

What Makes Us Human

[#humanity](#) [#consciousness](#) [#human nature](#) [#emotions](#) [#defining humanity](#)

Delve into the profound and multifaceted question: what makes us human? This exploration uncovers the core elements of humanity, examining our unique capacity for consciousness, complex emotions, intricate social structures, and our innate drive for meaning. Discover the defining humanity that shapes our existence and distinguishes us in the natural world, prompting reflection on human nature itself.

What Makes Us Human?

How and why did we become who we are? In "What Makes Us Human?" some of the world's most brilliant thinkers offer their answers to this perennial puzzle, including Susan Blackmore, Robin Dunbar, Susan Greenfield, Richard Harries, Enan Malik, Richard Wrangham, Ian Tattersall, and Lewis Wolpert. Together, they draw on a broad spectrum of disciplines, from anthropology, biochemistry, medicine, and neuroscience, to philosophy, psychology, and religion, to ask what makes us distinctively human. Is it our cognitive abilities, or our useful tools, our story-telling, our beliefs, our curiosity, our ability to cook, or our culture? Are we half-ape or half-angel? "What Makes Us Human?" explains how and why our ancestors adapted to their surroundings to produce such clever, talented, and unlikely progeny. It is for all to enjoy.

In the Light of Evolution

The Arthur M. Sackler Colloquia of the National Academy of Sciences address scientific topics of broad and current interest, cutting across the boundaries of traditional disciplines. Each year, four or five such colloquia are scheduled, typically two days in length and international in scope. Colloquia are organized by a member of the Academy, often with the assistance of an organizing committee, and feature presentations by leading scientists in the field and discussions with a hundred or more researchers with an interest in the topic. Colloquia presentations are recorded and posted on the National Academy of Sciences Sackler colloquia website and published on CD-ROM. These Colloquia are made possible by a generous gift from Mrs. Jill Sackler, in memory of her husband, Arthur M. Sackler.

What Makes Us Human?

A dazzling insight into what gives meaning to our life and to us as a species. What makes us human? From Carlo Rovelli on the particles of dust that make us, to Caitlin Moran on the joy of Friday nights, and A C Grayling on how we express ourselves through culture: this illuminating book shares 130 mind-expanding answers to that question. We all want to understand our place in the universe and find a sense of purpose in the life. This book will help the reader navigate that journey with the help

of leading names from the worlds of literature, history, philosophy, politics, sport, comedy and popular culture. Originally broadcast as a popular feature on the Jeremy Vine Show, *What Makes Us Human?* includes short essays from: Andrew Marr, Carlo Rovelli, Marian Keyes, Alain de Botton, Robert Webb, Richard Dawkins, Stephen Fry, and many more.

How Water Makes Us Human

This book is about how water becomes people – or, put another way, how people and water flow together and shape each other. While the focus of the book is on the relationships held between water and people, it also has a broader message about human relationships with the environment generally – a message that illustrates not only that people are existentially entangled with the material world, but that the materials of the world shape, determine and enable humans to be ‘humans’ in the ways that they are. Offering a selection of anthropological examples from Kenya, Wales and Spain to illustrate how water’s materiality coproductively generates the way people are able to engage with water, this book uses cross-disciplinary perspectives to provide and promote a new analytic – one that encourages ethical, holistic and sustainable relationships with the world around us. This approach challenges representations that ignore, sidestep or are blind to the fleshy materiality of being human, and aims to encourage a re-imagining of the world that acknowledges humanity as intrinsically active-with and part of the fabric of the collection of materials we call planet Earth.

The Descent of Man, and Selection in Relation to Sex

In the current resurgence of interest in the biological basis of animal behavior and social organization, the ideas and questions pursued by Charles Darwin remain fresh and insightful. This is especially true of *The Descent of Man and Selection in Relation to Sex*, Darwin's second most important work. This edition is a facsimile reprint of the first printing of the first edition (1871), not previously available in paperback. The work is divided into two parts. Part One marshals behavioral and morphological evidence to argue that humans evolved from other animals. Darwin shows that human mental and emotional capacities, far from making human beings unique, are evidence of an animal origin and evolutionary development. Part Two is an extended discussion of the differences between the sexes of many species and how they arose as a result of selection. Here Darwin lays the foundation for much contemporary research by arguing that many characteristics of animals have evolved not in response to the selective pressures exerted by their physical and biological environment, but rather to confer an advantage in sexual competition. These two themes are drawn together in two final chapters on the role of sexual selection in humans. In their Introduction, Professors Bonner and May discuss the place of *The Descent* in its own time and relation to current work in biology and other disciplines.

What Makes Us Human?

In *What Makes Us Human?* some of the world's most brilliant thinkers offer their answers to this perennial puzzle, including Susan Blackmore, Robin Dunbar, Richard Harries, Kenan Malik and Lewis Wolpert. Together they draw on a broad spectrum of disciplines, from anthropology, medicine, and neuroscience, to philosophy, psychology and religion, to ask what makes us distinctively human. Is it our cognitive abilities, our use of tools, our story-telling, our beliefs, our curiosity, our ability to cook, or our culture?

How Culture Makes Us Human

What separates modern humans from our primate cousins—are we a mere blink in the march of evolution, or does human culture represent the definitive evolutionary turn? Dwight Read explores the dilemma in this engaging, thought-provoking book, taking readers through an evolutionary odyssey from our primate beginnings through the development of culture and social organization. He assesses the two major trends in this field: one that sees us as a logical culmination of primate evolution, arguing that the rudiments of culture exist in primates and even magpies, and another that views the human transition as so radical that the primate model provides no foundation for understanding human dynamics. Expertly synthesizing a wide body of evidence from the anthropological and life sciences in accessible prose, Read's book will interest a broad readership from experts to undergraduate students and the general public.

What Makes Us Human?

What happened along the evolutionary trail that made humans so unique? In his accessible style, Michael Gazzaniga pinpoints the change that made us thinking, sentient humans different from our predecessors. He explores what makes human brains special, the importance of language and art in defining the human condition, the nature of human consciousness, and even artificial intelligence.

Human

'There are two ways to open a child's head. The pretty way and the quick way. Usually I shave the hair, use a scalpel to nick the skin then apply an electro-cautery device to burn down to bone level. It's a slow, precise method and it leaves almost no scarring. But it takes time. Time, the interminable single note of the heart monitor reminds me, I don't have.' _____ Jay Jayamohan makes life and death decisions on a daily basis. That's because he's a Consultant Paediatric Neurosurgeon in a busy Oxford hospital. Every day, parents put all their faith in him to make their sick children well again. Though he is proud of his successes, he is haunted by every failure. Jayamohan is known not only for his skill in surgery but also his human touch: to him, no patient is only a number. In this gripping and sometimes heartrending book, Jayamohan - who has featured in two highly acclaimed BBC fly-on-the-wall series following the work of neurosurgeons - brings the highs and lows of the operating theatre into vivid life. Beginning with his struggles as an Asian growing up in 1970s Britain, he chronicles his early days as a medical student and spans decades of extraordinary activity, drawing on case studies from various aspects of his career: not all of which have happy endings. Jayamohan describes how he found the strength to keep going despite terrible setbacks: no matter how many times he is knocked down, he always gets up again to face the next challenge. Everything That Makes Us Human is a pacy, gripping account of Jayamohan's life and work. He pulls no punches and owns his mistakes, but the complete picture is one of a man driven to save as many lives as possible.

