Financing American Higher Education in the Era of Globalization

This ambitious book grows out of the realization that a convergence of economic, demographic, and political forces in the early twenty-first century requires a fundamental reexamination of the financing of American higher education. The authors identify and address basic issues and trends that cut across the sectors of higher education, focusing on such questions as how much higher education the country needs for individual opportunity and for economic viability in the future; how responsibility for paying for it is currently allocated; and how financing higher education should be addressed in the future.

American Higher Education in the Twenty-First Century

American Higher Education in the Twenty-first century offers a comprehensive introduction to the central issues facing American colleges and universities. The contributors address major changes in higher education—including the rise of organized social movements, the problem of income inequality and stratification, the growth of for-profit and distance education, online education, community colleges, and teaching and learning-- will placing American higher education and its complex social and political context. --Cover.

Wealth, Cost, and Price in American Higher Education

Colleges and universities are richer than ever—so why has the price of attending them risen so much? As endowments and fundraising campaigns have skyrocketed in recent decades, critics have attacked higher education for steeply increasing its production cost and price and the snowballing debt of

students. In *Wealth, Cost, and Price in American Higher Education*, Bruce A. Kimball and Sarah M. Iler reveal how these trends began 150 years ago and why they have intensified in recent decades. In the late nineteenth century, American colleges and universities began fiercely competing to expand their revenue, wealth, and production cost in order to increase their quality and prestige and serve the soaring number of students. From that era through today, the rising wealth and cost of higher education have continued to reinforce each other and spiral upward, increasing the heavily subsidized price paid by students. Kimball and Iler explain the strategy and reasoning that drove this wealth-cost double helix, the new tactics in fundraising and endowment investing that fueled it, and economists' efforts to understand it. Using extensive archival, documentary, and quantitative research, Kimball and Iler trace the shifting public perception of higher education and its correlation with rising costs, stagnating wages, and explosive student debt. They show how stratification of wealth in higher education became tightly interwoven with wealth inequality in American society. This relationship raises fundamental questions about equity in US higher education and its contribution to social mobility and democracy.

American Higher Education

This series provides a scholarly forum for interdisciplinary research on the financing of public, private, and higher education in the United States and abroad. The series is committed to disseminating high quality empirical studies, policy analyses, and literature reviews on contemporary issues in fiscal policy and practice. Each themed volume is intended for a diversity of readers, including academic researchers, students, policy makers, and school practitioners. The first volume in the series, *Fiscal Policy in Urban Education*, addressed the continuing challenge of large, complex urban school systems to operate both equitably and efficiently. Guest edited by Faith Crampton and David Thompson, the second volume in our series, *Saving America's School Infrastructure*, examined the relationship between the physical environment of schools and student achievement. The third volume, *High Stakes Accountability in Education: Implications for Resources and Capacity*, compiled a diversity of research studies focused local, state and national efforts to respond to the reauthorization of the federal Elementary and Secondary Education Act, commonly referred to as No Child Left Behind (NCLB). In this fourth volume, attention is turned to both theoretical and pragmatic concerns in American higher education. During the final stages of the preparation of this manuscript, our schools, colleges, and universities have been confronted with what can be referred to as a “once in a century” set of challenges. As the global COVID 19 pandemic penetrated the United States in early 2020, colleges and universities have scrambled to address this ongoing public health crisis. Emergency task forces were established, campuses were shut down, faculty moved their instruction to virtual formats, and the entire higher education industry braced itself for the financial fallout. In addition to having to invest additional resources in classroom technology, ventilation, and personal protective equipment, colleges and universities continue to respond to revenue shortfalls, including reductions in both tuition and room and board revenue. This financial landscape requires judicious policy-making and research informed practice. With this in mind, contributing authors were asked to pay specific attention to contemporary challenges and opportunities during a pivotal period in America's colleges and universities. The contributing authors were asked to think of policymakers and practitioners at local, state, and national levels as the intended audiences for their work. Our contributors responded with a collection of studies examining the impact of federal and state policymaking on higher education finance and on specified educational outcomes and practices. Throughout the volume, particular attention is paid to issues of equity and adequacy in American higher education, including the deployment of incentives and structures that support the access and achievement of traditionally underrepresented students.

Financing Higher Education in a Global Economy

The results of a national symposium which brought together academic financial decision-makers and representatives of the broader financial community. The book discusses several aspects of financing higher education in a world economy.

