Housing Associations and Sustainable Management

This book provides a deep insight into urban regeneration schemes and explores the parameters of what is deemed a sustainable development, before appraising existing schemes' evaluation models for the sustainable return on investment. The authors present a new practical evaluation tool that suggests quantifiable benefits for all urban regeneration stakeholders. This new method enables the gauging of the full sustainable impact, from a given outlay of money invested in a housing-led urban regeneration scheme, through an evidence-based proof and can be used to: Better fulfil sustainability criteria in terms of all three aspects of the triple bottom line and contribute in a more sustainable way to address the United Nation's Sustainable Development Goal 11 Reduce financial waste and plug the gap created by the recent economic shortfall which is impacting on housing associations, tenants and communities alike Evaluate historical housing-led urban regeneration schemes and model future schemes. The method can be used as a strategic decision making or management tool, with schemes being able to be planned in, prioritised or carried out in a targeted and strategic manner; and it can be used for modelling purposes, for publicity purposes and alongside existing tools. This book provides a unique method of fully and sustainably evaluating housing-led urban regeneration schemes, useful for planners, strategic management, local authorities, housing associations, the construction industry and built environment students alike.

Sustainable Urban Regeneration

The embedding of energy efficiency in the management of individual housing organisations is crucial for the realization of current ambitious energy efficiency policies. This issue is examined for the first time in this book through an analysis of selected case studies in new 'green' buildings, as well as in the retrofitting of existing housing, maintenance and budgeting. The links between policy ambitions, practice and housing management institutions are given particular attention. Thus the book is primarily concerned with how ambitions about energy efficiency are carried forward in investment decisions at the housing estate level. Technical and financial issues relevant for this are also addressed. The editors combine a wealth of experience in comparative research on housing policy and housing management with a strong academic background in housing studies and economics. The book aims to be internationally comparative including a range of countries. A chapter will be devoted to each of the following countries:- Sweden; Denmark; Germany; the Netherlands; England; France; Switzerland; Austria; Czech Republic; Slovenia; Canada. The book will appeal to a large audience of students and

academics who are concerned with housing issues, urban policy and politics as well as to those engaged in research in energy efficiency policies in the built environment.

Energy Efficiency in Housing Management

Since the start of the twenty-first century, urban communities have faced increasing challenges in housing affordability, with environmental issues causing additional concern. It is clear that changes to urban housing are needed to enhance the resilience of cities and improve the economic, social and physical well-being of residents. This book provides a comparative cross-national perspective on urban housing and sustainability in Europe, exploring the key barriers and drivers associated with sustainable urban development and community regeneration. Country-specific chapters allow for easy comparison, with each summarizing how sustainable housing operates in the country in question, before going on to discuss the key barriers and drivers at play. This book brings a sustainability perspective to the comparative housing literature which frequently fails to integrate the social, economic and environmental pillars of sustainability. The book outlines many of the changes that professionals and residents will need to make to their practices and cultures in order to enhance housing resilience. Students, researchers and professionals with an interest in sustainable housing creation and regeneration will find this book an invaluable reference.

Sustainable Communities and Urban Housing

The provision and management of social housing for those who are unable to access the housing market is essential to the maintenance of the fabric of society. The social housing industry is vast and still growing. There are very few countries in the world where some form of subsidised housing does not exist, and the total number of social homes is likely to grow worldwide, as are the challenges of the sector. Paul Reeves takes a people-centred approach to the subject, describing the themes that have run through provision of social housing from the first philanthropic industrialists in the 19th Century through to the increasingly complex mixture of ownerships and tenures in the present day. The management of housing forms a key part of the book, with an emphasis on the practical aspects of tenant participation and multi-agency working. The book is ideal for students of housing and social policy, and for housing professionals aiming to obtain qualifications and wanting a broad understanding of the social housing sector.

Introduction to Social Housing

Written by experts, Sustainable Housing brings new perspectives on residential sustainability, using case studies of latest practice. This book is based upon the 'Housing and Sustainability' conference at the RIBA in 1998, which intended to guide action into the next century, setting down key principles, providing important new technical information and setting UK practices in a European context.