Everything That Makes Us Human

Regulation : how the politics of skill become law -- Production : how skill makes cities -- Skill : how skill is embodied and what it means for the control of bodies -- Protest : how skillful practice becomes resistance -- Body : how definitions of skill cause injury -- Earth : how the politics of skill shape responses to climate change.

Does Skill Make Us Human?

Acclaimed author Matt Ridley's thrilling follow-up to his bestseller Genome. Armed with the extraordinary new discoveries about our genes, Ridley turns his attention to the nature versus nurture debate to bring the first popular account of the roots of human behaviour.

Nature via Nurture: Genes, experience and what makes us human

Me, I'm a gangster. The police know me. Until recently, my job was to rob banks and to rape girls. Now, I realise that my life is more important than that! This is Kasure talking. He lives in Goroka, Papua New Guinea. What caused this change? When Jean-Louis Lamboray and 11 people from all continents launched the Constellation in 2004, they took the prism of our shared humanity to challenge the status quo. They dreamed of a world where communities would take charge of their own lives and connect for sharing and support. They would not teach nor preach but appreciate community strengths. They would not evaluate communities, but communities would assess themselves and learn from their actions. At the outset, Jean-Louis and his friends could only count on their own strengths to inch towards their dream. Now they celebrate a positive epidemic as in more than sixty countries thousands of communities mobilise their own strengths to address their concerns, shape their dream and act to fulfil it. Told with the simplicity of troubadours and of African storytellers this story of stories invites you to reflect and to trust in your own strengths as you join others to address collective challenges. And this is only the beginning of the journey Jean-Louis Lamboray is one of the world's most impressive public health doctors. Lamboray's ideas are original and brilliant, and they've worked in practice. Richard Preston, contributor to The New Yorker, currently working on a successor book to The Hot Zone. At the Ministry of Health of Senegal, we try very hard to stimulate community ownership of health issues. Jean-Louis's book will help us take further action. Awa-Marie Coll-Seck, Minister of Health and Social Affairs, Senegal.

What Makes Us Human?

The knowledge on human biology is blooming. Progresses in genomics, epigenetics, neurobiology, human evolution, population genetics, and prehistory is extremely fast presently. However, few bridges have been launched between these fields on one hand, and human sciences (ethics, politics, psychoanalysis, philosophy) on the other hand. Now knowledge on human nature and on what makes us specifically humans do need tight collaborations between biological and human sciences. One of the specific goals of the book is to sort out, in our knowledge on human nature, what is: (i) strongly supported; (ii) still speculative; (iii) still extremely tentative; (iv) obviously (sometimes purposely) misleading; (v) definitely to be rejected. Such a sorting out is sorely needed, since this theme is politically loaded and full of propaganda, storytelling and "fake news". This kind of endeavor is urgent because there is now a strong tendency in the general public to lose confidence in science and to believe in alternate sources of knowledge with uncertain backgrounds (social networks, internet). This book uniquely offers a thorough discussion, based on biology as well as on human sciences, on major societal debates of the time, such as origin of humankind, human genetic diversity, biology of cognition, science in front of intolerant ideologies, science and religion, and science and creationism/intelligent design. Its specific feature is sorted by the present states of knowledge, what is robust, then still speculative, unintentionally or intentionally ("scientific fake news") misleading, and obviously wrong. Thorough updating is based on more than 300 references from the specialized literature as well as from the general media. The book, which is written in an accessible language and is completed with a glossary of specialized terms, will be therefore profitable to specialists of the concerned fields, university professors, teachers, students, as well as the general public.

What Makes Us Humans

Drawing on the latest scientific research and her own work with animals, the author discusses the emotional needs of animals and how to fulfill them, challenging common myths about animal emotions, mental stimulation, and emotional well-being.

Animals Make Us Human

Winner of the William James Book Award "Magisterial...Makes an impressive argument that most distinctly human traits are established early in childhood and that the general chronology in which these traits appear can at least—and at last—be identified." —Wall Street Journal "Theoretically daring and experimentally ingenious, *Becoming Human* squarely tackles the abiding question of what makes us human." —Susan Gelman, University of Michigan Virtually all theories of how humans have become such a distinctive species focus on evolution. *Becoming Human* proposes a complementary theory of human uniqueness, focused on development. Building on the seminal ideas of Vygotsky, it explains how those things that make us most human are constructed during the first years of a child's life. In this groundbreaking work, Michael Tomasello draws from three decades of experimental research with chimpanzees, bonobos, and children to propose a new framework for psychological growth between birth and seven years of age. He identifies eight pathways that differentiate humans from their primate relatives: social cognition, communication, cultural learning, cooperative thinking, collaboration, prosociality, social norms, and moral identity. In each of these, great apes possess rudimentary abilities, but the maturation of humans' evolved capacities for shared intentionality transform these abilities into uniquely human cognition and sociality.

Becoming Human

Explores how many of the things once considered to be exclusively human are not: we are not the only species that communicates, makes tools, utilises fire, or has sex for reasons other than to make new versions of ourselves. Evolution has, however, allowed us to develop our culture to a level of complexity that outstrips any other observed in nature

The Book of Humans

What does it mean to be human? The classic answer is that we have a special kind of intelligence. But to understand what we are as humans, we also need to know what we are like motivationally. In this work, Dr. Higgins describes how our human motivation for shared reality evolved in our species, and how it develops in our children as shared feelings, shared practices, and shared goals and roles.--taken from book jacket

Shared Reality

Explores the latest beliefs about why people tell stories and what stories reveal about human nature, offering insights into such related topics as universal themes and what it means to have a storytelling brain.

The Storytelling Animal

In this stunningly original book, Richard Wrangham argues that it was cooking that caused the extraordinary transformation of our ancestors from apelike beings to *Homo erectus*. At the heart of *Catching Fire* lies an explosive new idea: the habit of eating cooked rather than raw food permitted the digestive tract to shrink and the human brain to grow, helped structure human society, and created the male-female division of labour. As our ancestors adapted to using fire, humans emerged as "the cooking apes". Covering everything from food-labelling and overweight pets to raw-food faddists, *Catching Fire* offers a startlingly original argument about how we came to be the social, intelligent, and sexual species we are today. "This notion is surprising, fresh and, in the hands of Richard Wrangham, utterly persuasive ... Big, new ideas do not come along often in evolution these days, but this is one." -Matt Ridley, author of *Genome*

Catching Fire

The perfect starting point for any student new to this fascinating subject, offering a serious yet accessible introduction to anthropology. Across a series of fourteen chapters, *Introducing Anthropology* addresses the different fields and approaches within anthropology, covers an extensive range of themes and emphasizes the active role and promise of anthropology in the world today. The new edition foregrounds in particular the need for anthropology in understanding and addressing today's environmental crisis, as well as the exciting developments of digital anthropology. This book has been designed by two authors with a passion for teaching and a commitment to communicating the excitement of anthropology to newcomers. Each chapter includes clear explanations of classic and contemporary anthropological research and connects anthropological theories to real-life issues at the local and global levels. The vibrancy and importance of anthropology is a core focus of the book, with numerous interviews with key anthropologists about their work and the discipline as a whole, and plenty of ethnographic studies to consider and use as inspiration for readers' own personal investigations. A clear glossary, a range of activities and discussion points, and carefully selected further reading and suggested ethnographic films further support and extend students' learning. *Introducing Anthropology* aims to inspire and enthuse a new generation of anthropologists. It is suitable for a range of different readers, from students studying the subject at school-level to university students looking for a clear and engaging entry point into anthropology.