Thinking about Higher Education

With higher education around the world in a period of extreme flux, this volume explores its underlying philosophy, a core element of the ongoing debate. Offering a diverse range of perspectives from an international selection of renowned scholars of higher education, the book is full of imaginative insights that add up to a substantive contribution to the discussion. As universities attempt to adapt to a new environment characterized by stiff international competition, networked remote learning,

burgeoning student numbers and comparative performance assessment, how we conceptualize the purpose and ethos of our higher learning institutions is more important than ever. This publication features a multitude of distinctive approaches that illuminate potential solutions to the complex issues universities must grapple with in these uncertain times. Rather than espousing a singular philosophical approach, the editors have assembled views from across the spectrum and from differing national contexts, representing a multidisciplinary response to the situation. This collection of papers aims thus to inspire fresh developments in the way we think about the complexities of and options available to, higher education.

Suffering and the Intelligence of Love in the Teaching Life

This book shares insights drawn from the diverse voices of public school teachers, community outreach education workers, professors, writers, poets, artists, and musicians on suffering in school and the classroom. Teachers speak about their own encounters with and perceptions from suffering using critical-analytic textual works, as well as first-hand personally reflective accounts. By sharing their stories and reflections, the editors and contributors shed light upon the dark areas that often are not addressed in Teacher Training Programs, and that generally remain unaddressed and unacknowledged even as teachers become well-established as professionals in the field of education.

Bridging the Gap Between the Abundance of American Higher Education Talent and the Immense Foreign Demand for It

The gap between the abundance of American higher education talent and the immense foreign demand for it is the great chasm in global education. It is a gulf of lost opportunities. It is also a space of great economic potential. This book describes the great chasm, examines factors underlying it, and suggests ways to bridge the gap to realize this potential. The abundance of talent stems from the slackening growth of the U.S. higher education sector in the New Millennium. Contributing to the slowdown are flat enrollments, adverse demographic trends, U.S. visa restrictions, and intensifying competition. The immense foreign demand has been fueled by the secular expansion of the global economy. It has been shaped by the pressing need in emerging markets to develop an educated workforce. The great chasm creates an opportunity for American academic institutions to extend their global reach. Bridging the gap, however, is not an easy feat for most U.S. colleges and universities. It is complicated by an institutional culture that is averse to commercialization, an organizational structure that is operationally slow, and a governance system that often leads to indecision, conflict, and paralysis. Bridging the gap requires fundamental changes in the culture, organization, and governance of traditional U.S. academic institutions. These changes will pave the way for international expansion, which could enhance the financial well-being of these institutions, the social-well-being of less developed nations, and the critical role that America plays globally in knowledge creation, the dissemination of ideas, and the pursuit of the truth.

Potential on the Periphery

This book profiles the Simmons Memorial Foundation (SMF), a grassroots non-profit organization co-founded by Omari Scott Simmons, that promotes college access for vulnerable students. Simmons discusses how the organization has helped students secure admission and succeed in college, using this example to contextualize the broader realm of existing education practice, academic theory, and public policy.

The Attainment Agenda

How state leadership determines effective higher education attainment. Although the federal government invests substantial resources into student financial aid, states have the primary responsibility for policies that raise overall higher educational attainment and improve equity across groups. The importance of understanding how states may accomplish these goals has never been greater, as educational attainment is increasingly required for economic and social well-being of individuals and society. Drawing on data collected from case studies of the relationship between public policy and higher education performance in five states—Georgia, Illinois, Maryland, Texas, and Washington—The Attainment Agenda offers a framework for understanding how state public policy can effectively promote educational attainment. Laura W. Perna and Joni E. Finney argue that there is no silver bullet to improve higher education attainment. Instead, achieving the required levels of attainment demands a comprehensive approach. State leaders must consider how performance in one area (such as degree

completion) is connected to performance in other areas (such as preparation or affordability), how particular policies interact to produce expected and unexpected outcomes, and how policy approaches must be adapted to reflect their particular context. The authors call for greater attention to the state role in providing policy leadership to advance a cohesive public agenda for higher education and adopting public policies that not only increase the demand for and supply of higher education but also level the playing field for higher educational opportunity. The insights offered in *The Attainment Agenda* have important implications for public policymakers, college and university leaders, and educational researchers interested in ensuring sustained higher education attainment.

