Its previous edition hailed as "the best reference for the majority of practicing psychiatrists" (Doody's Book Reviews) and a book that "more than any other, provides an approach to how to think about psychiatry that integrates both the biological and psychological" (JAMA), The American Psychiatric Publishing Textbook of Psychiatry has been meticulously revised to maintain this preeminence as an accessible and authoritative educational reference and clinical compendium. It combines the strengths of its three editors -- Robert Hales in clinical and community psychiatry, Stuart Yudofsky in neuropsychiatry, and new co-editor Glen Gabbard in psychotherapy -- in recruiting outstanding authors to summarize the latest developments in psychiatry and features 101 contributors, 65 of whom are new to this edition. - A new chapter on human sexuality and sexual dysfunctions, and another new chapter on treatment of gay, lesbian, bisexual, and transgender patients, equips clinicians to address the entire spectrum of sexual issues and their attendant mental health concerns.
- New chapters on nonpharmacological somatic treatments, supportive psychotherapy, and combination psychotherapy and pharmacotherapy augment the section on psychiatric treatments.
- A new chapter on the assessment of dangerousness -- an individual's propensity to commit violent acts -- presents helpful guidelines for appropriately evaluating and minimizing the risk of violence in both outpatient and inpatient settings.