Introducing Anthropology

There exists an undeniable chasm between the capacities of humans and those of animals. Our minds have spawned civilizations and technologies that have changed the face of the Earth, whereas even our closest animal relatives sit unobtrusively in their dwindling habitats. Yet despite longstanding debates, the nature of this apparent gap has remained unclear. What exactly is the difference between our minds and theirs? In *The Gap*, psychologist Thomas Suddendorf provides a definitive account of the mental qualities that separate humans from other animals, as well as how these differences arose. Drawing on two decades of research on apes, children, and human evolution, he surveys the abilities most often cited as uniquely human -- language, intelligence, morality, culture, theory of mind, and mental time travel -- and finds that two traits account for most of the ways in which our minds appear so distinct: Namely, our open-ended ability to imagine and reflect on scenarios, and our insatiable drive to link our minds together. These two traits explain how our species was able to amplify qualities that we inherited in parallel with our animal counterparts; transforming animal communication into language, memory into mental time travel, sociality into mind reading, problem solving into abstract reasoning, traditions into culture, and empathy into morality. Suddendorf concludes with the provocative suggestion that our unrivalled status may be our own creation -- and that the gap is growing wider not so much because we are becoming smarter but because we are killing off our closest intelligent animal relatives. Weaving together the latest findings in animal behavior, child development, anthropology, psychology, and neuroscience, this book will change the way we think about our place in nature. A major argument for reconsidering what makes us human, *The Gap* is essential reading for anyone interested in our evolutionary origins and our relationship with the rest of the animal kingdom.

The Gap

Our capacity to care about the wellbeing of others, whether they are close family or strangers, can appear to be unimportant in today's competitive societies. However, in this volume Penny Spikins argues that compassion lies at the heart of what makes us human. She takes us on a journey from the earliest stone age societies two million years ago to the lives of Neanderthals in Ice Age Europe, using archaeological evidence to illustrate the central role that emotional connections had in human evolution. Simple acts of kindness left to us from millions of years ago provide evidence for how social emotions and morality evolved, and how our capacity to reach out beyond ourselves into the lives of others allowed us to work together for a common good, and form the basis for human success.

How Compassion Made Us Human

"How do you go from a bunch of cells to something that can think?" This question, asked by the 9-year-old son of one of the authors, speaks to a puzzle that lies at the heart of this book. How are we as humans able to explore such questions about our own origins, the workings of our mind, and more? In this fascinating volume, developmental psychologists Jeremy Carpendale and Charlie Lewis delve into how such human capacities for reflection and self-awareness pinpoint a crucial facet of human intelligence that sets us apart from closely related species and artificial intelligence. Richly illustrated with examples, including questions and anecdotes from their own children, they bring theories and research on children's development alive. The accessible prose shepherds readers through scientific and philosophical debates, translating complex theories and concepts for psychologists and non-psychologists alike. What Makes Us Human is a compelling introduction to current debates about the processes through which minds are constructed within relationships. Challenging claims that aspects of thinking are inborn, Jeremy Carpendale and Charlie Lewis provide a relationally grounded way of understanding human development by showing how the uniquely human capacities of language, thinking, and morality develop in children through social processes. They explain the emergence of communication within the rich network of relationships in which babies develop. Language is an extension of this earlier communication, gradually also becoming a tool for thinking that can be applied to understanding others and morality. Learning more about the development of what is right in front of us, such as babies' actions developing into communicative gestures, leads to both greater appreciation of the children in our lives and a grasp of what makes us human. This book will be of interest to anyone curious about the nature of language, thinking, and morality, including students, parents, teachers, and professionals working with children.

What Makes Us Human: How Minds Develop through Social Interactions

FROM THE BESTSELLING AUTHOR OF A BRIEF HISTORY OF EVERYONE WHO EVER LIVED and HOW TO ARGUE WITH A RACIST WHAT MAKES US HUMAN? Waging war? Sex for pleasure? Creating art? Mastery of fire? In this thrilling tour of the animal kingdom, Adam Rutherford tells the story of how we became the unique creatures we are today. Illuminated by the latest scientific discoveries, THE BOOK OF HUMANS is a dazzling compendium of what unequivocally fixes us as animals, and reveals how we are extraordinary among them. *** 'Adam Rutherford is a superb communicator, who eruditely explores the borderlands of history, archaeology, genetics and anthropology in this fascinating tour of our species' DAN SNOW 'This superbly accessible discussion about who we humans really are is important and necessary' CHRIS PACKHAM 'Charming, compelling and packed with information. I learned more about biology from this short book than I did from years of science lessons' PETER FRANKOPAN 'An outstandingly clear and witty account that shows beyond doubt how much we are part of the animal world, and yet at the same time how different we have become' HENRY MARSH

The Book of Humans

Selected for the White Ravens 2023 catalogue, by the International Youth Library in Munich, Germany (Brazilian Portuguese edition) Selected for the dPICTUS Unpublished Picture Book Showcase 4 (2022 edition), receiving 14 votes from a panel of 50 international publishers. Selected for the 2023 Bologna Children's Book Fair exhibition Beauty and the World: The New Nonfiction Picture Books (March 5, 2023, Bologna) Published in partnership with UNESCO in many editions in association with the UNESCO International Decade of Indigenous Languages A poetic riddle about language, history, and culture, released in partnership with UNESCO in honor of the International Decade of Indigenous Languages (2022-2032). Can you guess what I am? I have been around a very, very long time. You hardly knew me as a baby, but now you cannot get me out of your head. There are thousands of me,

all over the globe, and some of those forms are disappearing. I can connect you to the past, present, and future. Who am I—and why am I so important to humanity? Clever and thought-provoking, *What Makes Us Human* is an accessible introduction to how language connects people across the world. This unique book celebrates all the amazing ways communication shapes our lives, including through text messages on phones, Braille buttons in elevators, and endangered languages at risk of disappearing.

What Makes Us Human

A meticulously clear account of how early ape-men of the African savanna developed into fully human beings. Leakey has always been interested in far more than the mere physical features presented by fossils, and here he is particularly concerned with non-tangible human attributes, such as art, language and consciousness itself. Leakey's personal involvement in many of the key discoveries of hominid fossils, and his friendships and rivalries with his fellow fossil hunters, add more than a dash of spice to his narrative. "An outstanding account of our current understanding of human evolution" *Sunday Times* "An elegant summary of what is currently known about human evolution" *Observer*

The Origin Of Humankind

Introduction: are we smart? -- Rational illusions -- Structure and origins of inductive bias -- Learning from others -- Good questions -- How to never be wrong -- Seeing patterns -- Are we consistent? -- Celestial teapots and flying spaghetti monsters -- The frugal brain -- Language design -- The uses of randomness -- Conclusion: what makes us smart.