Partnership Motives and Ethics in Corporate Investment in Higher Education

The roles that corporate social responsibility (CSR) and business support of democracy play in American higher education are infrequently discussed, though very important. There are many ethical issues that concern both corporate interests as well as higher education, linking the two more than many would think. It is necessary to understand the environment, inter-organizational relationships, and documents holistically to observe the rich history, pluralistic American societal issues, and relevant milestones between corporate America and higher education. *Partnership Motives and Ethics in Corporate Investment in Higher Education* provides comprehensive documentation of business and corporate entanglements with higher education. This work discusses the historic journey of funding from business and U.S. corporate engagement in American higher education. Covering topics such as academy-business relationships, philanthropic partnerships, and transactional partnerships, this work is essential for professors, executives, managers, faculty, fundraisers, leaders in higher education, researchers, students, and academicians with interests in CSR, business ethics, and higher education.

Learning and Performance Assessment: Concepts, Methodologies, Tools, and Applications

As teaching strategies continue to change and evolve, and technology use in classrooms continues to increase, it is imperative that their impact on student learning is monitored and assessed. New practices are being developed to enhance students' participation, especially in their own assessment, be it through peer-review, reflective assessment, the introduction of new technologies, or other novel solutions. Educators must remain up-to-date on the latest methods of evaluation and performance measurement techniques to ensure that their students excel. *Learning and Performance Assessment: Concepts, Methodologies, Tools, and Applications* is a vital reference source that examines emerging perspectives on the theoretical and practical aspects of learning and performance-based assessment techniques and applications within educational settings. Highlighting a range of topics such as learning outcomes, assessment design, and peer assessment, this multi-volume book is ideally designed for educators, administrative officials, principals, deans, instructional designers, school boards, academicians, researchers, and education students seeking coverage on an educator's role in evaluation design and analyses of evaluation methods and outcomes.

Higher Education in America

A sweeping assessment of the state of higher education today from former Harvard president Derek Bok *Higher Education in America* is a landmark work--a comprehensive and authoritative analysis of the current condition of our colleges and universities from former Harvard president Derek Bok, one of the nation's most respected education experts. Sweepingly ambitious in scope, this is a deeply informed and balanced assessment of the many strengths as well as the weaknesses of American higher education today. At a time when colleges and universities have never been more important to the lives and opportunities of students or to the progress and prosperity of the nation, Bok provides a thorough examination of the entire system, public and private, from community colleges and small liberal arts colleges to great universities with their research programs and their medical, law, and business schools. Drawing on the most reliable studies and data, he determines which criticisms of higher education are unfounded or exaggerated, which are issues of genuine concern, and what can be done to improve matters. Some of the subjects considered are long-standing, such as debates over the undergraduate curriculum and concerns over rising college costs. Others are more recent, such as the rise of for-profit institutions and massive open online courses (MOOCs). Additional topics include the quality of undergraduate education, the stagnating levels of college graduation, the problems of university governance, the strengths and weaknesses of graduate and professional education, the environment for research, and the benefits and drawbacks of the pervasive competition among American colleges and universities. Offering a rare survey and evaluation of American higher education

as a whole, this book provides a solid basis for a fresh public discussion about what the system is doing right, what it needs to do better, and how the next quarter century could be made a period of progress rather than decline.

Volatility in State Spending for Higher Education

The severity of cuts and the unpredictability in state funding for higher education have garnered headlines across the nation since the turn of the present century. In this context, the authors in this new groundbreaking volume argue that too little attention is paid to the consequences of volatility in funding, as most discussions focus on levels of funding. Their research addresses an important blind spot in the academic literature since predictability matters—to institutions, students, families, and states. In addition, the risks of operating in an uncertain financial environment have led to behaviors that are not always in the best interests of states, institutions, faculty, students, or the public good.

New Languages and Landscapes of Higher Education

The landscapes of higher education have been changing rapidly, with enormous growths in participation rates in many countries across the world, and major developments and changes within institutions. But the languages that we need to conceptualise and understand these changes have not been keeping pace. The central argument in this book is that new ways of thinking about higher education, the new languages of its title, are needed to understand the role of universities and colleges in contemporary society and culture and the global economy, new landscapes. Over-reliance on existing conceptualisations of higher education, has made it difficult to understand fully the nature of 21st-century higher education. It may also have encouraged a view that there is no alternative to the development of more marketized forms of higher education. The analysis offered suggests that the future is much more open. It argues that familiar categories, normally accepted as givens, are actually more fluid. 'Systems' of higher education, whether expressed through direct public funding or through regulatory regimes, are being eroded. 'Institutions', often assumed to be to be given enhanced agency by more corporate forms of management and governance), are no longer powerful actors, if they ever were. 'Research', often corralled by assessment and management systems, is becoming more diffuse and distributed. 'Learning', supposedly more focused on skill outcomes and employability, retains a more broadly educative function. The 'publicness' of higher education has not disappeared as public funding has diminished, but taken on new forms. With contributions from leading figures, drawn from a wide range of countries, this book provides an authoritative analysis of many of the major issues which dominate discussion with respect to policy, practice and research in the field of higher education, and it can expect to become a major source book for all who are interested in the development of higher education in the 21st Century.

