Electronic Devices and Circuit Theory

"This seventh edition of Malvino's classic Electronic Principles offers students a definitive overview of electronic circuits and devices. Expert knowledge of electronic devices is presented in a stimulating, clearly written, conversational style. The new, streamlined book design is full-color throughout, with ample, clear illustrations. Greater emphasis on modern integrated circuit (IC) technology, and the revision of nearly one third of the previous edition's chapter problems and review questions refresh this text while retaining its proven approach. In addition to the text there is a wealth of supplementary material included for both student and instructor. An upgraded Experiments Manual, the optional use of MultiSIM software, an instructor's manual with an Instructor Productivity Center CD-ROM, and the brand new Online Learning Center website make this text a powerful learning tool." Electronic Principles is written for electronics students who have done course work in basic DC/AC circuit analysis, along with algebra and trigonometry prerequisites. The book gives clear, accessible coverage of basic electronics concepts in the first half of the book, then applies these to the important electronic circuits and devices most widely used in today's industry."--Publisher's website.

RAFAEL's C-DOME is the naval adaptation of the renowned, combat-proven IRON DOME, which, to-date, has achieved over 5000 combat interceptions. Operational with the Israeli Navy, C-DOME is designed to protect strategic naval and land assets against a wide variety of threats.

C-GEM is designed to deceive the most advanced seekers of modern Anti-Ship Missiles (ASM). Modern coherent radar seekers employ Chaff and Corner Reflector discrimination algorithms, mostly based on range/Doppler analysis of the targets. The C-GEM off-board active decoy is launched from the combat vessel and generates a legitimate and attractive target within seconds from detection of the ASM. C-GEM can be integrated into any decoy launching system.

SPIKE NLOS is an electro-optically guided multipurpose missile for ranges of up to 32 km with pinpoint accuracy and midcourse navigation.

Another system being showcased also included RAFAEL's SEA BREAKER 5th generation autonomous precision guided missile. It enables significant attack performance against numerous high-value maritime and land targets. As a pinpoint force multiplier with standoff ranges up to 300 km and an advanced EO-imaging infrared seeker, SEA BREAKER is an ideal solution against stationary and moving land-based targets. It also offers superiority in A2/AD arenas, near-shore or between island targets, anchored or at port targets, or where radio frequency (RF) seekers are limited.