What Makes Us Smart

The first truly global history of work, an upbeat assessment from the age of the hunter-gatherer to the present day. We work because we have to, but also because we like it: from hunting-gathering over 700,000 years ago to the present era of zoom meetings, humans have always worked to make the world around them serve their needs. Jan Lucassen provides an inclusive history of humanity's busy labor throughout the ages. Spanning China, India, Africa, the Americas, and Europe, Lucassen looks at the ways in which humanity organizes work: in the household, the tribe, the city, and the state. He examines how labor is split between men, women, and children; the watershed moment of the invention of money; the collective action of workers; and at the impact of migration, slavery, and the idea of leisure. From peasant farmers in the first agrarian societies to the precarious existence of today's gig workers, this surprising account of both cooperation and subordination at work throws essential light on the opportunities we face today.

The Story of Work

Richard Leakey's personal account of his fossil hunting and landmark discoveries at Lake Turkana, his reassessment of human prehistory based on new evidence and analytic techniques, and his profound pondering of how we became "human" and what being "human" really means.

Origins Reconsidered

This open access book – as the title suggests – explores some of the historical roots and epistemological ramifications of perspectivism. Perspectivism has recently emerged in philosophy of science as an interesting new position in the debate between scientific realism and anti-realism. But there is a lot more to perspectivism than discussions in philosophy of science so far have suggested. Perspectivism is a much broader view that emphasizes how our knowledge (in particular our scientific knowledge of nature) is situated; it is always from a human vantage point (as opposed to some Nagelian "view from nowhere"). This edited collection brings together a diverse team of established and early career scholars across a variety of fields (from the history of philosophy to epistemology and philosophy of science). The resulting nine essays trace some of the seminal ideas of perspectivism back to Kant, Nietzsche, the American Pragmatists, and Putnam, while the second part of the book tackles issues concerning the relation between perspectivism, relativism, and standpoint theories, and the implications of perspectivism for epistemological debates about veritism, epistemic normativity and the foundations of human knowledge.

Knowledge from a Human Point of View

What makes us human? How did we develop language, thought and culture? Why did we survive, and other human species fail? The past 12,000 years represent the only time in the sweep of human history when there has been only one human species. How did this extraordinary proliferation of species come about - and then go extinct? And why did we emerge such intellectual giants? The tale of our origins has inevitably been told through the 'stones and bones' of the archaeological record, yet Robin Dunbar shows it was our social and cognitive changes rather than our physical development which truly made us distinct from other species.

Human Evolution

A groundbreaking endeavor that explores human spirituality using the evolving technology of artificial intelligence. Why are we here? What does it mean to love? How do we overcome suffering? Why do we feel so alone? Is happiness truly possible? For thousands of years, humanity has turned to the same sacred texts to explore these universal questions--from the Bible and the Tao Te Ching, to the poetry of Rumi and Sappho, to modern-day mystics. What if you could take all of the wisdom contained within these collective pages and, using the world's most advanced artificial intelligence, receive the answers? Thanks to OpenAI, a nonprofit research lab cofounded by Elon Musk and other tech luminaries, this is now possible. OpenAI's mission is to ensure that artificial intelligence serves the betterment of humanity--and *What Makes Us Human?* offers an innovative exploration of AI's potential in this realm. To create this first-of-its-kind book, international bestselling poet Iain S. Thomas and prodigious researcher and innovator Jasmine Wang collaborated with OpenAI's GPT-3, an advanced artificial intelligence. Wang and Thomas prompted GPT-3 with thousands of humanity's greatest texts, and then asked GPT-3 our most pressing questions. Contained in this book are the conversations and exchanges that followed. A bold, daring experiment, *What Makes Us Human?* is a contemporary exploration of spirituality that will inspire a new understanding of what makes us humans, humans.

What Makes Us Human

A bold, illuminating new take on the love of animals that drove human evolution. Why do humans all over the world take in and nurture other animals? This behavior might seem maladaptive—after all, every mouthful given to another species is one that you cannot eat—but in this heartening new study, acclaimed anthropologist Pat Shipman reveals that our propensity to domesticate and care for other animals is in fact among our species' greatest strengths. For the last 2.6 million years, Shipman explains, humans who coexisted with animals enjoyed definite adaptive and cultural advantages. To illustrate this point, Shipman gives us a tour of the milestones in human civilization—from agriculture to art and even language—and describes how we reached each stage through our unique relationship with other animals. *The Animal Connection* reaffirms our love of animals as something both innate and distinctly human, revealing that the process of domestication not only changed animals but had a resounding impact on us as well.

The Animal Connection: A New Perspective on What Makes Us Human

Why is a forgery worth so much less than an original work of art? What's so funny about someone slipping on a banana peel? Why, as Freud once asked, is a man willing to kiss a woman passionately, but not use her toothbrush? And how many times should you baptize a two-headed twin? Descartes' Baby answers such questions, questions we may have never thought to ask about such uniquely human traits as art, humour, faith, disgust, and morality. In this thought-provoking and fascinating account of human nature, psychologist Paul Bloom contends that we all see the world in terms of bodies and souls. Even babies have a rich understanding of both the physical and social worlds. They expect objects to obey principles of physics, and they're startled when things disappear or defy gravity. They can read the emotions of adults and respond with their own feelings of anger, sympathy and joy. This perspective remains with us throughout our lives. Using his own researches and new ideas from philosophy, evolutionary biology, aesthetics, theology, and neuroscience, Bloom shows how this way to making sense of reality can explain what makes us human. The myriad ways that our childhood views of the world undergo development throughout our lives and profoundly influences our thoughts, feelings, and actions is the subject of this richly rewarding book.

Descartes' Baby

"I couldn't stop reading until I finished it. This book should be widely read!" - JAMES LOVELOCK "I'm glad I read it. A literate and stylish writer." - RICHARD DAWKINS "I think you're right." - STEVEN

PINKER What makes us human? Why are we the only animals who wear clothes, drive cars, trawl the internet, and fly helicopters on Mars? It's all because we've learnt to talk: yet remarkably, we still don't know how we did it. SPEECH! suggests an answer that's been hiding in plain sight - the simple yet radical shift that turned our analog grunts and shrieks into words. But its consequences are far from simple: being able to share ideas through language was an evolutionary tipping point - it allowed us to link up our minds. SPEECH! traces our roller-coaster ride with language from hunter-gatherer to urban hipster: the epic tale of the struggle for knowledge against the false gods of culture, religion and identity - as we teeter toward a destination we may still resist, but ultimately cannot escape. About the author: Simon Prentis has spent a lifetime working with other cultures and languages in over fifty countries. A veteran translator and interpreter of Japanese, his clients have ranged from academic and international institutions to cultural icons like Paul McCartney, Stanley Kubrick, Frank Zappa and Yoko Ono. A graduate of Oxford University, and a member of the Institute of Translation and Interpreting since 1990, he has worked extensively with the broadcast media, given expert testimony in high-profile intellectual property disputes, translated four books and reams of technical documents, and presented papers on translation and interpreting at international conferences. This is his first book. "Crisp and clear - I agree with your hypothesis." - DESMOND MORRIS "Bravo! A compelling read." - YOKO ONO "If you liked Sapiens, you're going to love this." - JEE MANDAYO

SPEECH! How Language Made Us Human

The Imagination Gap helps leaders in every sector apply their imagination effectively to explore new, creative approaches to survive and thrive. Examples from a range of industries and settings, from Broadway to Silicon Valley, with simple steps and exercises, help you stop thinking the way you "should" and start making extraordinary things happen.