Higher Education and Silicon Valley

It focuses on the ways in which various types of colleges have endeavored—and often failed—to meet the demands of a vibrant economy and concludes with a discussion of current policy recommendations, suggestions for improvements and reforms at the state level, and a proposal to develop a regional body to better align educational and economic development.

Seeing the World

An in-depth look at why American universities continue to favor U.S.-focused social science research despite efforts to make scholarship more cosmopolitan. U.S. research universities have long endeavored to be cosmopolitan places, yet the disciplines of economics, political science, and sociology have remained stubbornly parochial. Despite decades of government and philanthropic investment in international scholarship, the most prestigious academic departments still favor research and expertise on the United States. Why? *Seeing the World* answers this question by examining university research centers that focus on the Middle East and related regional area studies. Drawing on candid interviews with scores of top scholars and university leaders to understand how international inquiry is perceived and valued inside the academy, *Seeing the World* explains how intense competition for tenure-line appointments encourages faculty to pursue “American” projects that are most likely to garner professional advancement. At the same time, constrained by tight budgets at home, university leaders eagerly court patrons and clients worldwide but have a hard time getting departmental faculty to join the program. Together these dynamics shape how scholarship about the rest of the world evolves. At once a work-and-occupations study of scholarly disciplines, an essay on the formal organization of

knowledge, and an inquiry into the fate of area studies, *Seeing the World* is a must-read for anyone who cares about the future of knowledge in a global era.

The Neoliberal Agenda and the Student Debt Crisis in U.S. Higher Education

Capturing the voices of Americans living with student debt in the United States, this collection critiques the neoliberal interest-driven, debt-based system of U.S. higher education and offers alternatives to neoliberal capitalism and the corporatized university. Grounded in an understanding of the historical and political economic context, this book offers auto-ethnographic experiences of living in debt, and analyzes alternatives to the current system. Chapter authors address real questions such as, Do collegians overestimate the economic value of going to college? and How does the monetary system that student loans are part of operate? Pinpointing how developments in the political economy are accountable for students' university experiences, this book provides an authoritative contribution to research in the fields of educational foundations and higher education policy and finance.

The Politics of Performance Funding for Higher Education

"One of the striking ways in which state governments have pursued better performance in public higher education is through the use of performance funding. Performance funding involves tying state support directly to institutional performance on specific outcomes such as rates of graduation and job placement. The principal rationale for performance funding has been that the introduction of market-like forces will prod institutions to become more efficient, delivering "more bang for the buck." Kevin Dougherty, an expert on state performance funding, finds its development puzzling. First, despite the great interest in it, only half the states have ever adopted performance funding for higher education. Moreover, of the states that did adopt performance funding, over half later dropped it. Finally, in the states that have retained performance funding over a long period of time, their programs have undergone considerable changes in the amount of state funding they devote to performance funding and in the content of the indicators they use to allocate that funding. In spite of this, performance funding continues to attract interest as a way of improving educational outcomes. This book, based on an extensive ten-state study, aims to shed light on the social and political factors affecting the origins, evolution, and demise of these programs"--

Reshaping the University

The global economic crisis has required governments across the globe to reconsider their spending priorities. It is within this demanding economic context that higher education systems have been steadily restructured with in many ways the English model in the vanguard of change. This book focuses in particular upon the policy of removing almost entirely public support for the payment of student fees. This has emerged from a steady process of change, which has broad political support and is underwritten by the idea that higher education is now seen more as a private than a public, good. As this shift has occurred (not a new innovation but rather a return to what once prevailed as more of a market in English higher education) so the relationship between government and the higher education has evolved with the latter now attempting to steer the development of the system through a state-regulated market. The book has a strong comparative dimension that draws upon US higher education to illustrate both the possible advantages and potential hazards to the marketization strategy. It concludes that any such strategy needs to be accompanied by state regulation if it is to function effectively, particularly to stimulate price competition, encourage innovation from new entrants, and provide consumer protection for students paying high fees.

