General Clauses and Standards in European Contract Law

General clauses or standards (Generalklauseln, clauses generales) are legal rules which are not precisely formulated, terms and concepts which in fact do not even have a clear core. They are often applied in varying degrees in various legal systems to a rather wide range of contract cases when certain issues arise such as abuse of rights, unfairness, good faith, fairness of duty or loyalty or honesty, duty of care, and other such contract terms not lending themselves readily to clear or permanent definition. Here for the first time is a systematic discussion of this kind of rule in the evolving and dynamic context of European contract law. A collection of twelve insightful essays by leading European law authorities, the book is based on a conference organized jointly by the Society of European Contract Law (SECOLA) and l'association Henri Capitant, held in the 'grande salle' of the French Supreme Court in Paris in 2005. The subject is approached along three distinct but interconnected avenues: comparative contract law, in which the different models to be found among Member States particularly the Germanic, French, and English common law systems are explored with an eye to differences and common ground; EC contract law, in which the general clause approach has tended to focus on labour law and consumer law, and in which the European Court of Justice more and more assumes the final say; and the European codification dimension, in which a potential instrument on the European level would compete with national laws and develop closely with them. The authors demonstrate that a focus on general clauses in contract law, embracing as it does a wide range of types of contracts, helps enormously with the necessary integration of legal scholarship and economic approaches, and of legal science and legal practice in the field. Numerous analytic references to relevant cases and EC Directives give a practical impetus to the far-reaching but immediately applicable theory presented in this important book. As European contract law continues to develop rapidly, this seminal contribution is sure to increase in value and usefulness.

The Architecture of European Codes and Contract Law

The nineteen outstanding contributors to this deeply insightful book concur in envisioning a fundamentally new systematic concept of contract law that, while preserving the essential and 'architecture' of the existing European codes, would nonetheless find cogent ways to integrate such modern developments as mass transactions, chains and networks of contracts, regulation of markets and contracts to protect consumers, and service and long-term contracts into an optional European code. The book is organised along three major avenues: and • the systematic arrangement of a contract law code - how it deals with core questions of formation and performance or breach of contract, such as mistake and misrepresentation, standard contract terms, and remedies in the case of breach of contract; and • the apparent necessity to merge consumer contract law (i.e. such issues as product safety and liability, warranties, and consumer debt and insolvency) with traditional core contract law concepts; and and • the importance to substantive contract law of the pre-contractual phase, in which information duties are becoming steadily more paramount. The authors' perspectives cover a wide range of jurisdictions, including new EU Member States. The book and its commitment to an integration of comparative law, EC law, and the debate on European codification offers practitioners and academics fertile ground for the development of a new model of contract law that is more than a common denominator of what has been in force so far. This model may serve as a basis for Europe-wide and perhaps even worldwide discussion.

Commentaries on European Contract Laws

The book provides rule-by-rule commentaries on European contract law (general contract law, consumer contract law, the law of sale and related services), dealing with its modern manifestations as well as its historical and comparative foundations. After the collapse of the European Commission's plans to codify European contract law it is timely to reflect on what has been achieved over the past three to four decades, and for an assessment of the current situation. In particular, the production of a bewildering number of reference texts has contributed to a complex picture of European contract laws

rather than a European contract law. The present book adopts a broad perspective and an integrative approach. All relevant reference texts (from the CISG to the Draft Common European Sales Law) are critically examined and compared with each other. As far as the *acquis commun* (ie the traditional private law as laid down in the national codifications) is concerned, the Principles of European Contract Law have been chosen as a point of departure. The rules contained in that document have, however, been complemented with some chapters, sections, and individual provisions drawn from other sources, primarily in order to account for the quickly growing *acquis communautaire* in the field of consumer contract law. In addition, the book ties the discussion concerning the reference texts back to the pertinent historical and comparative background; and it thus investigates whether, and to what extent, these texts can be taken to be genuinely European in nature, ie to constitute a manifestation of a common core of European contract law. Where this is not the case, the question is asked whether, and for what reasons, they should be seen as points of departure for the further development of European contract law.