Sustainable Housing

"This book provides a deep insight into urban regeneration schemes and explores the parameters of what is deemed a sustainable development, before appraising existing schemes' evaluation models for the sustainable return on investment"--

Sustainable Urban Regeneration

Local regeneration, and action on local issues, is fundamental to the sustainability of local communities. This is especially the case in the UK, with the Government focus on such approaches as Local Enterprise Partnerships and neighbourhood development plans, and further devolution proposals in the pipeline. The Local Regeneration Handbook meets the needs of today's practising "regeneration workers"

Sustainable Development of the Housing Finance System

This edited collection broadens the definition of sustainable real estate based on industry trends, research, and the Paris Climate Agreements. Discussions encompass existing and new buildings throughout their life cycle, the financing of their development and operations, and their impact on the surrounding environments and communities. This broader perspective provides a better understanding of the interconnected nature of the environmental, societal, communal, political, and financial issues affecting sustainable real estate, revealing the wide-ranging impact of practitioners' decisions on

the sustainable real estate system. Bringing together carefully selected articles from leading global academic and practitioner experts from urban planning, design, construction, and finance, this collection brings to light new opportunities and innovative transdisciplinary solutions to as-yet unresolved problems.

Local Regeneration Handbook

Ireland is now an urban society, and both parts of the island have experienced rapid urban-generated growth and new patterns of development in recent years. This inter-disciplinary book adopts an all-Ireland perspective to investigate the tension that exists between sustainable urban development values and rhetoric - such as increased densities, brown field development, the compact city and social inclusion - and the emerging geography of urban Ireland, influenced by consumer and lifestyle choices. The introduction provides an overview of the dynamics of urban change, particularly during the 1990s, and the experience of rapid economic growth. The following chapters are divided into two parts, considering sustainable urban environments, and sustainable communities. This book will appeal to students, academics, policy and decision-makers, given that it adopts both a qualitative and quantitative approach, and introduces a range of new empirical studies covering both physical and social sustainable development.

Sustainable Real Estate

Social Value in Practice offers the reader a simple, accessible guide for considering, creating, and delivering social value in projects and within their organisation. The book connects social value to the global Sustainable Development Goals (SDGs) and presents an insight into the many and different practical ways in which individuals and organisations can make a positive impact towards resolving the 'people, planet and prosperity' agenda: 'Good work' – good practice in managing people, including working conditions, and equality, diversity, and inclusion Education, skills, and employment, including apprenticeships and enhancing the industry image Social procurement and circular supply chains Strategic partnerships and social enterprises Community development, regeneration, and placemaking Construction consultancy Architecture, design, and construction Assessing and measuring social value. Reflective practitioners can pick it up, turn to a chapter, and learn something they can use right away. Through numerous practical examples and think pieces, this book can help readers learn how to create social value, how to improve and build upon current practice, and how to co-create social value in partnership with clients and the supply chain. The authors aim to empower and inspire stakeholders to engage with new ideas and create more value for those using the built environment. This book is a must read for all those involved in procuring, tendering, planning, designing, developing, funding, building, working in, and managing the built environment.

Renewing Urban Communities

The world's population is rapidly urbanizing but the affluence and development often associated with cities are far from equitably or sustainably distributed. Where it was once taken for granted that responsibility for urban development lay with the state, increasingly the emphasis has shifted to market-driven and public-private sector initiatives, which can marginalize the intended beneficiaries - the urban poor - from decision making and implementation. This text outlines the essential conditions for effective urban planning and management by placing bottom-up community initiatives at the heart of the push for equitable and sustainable development in cities. Crucially, the state must engage with both the market and civil society in pursuit of sustainable cities. Presenting a wide-ranging selection of case studies in rapidly urbanizing and transitional countries, from the poorest parts of Africa and Asia to the relatively developed United Kingdom, the authors describe and analyze innovations in how globally disadvantaged urban communities can be engaged in improving their living environments.

Social Value in Practice

This document (which is a corrected edition of the publication first issued in January 2005) sets out the Government's five year plan to create sustainable mixed communities by addressing the varied housing challenges faced in different parts of the country and improving the supply and quality of housing for everyone, including first time buyers, social tenants, key workers and private sector tenants. Proposals for reforms include: investment in housebuilding and infrastructure to tackle housing shortages in the South East, using the private finance initiative; a new Code for Sustainable Buildings, new powers to limit low density development and to protect the Green Belt; measures to help 80,000 first time buyers

and an extension of the Key Worker Living scheme; a new Choice to Own scheme for council and housing association tenants; a new moveUK system to provide information about availability of jobs and homes to offer people the opportunity to move to new areas; improved quality and availability of private rented accommodation; an enhanced strategic role for local authorities in planning housing and growth; investment in housing related services to help older and disabled people live independently; and plans to address homelessness, including halving the number of households living in temporary accommodation by 2010.