The State Higher Education Executive Officer and the Public Good

Contributors include Robert E. Anderson, Alisa Hicklin Fryar, Mary Fulton, James C. Hearn, Thomas D. Layzell, Paul E. Lingenfelter, Erik C. Ness, Richard G. Rhoda, William M. Zumeta. In this volume, scholars and practitioners come together to explore the important role of the SHEEO and its impact on issues of higher education access, opportunity, and impact. Chapters present historical investigations, original research, and reflections and advice for current and aspiring SHEEOs, state policy leaders, and students of higher education.

Academic Capitalism in the Age of Globalization

Understanding higher education and the knowledge economy in the Age of Globalization. Today, nearly every aspect of higher education—including student recruitment, classroom instruction, faculty research, administrative governance, and the control of intellectual property—is embedded in a political economy with links to the market and the state. Academic capitalism offers a powerful framework for understanding this relationship. Essentially, it allows us to understand higher education's shift from creating scholarship and learning as a public good to generating knowledge as a commodity to be monetized in market activities. In *Academic Capitalism in the Age of Globalization*, Brendan Cantwell and Ilkka Kauppinen assemble an international team of leading scholars to explore the profound ways in which globalization and the knowledge economy have transformed higher education around the world. The book offers an in-depth assessment of the theoretical foundations of academic capitalism, as well as new empirical insights into how the process of academic capitalism has played out. Chapters address academic capitalism from historical, transnational, national, and local perspectives. Each contributor offers fascinating insights into both new conceptual interpretations of and practical institutional and national responses to academic capitalism. Incorporating years of research by influential theorists and building on the work of Sheila Slaughter, Larry Leslie, and Gary Rhoades, *Academic Capitalism in the Age of Globalization* provides a provocative update for understanding academic capitalism. The book will appeal to anyone trying to make sense of contemporary higher education.

Our Higher Calling, Second Edition

This is an unmistakable time of crisis and confusion about the purpose, value, and sustainability of higher education in the United States. Data continues to show substantial benefits for students who complete a four-year degree, yet Americans from all backgrounds are losing confidence in the nation's institutions of higher learning, and political and economic challenges for colleges and universities seem greater than ever. How can faculty, administrators, governing boards, and other stakeholders address these challenges effectively? Holden Thorp and Buck Goldstein draw on interviews with higher education thought leaders and their own experience inside and outside the academy to address these problems head on. Now in paperback with a new preface by the authors, *Our Higher Calling* presents a forceful case for the enduring value of higher education along with pragmatic recommendations for how campus leaders can engage in constructive dialogue about necessary change.

Higher Education: Handbook of Theory and Research

Published annually since 1985, the Handbook series provides a compendium of thorough and integrative literature reviews on a diverse array of topics of interest to the higher education scholarly and policy communities. Each chapter provides a comprehensive review of research findings on a selected topic critiques the research literature in terms of its conceptual and methodological rigor and sets forth an agenda for future research intended to advance knowledge on the chosen topic. The Handbook focuses on a comprehensive set of central areas of study in higher education that encompasses the salient dimensions of scholarly and policy inquiries undertaken in the international higher education community. Each annual volume contains chapters on such diverse topics as research on college students and faculty, organization and administration, curriculum and instruction, policy, diversity issues, economics and finance, history and philosophy, community colleges, advances in research methodology and more. The series is fortunate to have attracted annual contributions from distinguished scholars throughout the world.

Unequal Colleges in the Age of Disparity

Based on quantitative comparisons of colleges since the 1970s, Charles Clotfelter reveals that despite the civil rights revolution, billions spent on financial aid, and the commitment of colleges to greater equality, stratification in higher education has grown starker. He explains why undergraduate education—unequal in 1970—is even more so today.