European Contract Law

The Association Henri Capitant des Amis de la Culture Juridique Française and the Société de législation comparée joined the academic network on European Contract Law in 2005 to work on the elaboration of a "common terminology" and on "guiding principles" as well as to propose a revised version of the Principles of European Contract Law (PECL). The results of this work were sent to the European Commission and have already been published in French. The English translation is now being published by sellier.eip. This work could contribute to the wider European project. The part on the guiding principles could be a component of the CFR, in the form of "black letter" model rules or recitals. The part on terminology is, in itself, useful for the elaboration of the final various linguistic versions of the CFR. It finds its place within the materials which will accompany the model rules. Last but by no means least, the revised version of the PECL should be considered by the European institutions as an alternative set of model rules on contract law.

Principles of European Contract Law and Italian Law

To provide valuable legal service to persons in today's Europe, practitioners must be conversant in both national and transnational law. At the European level, the Principles of European Contract Law (PECL) are an increasingly important element of contract law, together with national contract law, as contained in Civil Codes and various national statute. Accordingly, Kluwer Law International has initiated a series of volumes, under the direction of prof. Hondius of the University of Utrecht, comparing PECL with the most important European legal systems. This volume on Italian law is the second in the series. Using a straightforward comparative method, the editors' analysis not only reveals a significant area of convergence between the PECL and Italian contract law, but also highlights the main differences between the two bodies of rules. The reasons for these differences, both legal and non-legal (such as historical, social, economic), are clearly set forth. The book provides complete texts, with annotations, of the PECL and the corresponding Italian rules. The presentation proceeds as follows: general provisions (scope of application, general duties, terminology) formation of contracts (general provisions, offer and acceptance, liability for negotiations) authority of agents (general provisions, direct and indirect representation) validity interpretation contents and effects performance non-performance and remedies in general particular remedies for non-performance (right to performance, withholding performance, termination of the contract, price reduction, damages and interest) The editors' commentary includes extensive reference to case law and legal doctrine at all essential points. In this way they provide a comprehensive description of the law in action as well as its evolving trends. In addition, incisive essays by two leading experts in the field of comparative law, prof. Rodolfo Sacco and prof. Michael Joachim Bonell, analyse the relationship of the PECL and Italian law and its wider framework in the harmonisation of private law at the European and international levels. The book is a valuable handbook and guide for both foreign and Italian lawyers. For non-Italian lawyers, be they practitioners or academics, it provides a concise but complete and up-to-date outline of current Italian contract law, organized on the basis of a system (PECL) with which many European lawyers are familiar. For Italian lawyers, it offers a clearer insight into a wider European legal contract system whose importance in the evolution of a common European private law is growing rapidly. Fundamental Rights in European Contract Law

Our modern insistence on democratic social values has engendered an intense debate over the intersection of fundamental rights and contract law. In particular, case law in several European national jurisdictions has exerted significant pressure on traditional contract law instruments to conform more transparently with the fundamental rights enshrined in the EC Charter. This pressure is clearly evident in a number of societal areas subject to contract law, among them employment, housing, and privacy. It can even be argued, as this author does, that fundamental rights intermediate between politics and law. Taking its cue from many initiatives toward the development of a more coherent, even harmonised, European contract law, this book is the first major study to examine the following essential questions with detailed reference to actual judicial developments: • To what extent do fundamental rights affect contract law? • In which types of cases can fundamental rights be applied? • What does the explicit consideration of fundamental rights add to contract law adjudication? The author approaches the analysis along two different avenues: first, a comparative overview of developments in case law, and second, a more general theoretical view on the interaction between fundamental rights and rules of contract law which is tested against examples from various legal systems. The focus throughout is on developments in case law, because the impact of fundamental rights in contract law has been felt on the level of dispute resolution rather than on the level of legislation. Germany and the Netherlands are chosen because their judiciaries have been notable for their early and continuing attention to the theme, and England and Italy for perspectives on developments under common law and civil law systems respectively.

Constitutional Values and European Contract Law

Two major developments in European Private and European Business Law come together when we speak about "Constitutional Values and European Contract Law". European Contract Law has become extremely dynamic over the last 10 years, both in substance and perspective: all core areas are considered now in legal science and in EC legislation, and there are even the prospects of some kind of codification. On the other hand, constitutional values and their impact on private law have been an issue of high concern in major Member States over decades, namely Italy and Germany, but as well the Netherlands - hence the strong presence of scholars and practising lawyers from these countries in this book. Constitutional values have, however, found their way to the EC level and the national discussions have inspired a European one, with three core values discussed: Fundamental Freedoms, fundamental rights and constitutional system building principles- such as the social welfare state or the rule of law. Their impact on private law can be sensed nowadays quite considerably also on the European level. These fundamental values are often seen as the ingredient, which renders European Private Law, namely European Contract Law, more responsive to social values or more "humane". For all these reasons, the book combines comparative law, EC Law and interdisciplinary approaches to the question "Constitutional Values and European Contract Law". Outstanding scholars from six Member States and beyond - quite a few also practising lawyers - discuss the issue and do so for the first time on such a broad and all-encompassing basis.

