale. Now in its 5th edition Delay and Disruption in Construction Contracts continues to be the pre-eminent guide to these often complex and potentially costly issues and has been cited by the judiciary as a leading textbook in court decisions worldwide, see, for example, *Mirant v Ove Arup* [2007] EWHC 918 (TCC) at [122] to [135] per the late His Honour Judge Toulmin CMG QC. Whilst covering the manner in which delay and disruption should be considered at each stage of a construction project, from inception to completion and beyond, this book includes: An international team of specialist advisory editors, namely Francis Barber (insurance), Steve Briggs (time), Wolfgang Breyer (civil law), Joe Castellano (North America), David-John Gibbs (BIM), Wendy MacLaughlin (Pacific Rim), Chris Miers (dispute boards), Rob Palles-Clark (money), and Keith Pickavance Comparative analysis of the law in this field in Australia, Canada, England and Wales, Hong Kong, Ireland, New Zealand, the United States

and in civil law jurisdictions Commentary upon, and comparison of, standard forms from Australia, Ireland, New Zealand, the United Kingdom, USA and elsewhere, including two major new forms New chapters on adjudication, dispute boards and the civil law dynamic Extensive coverage of Building Information Modelling New appendices on the SCL Protocol (Julian Bailey) and the choice of delay analysis methodologies (Nuhu Braimah) Updated case law (to December 2014), linked directly to the principles explained in the text, with over 100 helpful "Illustrations" Bespoke diagrams, which are available for digital download and aid explanation of multi-faceted issues This book addresses delay and disruption in a manner which is practical, useful and academically rigorous. As such, it remains an essential reference for any lawyer, dispute resolver, project manager, architect, engineer, contractor, or academic involved in the construction industry.

International Construction Law

Ideal for students taking law modules on construction, surveying, real estate, planning and civil engineering courses, Galbraith's Construction and Land Management Law for Students is an excellent overview of the key legal issues in the built environment. Clearly written and with wide ranging coverage of key legal principles, this textbook highlights the need for students on built environment related courses to access information on how the law relates to their profession, without getting into the heavy detail of the full-scale legal texts. Chapters provide the background to the English legal system before covering key topics such as contract law, tort, health and safety, land law, planning, landlord and tenant, dispute resolution and employment law. All chapters in this seventh edition have been updated with new case law along with statutory and regulatory changes. The improvements include: A new chapter on environmental law An explanation of the new UK/EU relationship following Brexit Details of current JCT 2016 and NEC4 construction contracts Changes to landlords' requirements on letting property The Consumer Rights Act 2015 The Localism Act 2011 The Construction (Design and Management) Regulations 2015