The American Community College

A comprehensive analysis of community colleges in the United States—updated with the latest research The revised seventh edition of *The American Community College* is an essential resource for practitioners and graduate students in the field of higher education. This book has been providing up-to-date information and statistics about community colleges for four decades and is a trusted and revered reference. Covering community college students, faculty, curriculum, assessment, finance, governance, and more, this book provide a thorough understanding of the role community colleges play

in the American educational system. For educators, policymakers, and philanthropists alike, community colleges are important as the nexus of national efforts to prepare a highly skilled workforce and as the lynchpin of the K-20 education pipeline. This book delivers the facts and context readers need to make informed decisions in the community college space. Written by leading researchers in the field, *The American Community College* has been thoroughly revised with a greater focus on equity. Further, this edition includes access to online supplemental materials, including end-of-chapter guiding questions and a guide for transitioning from the 6th to the 7th edition. Additional updates include coverage of collaborations with community, economic, and workforce development organizations; a greater focus on entrepreneurship and innovation; recent efforts to improve student persistence and attainment through guided pathways and equity-minded student supports; and the growing emphasis on preparing a skilled workforce via noncredit training, credit for prior learning, micro-credentials, and community college baccalaureate programs. Readers of *The American Community College* will: Benefit from a comprehensive analysis of the most recent findings and up-to-date information on the American community college. Find completely revised and updated information about recent changes in the community college landscape Obtain current information on student access and outcomes, instruction, student services, and curricular functions Learn from updated tables and graphs that reflect the most current data and incorporate new examples of the services that colleges provide Since it was first published in 1982, *The American Community College* has become the primary resource that faculty, administrators, trustees, and researchers look to for information on these quintessentially American institutions.

Higher education's response to the Covid-19 pandemic

A particularly timely book, given the high proportion of international students and staff in higher education Public health was the immediate concern when the Covid-19 pandemic struck in Asia, then in Europe and other parts of the world. The response of our education systems is no less vital. Higher education has played a major role in responding to the pandemic and it must help shape a better, more equitable and just post-Covid-19 world. This book explores the various responses of higher education to the pandemic across Europe and North America, with contributions also from Africa, Asia and South America. The contributors write from the perspective of higher education leaders with institutional responsibility, as well as from that of public authorities or specialists in specific aspects of higher education policy and practice. Some contributions analyse how specific higher education institutions reacted, while others reflect on the impact of Covid-19 on key issues such as internationalisation, finance, academic freedom and institutional autonomy, inclusion and equality and public responsibility. The book describes the various ways in which higher education is facing the Covid-19 pandemic. It is designed to help universities, specifically their staff and students as well as their partners, contribute to a more sustainable and democratic future.

The Evolving College Presidency: Emerging Trends, Issues, and Challenges

Incoming college presidents are entering the job at a time when the role is increasingly challenging as they are asked to do more, decide and act faster, create and maintain more relationships, and demonstrate successes while under an unrelenting microscope. The range of leadership skills and competencies surrounding the current college presidency requires well-prepared and well-informed college presidential aspirants. Research shows there is no formal training framework available in colleges to prepare successful candidates for the presidency. Consequently, most incoming college presidents have lamented being ill-prepared for the role. *The Evolving College Presidency: Emerging Trends, Issues, and Challenges* provides guidance and career trajectory advice for aspiring college presidents as they prepare to take on this challenging and dynamic role. The text also explores the emerging trends, issues, and challenges of the college presidency including issues such as diversity and inclusion, funding and fundraising, and political issues. Covering a range of critical topics such as student affairs and community relationships, this reference work is vital for higher education professionals, administrators, researchers, practitioners, scholars, academicians, instructors, and students.

Critical Approaches to the Study of Higher Education

An essential guide to incorporating critical research into higher education scholarship. Winner of the Outstanding Publication Award of the Post-secondary Education Division of the American Educational Research Association Critical theory has much to teach us about higher education. By linking critical models, methods, and research tools with an advocacy-driven vision of the central challenges facing

postsecondary researchers and staff, *Critical Approaches to the Study of Higher Education* makes a significant—and long overdue—contribution to the development of the field. The contributors argue that, far from being overly abstract, critical tools and methods are central to contemporary scholarship and can have practical policy implications when brought to the study of higher education. They argue that critical research design and critical theories help scholars see beyond the normative models and frameworks that have long limited our understanding of students, faculty, institutions, the organization and governance of higher education, and the policies that shape the postsecondary arena. A rigorous and invaluable guide for researchers seeking innovative approaches to higher education and the morass of traditionally functionalist, rational, and neoliberal thinking that mars the field, this book is also essential for instructors who wish to incorporate the lessons of critical scholarship into their course development, curriculum, and pedagogy.