European Contract Law

This edition includes many updates and revisions to the first edition, especially in light of the changes to the French Code Civil. Furthermore, the book comprises a wealth of translated extracts of legislation, cases, and academic literature. This text comprehensively covers all aspects of contract law in several European jurisdictions.

Towards a European Civil Code

In 1989 the European Parliament called for the elaboration of a European Civil Code and although the European Commission has not yet shown much enthusiasm for this idea, many legal scholars consider it to be a great challenge. the desirability and possible content of a European Civil Code. The book is divided into two parts. The first part examines the general issues which concern the unification of private law in Europe. private law that were considered to be appropriate for a unification on a European level. Because of the numerous reference made throughout the book to the UNIDROIT Principles for International Commercial Contracts and to the Principles of European Contract Law, these texts have been reproduced in an annex to this book.

European contract law

This particular report from the European Union Committee (HLP 95, ISBN 9780108444364) considers the proposal for a Draft Common Frame of Reference in respect of European contract law. The Draft contains principles, definitions and model rules in the form of a code covering wide areas of Civil Law. The Committee notes some significant issues relating to the general approach the Draft adopts, along with differences between the model rules set out in the Draft and the provisions of English common law. The Committee remains opposed to a harmonised code of European contract law and does not believe the European Commission has a useful role in promoting or developing an alternative set of contractual terms for use by contracting parties. It believes one way forward may be for the Commission to identify particular key areas that give difficulty under existing Community law or are likely to require legislative intervention. The Committee recognises the value of the Draft as an academic work by presenting useful material for discussion and can act as an aid to the mutual understanding of the diverse legal systems represented in the European Union.

The Constitutional Foundations of European Contract Law

Based on the author's thesis (Ph.D.)--University of Leuven, 2010.

Principles of European Contract Law

This volume offers proposed Articles, followed by comments and information. Topics include: plurality of debtors and creditors, assignment, substitution of new debtor and transfer of contract, set-off, prescription, illegality, and conditions and capitalisation of interest.

Contents and Effects of Contracts-Lessons to Learn From The Common European Sales Law

This book presents a critical analysis of the rules on the contents and effects of contracts included in the proposal for a Common European Sales Law (CESL). The European Commission published this proposal in October 2011 and then withdrew it in December 2014, notwithstanding the support the proposal had received from the European Parliament in February 2014. On 6 May 2015, in its Communication 'A Digital Single Market Strategy for Europe', the Commission expressed its intention to "make an amended legislative proposal (...) further harmonising the main rights and obligations of the parties to a sales contract". The critical comments and suggestions contained in this book, to be understood as lessons to learn from the CESL, intend to help not only the Commission but also other national and supranational actors, both public and private (including courts, lawyers, stakeholders, contract parties, academics and students) in dealing with present and future European and national instruments in the field of contract law. The book is structured into two parts. The first part contains five essays exploring the origin, the ambitions and the possible future role of the CESL and its rules on the contents and effects of contracts. The second part contains specific comments to each of the model rules on the contents and effects of contracts laid down in Chapter 7 CESL (Art. 66-78). Together, the essays and comments in this volume contribute to answering the question of whether and to what extent rules such as those laid down in Art. 66-78 CESL could improve or worsen the position of consumers and businesses in comparison to the correspondent provisions of national contract law. The volume adopts a comparative perspective focusing mainly, but not exclusively, on German and Dutch law.

The Emergence of EU Contract Law

The emergence of an EU contract law is one of the most significant legal developments in Europe today. Exploring the origins and evolution of the discipline, from the Sales Directive to the Common Frame of Reference, the book advances a framework for the further harmonization of contract law that embraces diversity and pluralism.

