There are a sufficient number of laboratories and exercises within each lab to tailor the laboratory experience as desired. Then, too, many exercises may be performed as demonstrations rather than as student activities, thereby shortening the time required to cover a particular concept.

Biology & Lab Manual Biology

The Biology Laboratory Manual, 11/e, is written by Dr. Sylvia Mader. With few exceptions, each chapter in the text has an accompanying laboratory exercise in the manual. Every laboratory has been written to help students learn the fundamental concepts of biology and the specific content of the chapter to which the lab relates, and to gain a better understanding of the scientific method.

General Biology 2 Lab Manual

This work is designed for use as a lab manual in college-level courses in developmental biology or animal development. In each exercise, students examine gametes and developing embryos of a single species, and also perform several experiments to probe its developmental process.

Biological Investigations Lab Manual

This new laboratory manual for allied health or general microbiology has been written with the student in mind. The authors have used their years of teaching microbiology and microbiology laboratory at all levels to identify and relate the fundamental concepts that are important to the understanding of the science and students' success in their future field. They have included case studies to exemplify the relevance of the science and extensive visual imagery to help students understand and learn the content. Most importantly, the authors hope this manual will help students experience the thrill of bench science and share some of the enthusiasm they have for microbiology, a field of science that is dynamic, exciting and touches every aspect of your life.