Teaching Practices and Language Ideologies for Multilingual Classrooms

While standard language ideology (SLI) is harmful in its exclusion of minorities through expression of language and race, translingualism provides a positive scaffolding characterized by the disposition of openness. Translingualism suggests that each utterance creates meaning and is a direct rebellion against SLI. It privileges unprivileged varieties of English over so-called Standard English. In order to combat SLI, scholars have emphasized the need for congenial multicultural spaces where students can use their cultural and linguistic resources as an asset and which supports the idea of students learning from each other through their diversity. *Teaching Practices and Language Ideologies for Multilingual Classrooms* is an essential scholarly publication that examines the educational necessities for diverse student populations and multilingual students and provides rich teaching resources for guiding the creation of classroom environments that engage multilingual students and support their writing and problem-solving skills. Featuring a range of topics such as ethics, code-switching, and language education, this book is ideal for teachers, instructional designers, academicians, sociologists, administrators, language professionals, researchers, and students.

Community College Models

Increasingly, students worldwide are seeking post-secondary education to acquire new skill-sets and credentials. There is an explosion of community college models that provide educational opportunities and alternative pathways for students who do not fit the traditional higher educational profile. This book focuses on economic models to help local and national economies develop strong workforce training, humanitarian models to bring about social mobility and peace, transformative models to help institutions expand and keep up with societal needs, and newly created models that respond to the educational and training needs of a constantly changing world. These models seek to capture the imagination of those who are committed to learning about what works in higher education and in particular, the impact community college models are having on the changing nature of world social, political and economic landscapes. With contributors representing 30 countries, this book presents an international perspective.

Handbook of Research on the Changing Role of College and University Leadership

Higher education has changed significantly over the past 50 years, and the individuals who provide leadership for these institutions has similarly changed. The pathway to the college presidency, once the domain of academic administration, has diversified as an increasing number of development officers, student affairs and enrollment management professionals, and even politicians have become common in the role. It is important to understand who the presidents are in the current environment and the challenges they face. Challenges such as dealing with the COVID-19 pandemic, enrollment shortfalls, Title IX, and athletic scandals have risen to the forefront and have contributed to the issues and role of college and university leadership. *The Handbook of Research on the Changing Role of College and University Leadership* provides important research on the topic of college and university leadership, especially focusing on the changing role of the college president. The chapters discuss college leadership as it is now and how it will evolve into the future. Topics included are the role of the president at various types of universities, their involvement within university functions and activities, and the duties they must carry out and challenges they face. This book is ideal for professionals and researchers working in higher education, including faculty members who specialize in education, public administration, the social sciences, and management, along with teachers, administrators, teacher

educators, practitioners, researchers, academicians, and students who are interested in college and university leadership and how this role is transforming.

Remaking College

Between 1945 and 1990 the United States built the largest and most productive higher education system in world history. Over the last two decades, however, dramatic budget cuts to public academic services and skyrocketing tuition have made college completion more difficult for many. Nevertheless, the democratic promise of education and the global competition for educated workers mean ever growing demand. *Remaking College* considers this changing context, arguing that a growing accountability revolution, the push for greater efficiency and productivity, and the explosion of online learning are changing the character of higher education. Writing from a range of disciplines and professional backgrounds, the contributors each bring a unique perspective to the fate and future of U.S. higher education. By directing their focus to schools doing the lion's share of undergraduate instruction—community colleges, comprehensive public universities, and for-profit institutions—they imagine a future unencumbered by dominant notions of "traditional" students, linear models of achievement, and college as a four-year residential experience. The result is a collection rich with new tools for helping people make more informed decisions about college—for themselves, for their children, and for American society as a whole.

The Role of Higher Education Financing in Strengthening U.S. Competitiveness in a Global Economy

Student retention, engagement, and success are some of the biggest challenges that administrators and university leaders face in higher education settings. As financial support and steep competition pose an issue to student acquisition and participation, especially within Historically Black Colleges and Universities, it becomes pertinent that these academic organizations implement new leadership practices to assist in the overall success of the student, as well as the institution. *Administrative Challenges and Organizational Leadership in Historically Black Colleges and Universities* examines how administrations in Historically Black Educational Institutions utilize different leadership techniques to overcome challenges of student retention and engagement. Focusing on student development practices, organizational collaboration, funding for institutions, and support provided from faculty and staff within Historically Black Colleges and Universities, this book is an essential reference for university administrators, educators, researchers, and graduate-level students in the fields of education and sociology.

Administrative Challenges and Organizational Leadership in Historically Black Colleges and Universities

This book describes the current state of universities on each continent, providing a comprehensive analysis of the numerous factors that have affected higher education systems around the world.