The Future of the Commercial Contract in Scholarship and Law Reform

This book explores commercial contract law in scholarship and legal practice, suggests new research agendas and provides a forum for debate of typical issues that might benefit from further attention by scholarship and legislatures. The authors from over ten different jurisdictions take an international and comparative approach. Not confined to EU law it re-opens the debate internationally and seeks to reclaim the wider meaning of European law as rooted in geography and cultural legal heritage. There is a need to focus on commercial contracts in more detail in research and legislation. The transactional approach, the role of recent law reform, including the new French Civil Code, cross-border dealings, substantive contract law in public international law and ICSID arbitration as well as current

contractual practices like OEM, CSR, contractual co-operation, sustainability and intra-corporate arbitration contribute to a wider regulatory outlook for commercial transactions.

The Principles of European Contract Law (Part III) and Dutch Law

The Principles of European Contract Law, prepared by the so-called Lando Commission, today constitute the most advanced project on the harmonisation of European private law. As well as providing a set of rules which could facilitate cross-border trade within Europe, the Principles can be seen as a modern *lex mercatoria* which, for example, could be referred to by arbitrators deciding a case according to internationally accepted principles of law. Furthermore, the Principles provide a framework for EU legislation on contract law and, more importantly, they can be viewed as a first step towards a European Civil Code. They may also prove to be a catalyst for the development of national legislation, judicial decisions and legal doctrine. This new title, which follows the first volume covering Parts I and II of the Principles, includes chapters on plurality of parties, assignment of claims, transfer of contract, set-off, prescription, illegality and conditions. It provides a systematic overview of the Principles in comparison with Dutch law, which will be of interest not only in the Netherlands but also to lawyers in other countries who need to gain a clearer understanding of the Dutch contract law system.

European Private Law After the Common Frame of Reference

The book is a must read for anybody interested in the future development of European private law. **European Private Law News** This volume contains a valuable collection of essays by a group of reputable academics, each dealing with a particular aspect of the development of a substantive law of contract at European level. The contributors have a variety of interests and perspectives. The topic is clearly of great current interest throughout the European Union and beyond. Peter Stone, University of Essex, UK **European Private Law after the Common Frame of Reference** brings together several interesting contributions from a distinguished group of scholars, and sheds light on the important issue of legal harmonization from an interdisciplinary and comparative perspective. Francesco Parisi, University of Minnesota, US and University of Bologna, Italy **The Common Frame of Reference** has several potential functions, some reconcilable, others mutually exclusive. Its size, its shape, its true legal nature and its content all remain contested. Modest or ambitious, toolbox or code-in-waiting? Its chameleon character is its strength and simultaneously its weakness, and equally the reason why it has attracted such attention. In this book the editors have assembled a veritable who's who in the field and it is a terrific read. Stephen Weatherill, University of Oxford, UK This book paves the way for, and initiates, the second-generation of research in European private law subsequent to the Draft Common Frame of Reference (DCFR) needed for the 21st century. The book gives a voice to the growing dissatisfaction in academic discourse that the DCFR, as it stands in 2009, does not actually represent the condensed available knowledge on the possible future of European private law. The contributions in this book focus on the legitimacy of law making through academics both now and in the future, and on the possible conceptual choices which will affect the future of European private law. Drawing on experience gained from the DCFR the authors advocate the competition of ideas and concepts. This fascinating book will be a must-read for European lawyers, private lawyers in the Member States and academics dealing with conceptual issues of the future of the national and the European private law. Advanced students in both law and international business will also find this book invaluable, as will US scholars interested in the US EU comparison of different legal orders.

EU Law and Private International Law

European Union Law and Private International Law both attempt to resolve a conflict of laws. There is however a certain tension between the two disciplines. The present book proposes suggestions to enhance their mutual understanding.

Uniform Rules for European Contract Law?

Over the last 30 years, the evolution of *acquis communautaire* in consumer law and harmonising soft law proposals have utterly transformed the landscape of European contract law. The initial enthusiasm and approval for the EU programme has waned and, post Brexit, it currently faces increasing criticism over its effectiveness. In this collection, leading academics assess the project and ask if such judgments are fair, and suggest how harmonisation in the field might be better achieved. This book looks at the uniform rules in the context of: the internal market; national legislators and courts; bridging the gap between common and civil law; and finally their influence on non-member states. Critical and rigorous,

it provides a timely and unflinching critique of one of the most important fields of harmonisation in the European Union.