Urban Development and Civil Society

Presents a new and comprehensive approach to the study of the regulations pertaining to housing: the institutional regimes framework

Sustainable Communities

Placing a particular focus on the provision of new housing in suburban and rural areas of Southern England, this book explores how the state seeks to adjudicate conflicts around development and conservation.

Sustainable Collective Housing

The UNECE Real Estate Market Advisory Group (REM) is a group of real estate experts who advise the Committee on Urban Development, Housing and Land Management on sustainable real estate markets, working to identify specific measures to strengthen a country's real estate market in a manner that would contribute to economic growth and sustainable development. In 2010, the REM Advisory Group published the "Policy Framework for Sustainable Real Estate Markets", a tool that would help guide the member States to create sustainable real estate markets. However, the emergence of key international agreements, such as the 2030 Agenda for Sustainable Development, the Geneva UN Charter on Sustainable Housing, the New Urban Agenda, the Paris Agreement, and the Basel III Agreement, have led to the establishment of new global and regional policy frameworks for future activities on sustainable urban development at all levels. In response to the request of the Committee to update the Policy Framework to reflect the emergence of such key agreements, the REM Advisory Group produced the current publication, which now also includes updates on the issues such as urbanization, migration and mobility flows, technology and innovation, the growth of emerging markets and asset competition, the change in housing demand oriented towards green buildings and new designs, energy consumption and climate change, and other relevant phenomena. Moreover, this version of the Policy Framework for Sustainable Real Estate Markets maintains that, contrary to the widespread belief that finance and real estate sectors have negative impact on sustainability, they can actually contribute to the achievement of Sustainable Development Goals with the implementation of effective and compatible principles. In particular, this publication shows that these principles can be incorporated by national, local and municipal governments and applied to various forms of real estate.

Rationalities of Planning

This valuable resource for developers and designers will help to develop design solutions sympathetic to the environment and improve the sustainability of residential landscapes. The landscapes around housing have a crucial role in creating a more sustainable future with carbon-neutral homes. This book shows how to improve the sustainable profile of new residential developments through landscape planning, design and management – by conserving resources and minimising pollution, and by enhancing ecological diversity. This may be achieved without significant additional capital outlay. The residential landscape sustainability checklist gives housing developers, landscape architects, architects and planners a tool with which to assess the environmental implication of their schemes throughout the design process – from site planning to detailed design. The checklist focuses on residential housing developments but many features of the tool - including improving energy efficiency, materials selection, planting design and management - can also be applied to a wide range of different types of development, from school grounds to retail parks.

Policy Framework for Sustainable Real Estate Markets

Urban Policy and Practice is a practical and critical guide to urban policy in contemporary Britain. The book covers a range of topics including: * Quality and consumerism in the public sector * Community

development * Public Health * Environmental issues * Local intervention in the creation of skills and jobs
Case studies are drawn from housing, planning, the social services, economic development, and local government finance. Throughout, the concern is for a clear analysis of corporate strategies, democratic control and sustainable development.

Residential Landscape Sustainability

Future Challenges in Sustainable Development within the Built Environment stimulates and reinterprets the demands of Responsible and Sustainable Development in the Built Environment for future action and development. It examines the methods of evaluation, the use of technology, the creation of new models and the role of human factors for examining and developing the subject over the next twenty years.

Urban Policy in Practice

This ground breaking volume raises radical critiques and proposes innovative solutions for social sustainability in the built environment. Urban Social Sustainability provides an in-depth insight into the discourse and argues that every urban intervention has a social sustainability dimension that needs to be taken into consideration, and incorporated into a comprehensive and cohesive 'urban agenda' that is built on three principles of recognition, integration, and monitoring. This should be achieved through a dialogical and reflexive process of decision-making. To achieve sustainable communities, social sustainability should form the basis of a constructive dialogue and be interlinked with other areas of sustainable development. This book underlines the urgency of approaching social sustainability as an urban agenda and goes on to make suggestions about its formulation. Urban Social Sustainability consists of original contributions from academics and experts within the field and explores the significance of social sustainability from different perspectives. Areas covered include urban policy, transportation and mobility, urban space and architectural form, housing, urban heritage, neighbourhood development, and urban governance. Drawing on case studies from a number of countries and world regions the book presents a multifaceted and interdisciplinary understanding from social sustainability in urban settings, and provides practitioners and policy makers with innovative recommendations to achieve more socially sustainable urban environment.