The Imagination Gap

The New York Times—bestselling author of The Compass of Pleasure examines how our sense of touch is interconnected with our emotions Dual-function receptors in our skin make mint feel cool and chili peppers hot. Without the brain's dedicated centers for emotional touch, an orgasm would feel more like a sneeze—convulsive, but not especially nice. From skin to nerves to brain, the organization of our body's touch circuits is a complex and often counterintuitive system that affects everything from our social interactions to our general health and development. In Touch, neuroscientist and bestselling author David J. Linden explores this critical interface between our bodies and the outside world, between ourselves and others. Along the way, he answers such questions as: Why do women have more refined detection with their fingertips than men? Is there a biological basis for the use of acupuncture to relieve pain? How do drugs like Ecstasy heighten and motivate sensual touch? Why can't we tickle ourselves? Linking biology and behavioral science, Touch offers an entertaining and enlightening answer to how we feel in every sense of the word.

Touch

Inspired by the abundance of unique personalities available on dating websites, a renowned neuroscientist examines the science of what makes you, you. David J. Linden has devoted his career to understanding the biology common to all humans. But a few years ago he found himself on OkCupid. Looking through that vast catalog of human diversity, he got to wondering: What makes us all so different? Unique is the riveting answer. Exploring everything from the roots of sexuality, gender, and intelligence to whether we like bitter beer, Linden shows how our individuality results not from a competition of nature versus nurture, but rather from a mélange of genes continually responding to our experiences in the world, beginning in the womb. And he shows why individuality matters, as it is our differences that enable us to live together in groups. Told with Linden's unusual combination of authority and openness, seriousness of purpose and wit, Unique is the story of how the factors that make us all human can change and interact to make each of us a singular person.

Unique

Roger Scruton explores the place of God in a disenchanted world. His argument is a response to the atheist culture that is now growing around us, and also a defence of human uniqueness. He rebuts the claim that there is no meaning or purpose in the natural world, and argues that the sacred and the transcendental are 'real presences', through which human beings come to know themselves and to find both their freedom and their redemption. In the human face we find a paradigm of meaning. And

from this experience, Scruton argues, we both construct the face of the world, and address the face of God. We find in the face both the proof of our freedom and the mark of self-consciousness. One of the motivations of the atheist culture is to escape from the eye of judgement. You escape from the eye of judgement by blotting out the face: and this, Scruton argues, is the most disturbing aspect of the times in which we live. In his wide-ranging argument Scruton explains the growing sense of destruction that we feel, as the habits of pleasure seeking and consumerism deface the world. His book defends a consecrated world against the habit of desecration, and offers a vision of the religious way of life in a time of trial.

The Face of God

What Makes a Great City

One of Planetizen's Top Planning Books for 2017 - San Francisco Chronicle's 2016 Holiday Books Gift Guide Pick What makes a great city? City planner and architect Alexander Garvin set out to answer this question by observing cities, largely in North America and Europe, with special attention to Paris, London, New York, and Vienna. For Garvin, greatness is about what people who shape cities can do to make a city great. A great city is a dynamic, constantly changing place that residents and their leaders can reshape to satisfy their demands. Most importantly, it is about the interplay between people and public realm, and how they have interacted throughout history to create great cities. What Makes a Great City will help readers understand that any city can be changed for the better and inspire entrepreneurs, public officials, and city residents to do it themselves.

The Image of the City

The classic work on the evaluation of city form. What does the city's form actually mean to the people who live there? What can the city planner do to make the city's image more vivid and memorable to the city dweller? To answer these questions, Mr. Lynch, supported by studies of Los Angeles, Boston, and Jersey City, formulates a new criterion—imageability—and shows its potential value as a guide for the building and rebuilding of cities. The wide scope of this study leads to an original and vital method for the evaluation of city form. The architect, the planner, and certainly the city dweller will all want to read this book.

Start-Up City

"The public-private partnerships of the future will need to embody a triple-bottom-line approach that focuses on the new P3: people-planet-profit. This book is for anyone who wants to improve the way that we live in cities, without waiting for the glacial pace of change in government or corporate settings. If you are willing to go against the tide and follow some basic lessons in goal setting, experimentation, change management, financial innovation, and communication, real change in cities is possible."--Publisher's description.

Making People-Friendly Towns

Making People-Friendly Towns explores the way our towns and cities, particularly their central areas, look and feel to all their users and discusses their design, maintenance and management. Francis Tibbalds provides a new philosophical approach to the problem, suggesting that places as a whole matter much more than the individual components that make up the urban environment such as buildings, roads and parks. This informative book suggests the way forward for professionals, decision-makers and all those who care about the future of our urban environment and points the reader in the direction of a wealth of living examples of successful town planning.

Shaking Up the City

"Shaking Up the City critically examines many of the concepts and categories within mainstream urban studies that serve dubious policy agendas. Through a combination of abstract theory and concrete empirical evidence, Tom Slater strives to 'shake up' mainstream urban studies in a concise and pointed fashion, turning on its head much of the prevailing wisdom in the field. In doing so, he explores the themes of 'data-driven innovation', urban 'resilience', gentrification, displacement and rent control, 'neighborhood effects', territorial stigmatization, and ethnoracial segregation. Slater analyzes how the mechanisms behind urban inequalities, material deprivation, marginality, and social suffering in cities across the world are perpetuated and made invisible. With important contributions to ongoing debates in sociology, geography, planning, and public policy, and engaging closely with struggles for land rights

and housing justice, Shaking Up The City offers numerous insights for scholarship and political action to guard against the spread of vested interest urbanism"--

Experiencing Cities

This extraordinary text for undergraduate urban students is a reflection of Mark Hutter's academic interests in urban sociology and his life-long passion for experiencing city life. His deep academic roots in the Chicago School of Sociology help inform and appreciate the variety of urban structures and processes and their effect on the everyday lives of people living in cities. This text, however, extends the Chicago School perspective by combining its traditions with a social psychological perspective derived from symbolic interaction and also with a macro-level examination of social organization, social change, stratification and power in the urban context, informed by political economy. This entirely new, 3rd Edition has a global outlook on city life, and a visual presentation unmatched among books in this genre.

Strong Towns

A new way forward for sustainable quality of life in cities of all sizes *Strong Towns: A Bottom-Up Revolution to Build American Prosperity* is a book of forward-thinking ideas that breaks with modern wisdom to present a new vision of urban development in the United States. Presenting the foundational ideas of the Strong Towns movement he co-founded, Charles Marohn explains why cities of all sizes continue to struggle to meet their basic needs, and reveals the new paradigm that can solve this longstanding problem. Inside, you'll learn why inducing growth and development has been the conventional response to urban financial struggles—and why it just doesn't work. New development and high-risk investing don't generate enough wealth to support itself, and cities continue to struggle. Read this book to find out how cities large and small can focus on bottom-up investments to minimize risk and maximize their ability to strengthen the community financially and improve citizens' quality of life. Develop in-depth knowledge of the underlying logic behind the "traditional" search for never-ending urban growth Learn practical solutions for ameliorating financial struggles through low-risk investment and a grassroots focus Gain insights and tools that can stop the vicious cycle of budget shortfalls and unexpected downturns Become a part of the Strong Towns revolution by shifting the focus away from top-down growth toward rebuilding American prosperity *Strong Towns* acknowledges that there is a problem with the American approach to growth and shows community leaders a new way forward. The Strong Towns response is a revolution in how we assemble the places we live.