American Higher Education in a Global Context

Despite decades of substantial investments by the federal government, state governments, colleges and universities, and private foundations, students from low-income families as well as racial and ethnic minority groups continue to have substantially lower levels of postsecondary educational attainment than individuals from other groups. *The State of College Access and Completion* draws together leading researchers nationwide to summarize the state of college access and success and to provide recommendations for how institutional leaders and policymakers can effectively improve the entire spectrum of college access and completion. Springboarding from a seminar series organized by the Advisory Committee on Student Financial Assistance, chapter authors explore what is known and not known from existing research about how to improve student success. This much-needed book calls explicit attention to the state of college access and success not only for traditional college-age students, but also for the substantial and growing number of "nontraditional" students. Describing trends in various outcomes along the pathway from college access to completion, this volume documents persisting gaps in outcomes based on students' demographic characteristics and offers recommendations for strategies to raise student attainment. Graduate students, scholars, and researchers in higher education will find *The State of College Access and Completion* to be an important and timely resource.

The State of College Access and Completion

Free City! The Fight for San Francisco's City College and Education for All tells the story of the five years of organizing that turned a seemingly hopeless defensive fight into a victory for the most progressive free college measure in the US. In 2012, the accreditor sanctioned City College of San Francisco, one of the biggest and best community colleges in the country, and a year later proposed terminating its accreditation, leading to a state takeover. **Free City!** follows the multipronged strategies of the campaign and the diverse characters that carried them out. Teachers, students, labor unions, community groups, public officials, and concerned individuals saved a treasured public institution as San Francisco's working-class communities of color battled the gentrification that was forcing them out of the city. And they pushed back against the national "reform" agenda of corporate workforce training that drives students towards debt and sidelines lifelong learning and community service programs. Combining analysis with narrative, **Free City!** offers a case study in the power of positive vision and solution-oriented organizing and a reflection on what education can and should be.

Free City!

The concern that the democratic purposes of higher education -- and its conception as a public good -- are being undermined, with the growing realization that existing structures are unsuited to addressing today's complex societal problems, and that our institutions are failing an increasingly diverse population, all give rise to questioning the current model of the university. This book presents the voices of a new generation of scholars, educators, and practitioners who are committed to civic renewal and the public purposes of higher education. They question existing policies, structures, and practices, and put forward new forms of engagement that can help to shape and transform higher education to align it with societal needs. The scholars featured in this book make the case for public scholarship and argue that, in order to strengthen the democratic purposes of higher education for a viable future that is relevant to the needs of a changing society, we must recognize and support new models of teaching and research, and the need for fundamental changes in the core practices, policies, and cultures of the academy. These scholars act on their values through collaboration, inclusiveness, participation, task sharing, and reciprocity in public problem solving. Central to their approach is an authentic respect for the expertise and experience that all stakeholders contribute to education, knowledge generation, and community building. This book offers a vision of the university as a part of an ecosystem of knowledge production, addressing public problems with the purpose of advancing a more inclusive, deliberative democracy; and explores the new paradigm for teaching, learning, and knowledge creation necessary to make it a reality.

Publicly Engaged Scholars

Why the paradigm of the world-class university is an implausible dream for most institutions of higher education Universities have become major actors on the global stage. Yet, as they strive to be "world-class," institutions of higher education are shifting away from their core missions of cultivating democratic citizenship, fostering critical thinking, and safeguarding academic freedom. In the contest to raise their national and global profiles, universities are embracing a new form of utilitarianism, one that favors market power over academic values. In this book, James Mittelman explains why the world-class university is an implausible dream for most institutions and proposes viable alternatives that can help universities thrive in today's competitive global environment. Mittelman traces how the scale, reach, and impact of higher-education institutions expanded exponentially in the post-World War II era, and how the market-led educational model became widespread. Drawing on his own groundbreaking fieldwork, he offers three case studies—the United States, which exemplifies market-oriented educational globalization; Finland, representative of the strong public sphere; and Uganda, a postcolonial country with a historically public but now increasingly private university system. Mittelman shows that the "world-class" paradigm is untenable for all but a small group of wealthy, research-intensive universities, primarily in the global North. Nevertheless, institutions without substantial material resources and in far different contexts continue to aspire to world-class stature. An urgent wake-up call, *Implausible Dream* argues that universities are repurposing at the peril of their high principles and recommends structural reforms that are more practical than the unrealistic worldwide measures of excellence prevalent today.

Implausible Dream