Future Challenges in Evaluating and Managing Sustainable Development in the Built Environment

Sustainable Real Estate in the Developing World offers a perfect and ideal synthesis of works that examine sustainability within various facets of real estate and urban development in the developing world. A must-read for academics, researchers, policy-makers and students in all the built environment disciplines.

Urban Social Sustainability

A review of existing knowledge, experience and research findings to assess why policy implementation failure exists between national strategies and local initiatives.

Policies and Regulations for Sustainable Building

Brings together information on housing production, housing provision and the housing environment, highlighting the theoretical and policy contexts in which housing development takes place as an integrated process.

Sustainable Real Estate in the Developing World

The UNECE Real Estate Market Advisory Group (REM) is a group of real estate experts who advise the Committee on Urban Development, Housing and Land Management on sustainable real estate markets, working to identify specific measures to strengthen a country's real estate market in a manner that would contribute to economic growth and sustainable development. In 2010, the REM Advisory Group published the "Policy Framework for Sustainable Real Estate Markets\

Seeing the Bigger Picture

"After twenty years of sustainable building policies, the issue of environmental impact of buildings and urban environments remains. Policy makers still have difficulties addressing the ambiguous, contested

and dynamic goals encapsulated in the term 'sustainable development'. How to decide between using zinc or PVC gutters, when knowledge and valuation of environmental risks of both keep changing? How can we accommodate urban growth, now that compact cities turn out to be urban heat islands?" "Greening governance identifies how policy makers can deal with these contested questions. The book draws on policy network theories that consider stakeholder interaction, negotiation and learning as conditions for policy success. By understanding these conditions from an evolutionary viewpoint it provides a new perspective for governance. The concepts of generative variety, selective retention and regeneration will help policy makers to prioritize and select contested alternatives while also focusing on more long term and ambitious policy goals. The book is of interest to policy makers and scientists concerned with both the practical and theoretical issues of sustainable built environments." --Book Jacket.

Housing Development

"Urban renewal through the large-scale restructuring of post-war neighbourhoods is a major challenge throughout Europe in the decades ahead. Current urban restructuring programmes in the Netherlands focus on the demolition and replacement of the existing housing stock. The motivation behind this strategy is creating a better social mix between poor and better-off households, to improve the general quality of the housing stock and to create a financially viable restructuring programme. The general aim is to improve various aspects of sustainability in urban neighbourhoods. Are demolition and replacement strategies the most effective and efficient way to achieve this objective? In this book, we examine the effects of demolition and replacement strategies on sustainability from different perspectives. An economic perspective: the market position and the value of the neighbourhoods, a social perspective: the levels of social capital and residential stability, and an environmental perspective: the energy efficiency and the use of materials in restructuring strategies."

Policy Framework for Sustainable Real Estate Markets

With the built environment contributing almost half of global greenhouse emissions, there is a pressing need for the property and real estate discipline to thoroughly investigate sustainability concerns. The Routledge Handbook of Sustainable Real Estate brings together the latest research of leading academics globally, demonstrating the nature and extent of the impact as well as suggesting means of mitigating humankind's impact and building resilience. Four sections examine the different aspects of sustainable real estate: governance and policy valuation, investment and finance management redevelopment and adaptation. Covering all land uses from residential to commercial, retail and industrial, the Routledge Handbook of Sustainable Real Estate is an exciting mixture of received wisdom and emerging ideas and approaches from both the developed and developing world. Academics, upper-level students and researchers will find this book an essential guide to the very best of sustainable real estate research.

Greening Governance

This book is an ideal complement to studies showing the potentially devastating ecological effects of climate change, studies trying to calculate the costs of climate change, and studies trying to identify the most pressing needs in preparing for the new climate.

Sustainable Neighbourhood Transformation

How is London responding to social and economic crises, and to the challenges of sustaining its population, economy and global status? Sustainable development discourse has come to permeate different policy fields, including transport, housing, property development and education. In this exciting book, authors highlight the uneven impacts and effects of these policies in London, including the creation of new social and economic inequalities. The contributors seek to move sustainable city debates and policies in London towards a progressive, socially just future that advances the public good. The book is essential reading for urban practitioners and policy makers, and students in social, urban and environmental geography, sociology and urban studies.