Open Cities | Open Data

Today the world's largest economies and corporations trade in data and its products to generate value in new disruptive markets. Within these markets vast streams of data are often inaccessible or untapped and controlled by powerful monopolies. Counter to this exclusive use of data is a promising world-wide "open-data" movement, promoting freely accessible information to share, reuse and redistribute. The provision and application of open data has enormous potential to transform exclusive, technocratic "smart cities" into inclusive and responsive "open-cities". This book argues that those who contribute urban data should benefit from its production. Like the city itself, the information landscape is a public asset produced through collective effort, attention, and resources. People produce data through their engagement with the city, creating digital footprints through social media, mobility applications, and city sensors. By opening up data there is potential to generate greater value by supporting unforeseen collaborations, spontaneous urban innovations and solutions, and improved decision-making insights. Yet achieving more open cities is made challenging by conflicting desires for urban anonymity, sociability, privacy and transparency. This book engages with these issues through a variety of critical perspectives, and presents strategies, tools and case studies that enable this transformation.

Contemporary Approaches in Urbanism and Heritage Studies

This book is an intellectual discourse and a concise compendium of current research in Architecture and Urbanism. Primarily, it is a book of readings of 24 chapters. The book brings together theories, manifestos and methodologies on contemporary architecture and urbanism to raise the understanding for the future of architecture and urban planning. Overall, the book aimed to establish a bridge between theory and practice in the built environment. Thus, it reports on the latest research findings and innovative approaches, methodologies for creating, assessing, and understanding of contemporary built environment.

Hot Property

This open access book discusses booming housing markets in cities around the globe, and the resulting challenges for policymakers and central banks. Cities are booming everywhere, leading to a growing demand for urban housing. In many cities this demand is out-pacing supply, which causes house prices to soar and increases the pressure on rental markets. These developments are posing major challenges for policymakers, central banks and other authorities responsible for ensuring financial stability, and economic well-being in general. This volume collects views from high-level policymakers and researchers, providing essential insights into these challenges, their impact on society, the economy and financial stability, and possible policy responses. The respective chapters address issues such as the popularity of cities, the question of a credit-fueled housing bubble, the role of housing supply frictions and potential policy solutions. Given its scope, the book offers a revealing read and valuable guide for everyone involved in practical policymaking for housing markets, mortgage credit and financial stability.

Linguistic Landscape in the City

Elana Shohamy is a professor and chair of the language education program at the School of Education, Tel Aviv University, where she teaches, researches and writes about multiple issues relating to multilingualism: language policy, language testing and language in the public space. --

Prayer in the City

This volume envisions social practices surrounding mosques, shrines and public spaces in urban contexts as a window on the diverse ways in which Muslims in different regional and historical settings imagine, experience, and inhabit places and spaces as »sacred«. Unlike most studies on Muslim communities, this volume focuses on cultural, material and sensuous practices and urban everyday experience. Drawing on a range of analytical perspectives, the contributions examine spatial practices in Muslim societies from an interdisciplinary perspective, an approach which has been widely neglected both in Islamic studies and social sciences.

Gods of the City

"Fascinating insights into modern urban religious practice make Orsi's collection a must-read." -- Publishers Weekly "The essays provide insight into the cultural creativity, reinterpretation of worship and religious ingenuity of city people over the last 50 years." -- Library Journal "At last, a major dissection of the great mystery in modern American life -- how religion and spirituality prospered amidst industrialization, urbanization, and rampant technological change after 1880!" -- Jon Butler, Yale University "Urban religion" strikes many as an oxymoron. How can religion thrive in the alienated, secular, fast-paced, and materialistic world of the modern, Western city? The authors in this collection believe that cities not only can provide the settings for religious expression, but also are material to the experiences which give rise to those religious expressions. In this book, they explore the distinctly urban forms of religious experience and practice that have developed in relation to the spaces, social conditions, and history of American cities.

How To Think About Cities

Cities are raucous, cacophonous, and complex. Many dimensions of life play out and conflict across cities' intricate landscapes, be they political, cultural, economic, or social. Urban policy makers and analysts often attempt to "cut through the noise" of urban disagreement by emphasizing a dominant lens for understanding the key, central logic of the city. How To Think About Cities sees this tendency to

selective vision as misleading and ultimately unjust: cities are many things at once to different people and communities. This book describes the various ways of seeing the functions and landscapes of the city as place frames, and the constant process of negotiating which place frames best explain the city as place-making. Martin and Pierce call for an explicitly hybrid perspective that shifts between many different frames for making sense of cities. This approach highlights how any given stance opens up some lines of inquiry and understanding while closing off others. Thinking of cities as sites of contested perspectives promotes a synthetic approach to urban analysis that emphasizes difference and political possibility. This mosaic view of the city will be a welcome read for those within urban studies, geography, and social sciences exploring the many faces of urban life.

Capital City

"This superbly succinct and incisive book couldn't be more timely or urgent." —Michael Sorkin, author of *All Over the Map* Our cities are changing. Around the world, more and more money is being invested in buildings and land. Real estate is now a \$217 trillion dollar industry, worth thirty-six times the value of all the gold ever mined. It forms sixty percent of global assets, and one of the most powerful people in the world—the president of the United States—made his name as a landlord and developer. Samuel Stein shows that this explosive transformation of urban life and politics has been driven not only by the tastes of wealthy newcomers, but by the state-driven process of urban planning. Planning agencies provide a unique window into the ways the state uses and is used by capital, and the means by which urban renovations are translated into rising real estate values and rising rents. *Capital City* explains the role of planners in the real estate state, as well as the remarkable power of planning to reclaim urban life.

Retrofitting Cities

Developing an up-to-date critical framework for analysing urban retrofit, this is the first book to examine urban re-engineering for sustainability in a socio-technical context. *Retrofitting Cities* examines why retrofit is emerging as an important strategic issue for urban authorities and untangles the mix of economic, competitive, ecological and social drivers that influence any transition towards a more sustainable urban environment. *Retrofitting Cities* comparatively explores how urban scale retrofitting can be conceptualised as a socio-technical transition; to critically compare and contrast different national styles of response in cities of the north and global south; and, to develop new research and policy agendas on future development of progressive retrofitting. Bringing together a group of researchers from a variety of disciplinary backgrounds that reflect the complexity of the research challenge, *Retrofitting cities* looks across different infrastructures and types of built environment, dealing with diverse urban contexts and examining formal as well as community responses. This is a uniquely practical book for urban planning and policy professionals as well as for researchers in urban studies and urban design.

Divided City

Nominated for ten UK book awards, Theresa Breslin's hit novel tells of how two young boys - one Rangers fan, one Celtic fan - are drawn into a secret pact to help a young asylum seeker in a city divided by prejudice. Now adapted for the stage by Martin Travers, the play has already been produced to great acclaim at Glasgow's Citizens Theatre. Graham and Joe just want to play football and be selected for the new city team, but a violent attack on Kyoul, an asylum seeker, changes everything when they find themselves drawn into a secret pact to help the victim and his girlfriend Leanne. Set in Glasgow at the time of the Orange Order walks, *Divided City* is a gripping tale about two boys and how they must find their own way forward in a world divided by difference. This educational edition has been prepared by national Drama in Secondary English experts Ruth Moore and Paul Bunyan. Published in Methuen Drama's Critical Scripts series the book: - meets the curriculum requirements for English at KS3, GCSE and Scottish CfE. - features detailed, structured schemes of work utilising drama approaches to improve literary and language analysis - places pupils' understanding of the learning process at the heart of the activities - will help pupils to boost English GCSE success and develop high-level skills at KS3 - will save teachers considerable time devising their own resources.