Routledge Handbook of Sustainable Real Estate

In *Creating Community-Led and Self-Build Homes*, Martin Field explores the ways in which people and communities across the UK have been striving to create the homes and neighbourhood communities

they want. Giving context to contemporary practices in the UK, the book examines 'self-build housing' and 'community-led housing', discussing the commonalities and distinctions between these in practice, and what could be learned from other initiatives across Europe. Individual methods and models of local practice are explored - including cohousing, cooperatives, community land trusts, empty homes and other intentional communities - and an examination is made of what has constrained such initiatives to date and how future policies and practice might be shaped.

Images of the Future City

In order to tackle the problem of the shortage of affordable housing, the Office of the Deputy Prime Minister (ODPM) has been set a Public Service Agreement (PSA) target to achieve a better balance between housing availability and demand in all English regions whilst ensuring sustainable development which recognises environmental concerns. This joint study by the Audit Commission and National Audit Office focuses on one strand of the PSA target, relating to improving the availability of affordable housing in high demand areas. The report also identifies ten areas where efficiencies are likely to be achieved in the social housing funding system, and it makes a number of recommendations for national, regional and local bodies to improve both efficiency and effectiveness of the delivery chain, highlighting the need to increase the speed of delivery and to reduce the unit cost of housing.

Sustainable London?

This new book explores how the professions responsible for enhancing the built environment's sustainability seek to deliver this new agenda, offering multi-perspective case studies and discussion to argue for a rethinking of the role of urban development professional. Showing how sustainability is rapidly becoming the norm for practitioners, the authors consider new types of professional knowledge, relationships between planning systems and property development, links between public and private sector organisations, ideas about long term responsibilities and new working practices for engaging with the public.

Creating Community-Led and Self-Build Homes

This work aims to provide a possible specification of the problems involved in greening the built environment and an articulation of the solutions. It begins with a discussion of sustainability as a concept and its applicability to contemporary towns and cities. The following chapters take up particular aspects of the built environment and sustainability in greater depth and include the construction industry, transport, health, planning, community and equity issues, employment and the economy. The links between environmental damage, poverty and the economy are all themes in this book which also focuses on interconnections and on solutions to these three problems. The final chapter explains how the achievement of sustainable development is, in the authors' opinion, dependent on detailed solutions to everyday problems of modern society.

Building More Affordable Homes

Sustainable development is about meeting today's needs without compromising the ability of future generations to meet their own. For Habitat II this means human settlements which meet the economic and social needs of their inhabitants and visitors while reducing damage to the environment to levels that do not endanger longer term viability. The focus of this national agenda is on the UK's urban areas. Its purpose is to record what is actually being done and what is planned to improve the quality of life in cities, towns and villages in ways which are consistent with the aims of sustainable development.

Sustainable Urban Development Volume 4

Sustainable housing is generally used to describe housing that is environmentally friendly and resource-efficient over the lifetime of the building. Homes are designed to have the least possible negative impact on the environment. This means energy efficiency, avoiding environmental toxins, and responsibly using materials and resources while having positive physical and psychological effects on inhabitants. This book presents a comprehensive overview of sustainable housing, starting from legislation and ending with the design and configuration of homes.

Greening the Built Environment

The English planning system is in crisis, argue the authors of this provocative new book. Reflecting on controversial new Government reforms and deregulation, Kate Henderson and Hugh Ellis provide a comprehensive analysis of these reforms, assessing the implications and significance for the future. They highlight why planning is so essential to quality of life and set out 10 evidence-based steps to rebuild the planning system in England. Drawing on policy and practice examples from across the UK and internationally, the book is a manifesto for change. It provides a direct and vigorous challenge to the current structure and policy of planning that should ignite a debate about the values that shape its future.

Sustainable Settlements and Shelter

This Special Issue explores the cross-disciplinary approaches, methodologies, and applications of socio-environmental vulnerability assessment that can be incorporated into sustainable management. The volume comprises 20 different points of view, which cover environmental protection and development, urban planning, geography, public policymaking, participation processes, and other cross-disciplinary fields. The articles collected in this volume come from all over the world and present the current state of the world's environmental and social systems at a local, regional, and national level. New approaches and analytical tools for the assessment of environmental and social systems are studied. The practical implementation of sustainable development as well as progressive environmental and development policymaking are discussed. Finally, the authors deliberate about the perspectives of social-environmental systems in a rapidly changing world.