Seeing Like a City

Seeing like a city means recognizing that cities are living things made up of a tangle of networks, built up from the agency of countless actors. Cities must not be considered as expressions of larger

paradigms or sites of human effort and organization alone. Within their density, size and sprawl can be found a world of symbols, bodies, buildings, technologies and infrastructures. It is the machine-like combination, interaction and confrontation of these different elements that make a city. Such a view locates urban outcomes and influences in the character of these networks, which together power urban life, allocating resources, shaping social opportunities, maintaining order and simply enabling life. More than the silent stage on which other powers perform, such networks represent the essence of the city. They also form an important political project, a politics of small interventions with large effects. The increasing evidence for an Anthropocene bears out the way in which humanity has stamped its footprint on the planet by constructing urban forms that act as systems for directing life in ways that create both immense power and immense constraint.

The City Assembled

Kostof follows *The City Shaped* with a brilliant study of the component parts that make up urban life. All cities consist of certain basic elements--streets, parks, public places, and boundaries--and it is to these day-to-day pieces of urban experience that this book turns, providing a fascinating understanding of walls, fortifications, placement of green space, and the fringe areas where city and country meet. Illustrations.

Edge City

First there was downtown. Then there were suburbs. Then there were malls. Then Americans launched the most sweeping change in 100 years in how they live, work, and play. *The Edge City*.

Building and Dwelling

A reflection on the past and present of city life, and a bold proposal for its future "Constantly stimulating ideas from a veteran of urban thinking."—Jonathan Meades, *The Guardian* In this sweeping work, the preeminent sociologist Richard Sennett traces the anguished relation between how cities are built and how people live in them, from ancient Athens to twenty-first-century Shanghai. He shows how Paris, Barcelona, and New York City assumed their modern forms; rethinks the reputations of Jane Jacobs, Lewis Mumford, and others; and takes us on a tour of emblematic contemporary locations, from the backstreets of Medellín, Colombia, to Google headquarters in Manhattan. Through it all, Sennett laments that the "closed city"—segregated, regimented, and controlled—has spread from the Global North to the exploding urban centers of the Global South. He argues instead for a flexible and dynamic "open city," one that provides a better quality of life, that can adapt to climate change and challenge economic stagnation and racial separation. With arguments that speak directly to our moment—a time when more humans live in urban spaces than ever before—Sennett forms a bold and original vision for the future of cities.

Understanding the City

Henri Lefebvre is undoubtedly one of the most influential thinkers in the field of urban space and its organization; his theories offer reflections still valid for analyzing social relations in urban areas affected by the crisis of the neoliberal economic system. Lefebvre's ideal of the "right to the city" is now more widely accepted given today's current cultural and social situation. Most current research on Henri Lefebvre refers solely to his ideas and their theoretical discussion, without focusing on the empirical transcription of the philosopher. This book fills this gap, and proposes examples about the empirical use of Henri Lefebvre's sociology from the perspective of different cities and researchers in order to understand the city and its evolutions in the context of neoliberal globalization. The book's main purpose is to revisit Lefebvre's still-relevant key concepts to propose new comprehensions of the contemporary city. Case studies in this book will show also that the reception of Lefebvrian concepts differs across different contexts, depending on the social and political circumstances of each country. The debates in this book both expand the scope of urban imagination, and help to reinvigorate, unify, and empower shared desires for just urban outcomes. The contributions to this book also illuminate the everyday choices concerning the form and social processes of the city, and the inspiration that they draw from Lefebvre's theoretical legacy in the realm of urban sociology.

John Emerson Roberts: Kansas City's "Up-To-Date" Freethought Preacher

John Emerson Roberts (1853 - 1942) was a Kansas City, Missouri, success story. Arriving in 1881 as a Baptist minister, his developing ideas led him to abandon the idea of hell and become a Unitarian. Soon that became too limited for him and he decided to preach on his own as a freethinker. The local press eagerly followed his progress. While his intellectual journey was common in his generation, he was unique in creating a Church of freethought. His sermons and lectures show a mixture of original thinking and conventional ideas typical of his time. As an admirer of Robert Ingersoll, the nineteenth century agnostic, and a friend of Clarence Darrow, the twentieth century atheist, Robert's career spans an era of significant change in both cultural and intellectual history. This pioneering study restores to memory the life and work of a once noted and popular religious leader, who went from Baptist pastor to Unitarian minister, and finally to an independent role in the Freethought movement. Informed by profound scholarship and a warmly humanist style, this book is a major contribution to the intellectual history of the Midwest. Fred Whitehead, author of *Freethought on the American Frontier*. This biography of the author's great-grandfather evokes vividly the now largely forgotten world of the heyday of liberal religion, free thought, and the urban lecture hall in an age when religion was fiercely competitive in the burgeoning cities of the Midwest. Peter Williams, Distinguished Professor of Comparative Religion and American Studies, Miami University.

Smart Cities

The intelligence of a city is the capacity to learn: to learn the past, its history and the culture of its territory. Unlike the smart city, we do not build a city from scratch and there is nothing, there is no smart city standard. City intelligence is measured by its ability to fit into a territorial dynamic, a story and a culture. Continuous learning through instantaneous feedback provides the digital tools to understand and map the urban system and driver.

Smart Cities

This edited volume discusses the socioeconomic, environmental, and policy implications of smart cities. Written by international experts in energy economics and policy, the chapters present a wide range of high quality theoretical and empirical studies at the nexus of social, entrepreneurial, governmental and ecological transformation. The book covers a wide range of topics, with a view towards providing empirical evidence of the benefits of smart cities as well as practical frameworks for smart city initiatives. Topics discussed include: smart city transition pillars, innovation for smart and sustainable cities design and implementation, smart city governance, smart mobility within cities, and smart cities in emerging economies. This volume will be of use to students and researchers interested in resource economics, energy economics, sustainability, ICT, and governance, as well as policymakers working on smart city initiatives. This is an open access book.

Everyday Life in the Segmented City

The conference "Everyday Life in the Segmented City"

Close-Up

"Grady Clay looks hard at the landscape, finding out who built what and why, noticing who participates in a city's success and who gets left in a 'sink,' or depressed (often literally) area. Clay doesn't stay in the city; he looks at industrial towns, truck stops, suburbs—nearly anywhere people live or work. His style is witty and readable, and the book is crammed with illustrations that clarify his points. If I had to pick up one book to guide my observations of the American scene, this would be it."—Sonia Simone, *Whole Earth Review* "The emphasis on the informal aspects of city-shaping—topographical, historical, economic and social—does much to counteract the formalist approach to American urban design. *Close-Up*...should be required reading for anyone wishing to understand Americans and their cities."—Roger Cunliffe, *Architectural Review* "*Close-Up* is a provocative and stimulating book."—Thomas J. Schlereth, *Winterthur Portfolio* "Within this coherent string of essays, the urban dweller or observer, as well as the student, will find refreshing strategies for viewing the environmental 'situations' interacting to form a landscape."—*Dallas Morning News* "*Clay's Close-Up*, first published in 1973, is still a key book for looking at the real American city. Too many urban books and guidebooks concentrate on the good parts of the city....Clay looks at all parts of the city, the suburbs, and the places between cities, and develops new terms to describe parts of the built environment—fronts, strips, beats, stacks, sinks, and turf. No one who wants to understand American cities or to describe them, should fail

to know this book. The illustrations are of special interest to the guidebook writer."—American Urban Guidenotes

Richmond/Hampton Roads Passenger Rail Project

Cities in the 21st Century provides an overview of contemporary urban development. Written by more than thirty major academic specialists from different countries, it provides information on and analysis of the global network of cities, changes in urban form, environmental problems, the role of technologies and knowledge, socioeconomic developments, and finally, the challenge of urban governance. In the mid-20th century, architect and planner Josep Lluís Sert wondered if cities could survive; in the early 21st century, we see that cities have not only survived but have grown as never before. Cities today are engines of production and trade, forges of scientific and technological innovation, and crucibles of social change. Urbanization is a major driver of change in contemporary societies; it is a process that involves acute social inequalities and serious environmental problems, but also offers opportunities to move towards a future of greater prosperity, environmental sustainability, and social justice. With case studies on thirty cities in five continents and a selection of infographics illustrating these dynamic cities, this edited volume is an essential resource for planners and students of urbanization and urban change.

Cities in the 21st Century

Cities have always been dynamic social environments for visual and otherwise symbolic competition between the groups who live and work within them. In contemporary urban areas, all sorts of diversity are simultaneously increased and concentrated, chief amongst them in recent years being the ethnic and racial transformation produced by migration and the gentrification of once socially marginal areas of the city. Seeing Cities Change demonstrates the utility of a visual approach and the study of ordinary streetscapes to document and analyze how the built environment reflects the changing cultural and class identities of neighborhood residents. Discussing the manner in which these changes relate to issues of local and national identities and multiculturalism, it presents studies of various cities on both sides of the Atlantic to show how global forces and the competition between urban residents in 'contested terrains' is changing the faces of cities around the globe. Blending together a variety of sources from scholarly and mass media, this engaging volume focuses on the importance of 'seeing' and, in its consideration of questions of migration, ethnicity, diversity, community, identity, class and culture, will appeal to sociologists, anthropologists and geographers with interests in visual methods and urban spaces.

Miami, Florida; Jacksonville, Florida; Atlanta, Georgia; Birmingham, Alabama; Little Rock, Arkansas; Dallas, Texas; San Antonio, Texas; Houston, Texas; Baton Rouge, Louisiana; New Orleans, Louisiana; Memphis, Tennessee

Cities will have to apply creative solutions to their myriad problems the coming years. They need to develop creative and innovative industries and services, such as design and culture. Examples of 'creative' cities.

Seeing Cities Change

This book provides an invaluable overview of neoliberalising trends in urban policies and governance by presenting novel perspectives on municipal entrepreneurship support policies. It seeks to address a current lack of in-depth empirical knowledge of this topic and the reference literature's silence on local actors agency. The book's scholarly debate around the impact of neoliberal capitalism on cities interweaves with empirical observations in the European cities of Barcelona and Milan with a view to examining what lies behind the "start-up city" label, and the way local actors reproduce, contest and re-signify entrepreneurship policies and practices in a highly individualised context. Based on more than sixty interviews with key policy actors, including young beneficiaries, it sheds light on their representations, motivations, intentions and room for manoeuvre in a way that encompasses local specificities in which multi-scalar economic, social, institutional and cultural processes interact. Finally, this book offers new insights into critical entrepreneurship studies and current debates about convergence and divergence trends in urban policies and governance.

The Creative City

This book explores the connections between the processes of social structuring and sensibilities in contemporary cities. The transformations of capitalism on a global scale imply reconfigurations both in the way of planning and organizing cities, and in the ways of dwelling and feeling them. The generalization of the urban, the suburbanization of the metropolis, and classified and racializing segregation, just to mention some significant phenomena, not only introduce changes linked to the forms of consumption of the city and the land, the appropriation and privatization of collective places, the strategic revaluation of urban times / spaces, or the establishment of new centralities. They also involve changes in sensibilities, which translate into substantial transformations in the lives of people and groups that dwell in cities in the Global North and South. Based on various empirical records and methodological procedures, the chapters included in this book establish a fertile dialogue between collaborators from different geocultural contexts that locate urban experiences and sensibilities as a point of articulation to address the processes of social structuring on a global scale.

Unpacking the 'Start-up City'

Aldo Rossi was a practicing architect and leader of the Italian architectural movement La Tendenza and one of the most influential theorists of the twentieth century. The *Architecture of the City* is his major work of architectural and urban theory. In part a protest against functionalism and the Modern Movement, in part an attempt to restore the craft of architecture to its position as the only valid object of architectural study, and in part an analysis of the rules and forms of the city's construction, the book has become immensely popular among architects and design students.

Cities, Capitalism and the Politics of Sensibilities

Essentials of Urban Design explains the fundamental concepts of urban design, providing the understanding and tools needed to achieve better design outcomes. It is equally useful for designing places and evaluating designs. Each chapter outlines the key steps in designing or assessing a different type of development. All common types of urban development are addressed, from infill buildings to whole urban growth areas, residential to employment uses, and centres to public transport interchanges. For each development type, widely accepted urban design principles are explained, and 'rules of thumb' provided. This practical handbook is liberally illustrated with diagrams, photos of 'good' and 'bad' examples of urban design and handy checklists for common urban design tasks. It will be a valuable reference tool for architects, developers, urban planners, traffic engineers, landscape architects, councillors, planning lawyers, planning tribunal members and residents concerned about development.

The Architecture of the City

First Published in 2005. Routledge is an imprint of Taylor & Francis, an informa company.

Essentials of Urban Design

This comprehensive reference text is a collection of important research findings on the latest developments in network modeling for optimization of smart cities. Such models can be used from outlining the fundamental concepts of urban development to the description and optimization of physical networks, such as power, water or telecommunications. Networks help us understand city economics and various aspects of human interactions within cities with particular applications in quality of life and the flow of people and goods. Finally, the natural environment and even the climate of cities can be modeled and managed as networks.

City of Flows

Understanding the modern city and the powerful forces within it is the life's work of Harvard urban economist Edward Glaeser, who at forty is hailed as one of the world's most exciting urban thinkers. Travelling from city to city, speaking to planners and politicians across the world, he uncovers questions large and small whose answers are both counterintuitive and deeply significant. Should New Orleans be rebuilt? Why can't my nephew afford an apartment in New York? Is London the new financial capital of the world? Is my job headed to Bangalore? In *Triumph of the City*, Glaeser takes us around the world and into the mind of the modern city – from Mumbai to Paris to Rio to Detroit to Shanghai, and to any number of points in between – to reveal how cities think, why they behave in the manners that they do, and what wisdom they share with the people who inhabit them. 'A masterpiece' Steven

D. Levitt, co-author of Freakonomics 'A brilliant read: persuasive and provocative' Time Out 'Replete with lightly borne learning, this is a tremendous book' Bryan Appleyard, Literary Review 'Fascinating' Sunday Telegraph 'Comprehensive, compelling and strongly recommended' Tim Harford, author of The Undercover Economist and Adapt 'A hymn to the city' Metro