Standard Contract Terms in Europe

Ever since the Directive on Unfair Terms in Consumer Contracts of 1993, the European project has been working intensively towards harmonization of contract law across all EU Member States. To date, virtually none of the many problems that have arisen have been resolved. The SECOLA Annual Conference convened in Prague in 2005 to consider the specific topic of unfair terms and to imagine ways in which the obstacles raised by this provocative issue might be overcome. In this book, which presents revised versions of the papers presented at that conference, fourteen outstanding European scholars examine basic questions about the differing conceptions of contract law in the national legal systems of the Member States, divergent legal techniques such as interpretation of contract and divergent approaches to legal reasoning, and contrasting views about the nature of the problems presented by unfair terms in contracts. Among the contentious matters discussed are the following: the tension between party autonomy and social justice; control over freedom of contract in the name of substantive fairness and efficiency; interpretation of contract terms the intrusion of competition law into contract law; the disputed meanings of good faith and legitimate expectations; the requirement of 'plain intelligible language'; and characterization problems. Above all the essays ask: Can harmonization of European contract law be achieved? And if so, how? The answers offered not only clarify the stage we have arrived at in this ongoing initiative, but also identify the essential conflicts that must be understood if we are to secure meaningful regulation of contract terms at a transnational level. For these reasons the book is enormously valuable to all parties interested in this crucial component of European integration.

An Academic Green Paper to European Contract Law

The Contract is the core tool of governance in a free market economy. An EU Contract Law Code is now on the political agenda because all three legislative bodies in the EU and most member states favour it in principle. In its communication of July 2001, the Commission proposed three major options: to enhance the existing EC Contract Law by eliminating inconsistencies; introducing a European Code which substitutes national laws; and introducing a European code which only supplements national laws. This book achieves three things: For the first time, European academia is discussing these three options in an extensive and systematic way with pros and cons, in a transparent and systematic way, along broad lines and often also important details. The book contains the views of all protagonists from all those who really drafted the models to all those who illustrated the potential of decentralized rule-making and invented the very idea of an Optional Code. This is the first book in which the optional Code, which is the alternative most likely to come, is thoroughly analysed at all. This work also contains a full map of design possibilities. It is the executive summary of what European academia thinks of the future of European Contract Law and a European Code. It is the Academic Green Paper on European Contract Law.

Principles, Definitions and Model Rules of European Private Law

In this volume, the Study Group and the Acquis Group present the first academic Draft of a Common Frame of Reference (DCFR). The Draft is based in part on a revised version of the Principles of European Contract Law (PECL) and contains Principles, Definitions and Model Rules of European Private Law in an interim outline edition. It covers the books on contracts and other juridical acts, obligations and corresponding rights, certain specific contracts, and non-contractual obligations. One purpose of the text is to provide material for a possible "political" Common Frame of Reference (CFR) which was called for by the European Commission's Action Plan on a More Coherent European Contract Law of January 2003.

Contract II

The present volume is the second of a series. In addition to revising those parts of the ACQP which were published in the "Contract I" volume, it presents numerous new rules, in particular on remedies for non-performance and on certain specific situations or contracts such as delivery of goods, package travel and payment services. The work is particularly aimed at enriching the current controversial debate on the way forward for European contract and consumer law stimulated by the European Commission's Proposal for a Directive on Consumer Rights. The Acquis Principles include: - General rules formulated on the basis of existing EC law - An accompanying commentary, outlining the foundations in the

Acquis - Definitions of core legal terms and a glossary on terminology The Acquis Group aims to reformulate the present patchwork of directives, regulations and judgments on EC private law as a coherent Restatement, the Acquis Principles (ACQP). These Principles present the current state of EC law in a structure which allows readers to identify commonalities, contradictions and gaps in the Acquis.

The Common European Sales Law in Context

European Contract Law unification projects have recently advanced from the Draft Common Frame of Reference (2009) to a European Commission proposal for an optional Common European Sales Law (2011) which is to facilitate cross-border marketing. This book investigates for the first time how CESL and DCFR rules would interact with various aspects of domestic law, represented by English and German law. Nineteen chapters, co-authored by British and German scholars, examine such interface issues for eg pre-contractual relationships, notions of contract, formation, interpretation, and remedies, extending to non-discrimination, third parties, transfers or rights, aspects of property law, and collective proceedings. They go beyond a critical analysis of CESL and DCFR rules by demonstrating where and how CESL rules would interact with neighbouring areas of English and German law before English and German courts, how domestic traditions might influence the application, which aspects might motivate sellers and buyers to choose or reject CESL, and which might serve as model for national legislators. The findings are summarized in the final two chapters.

Rules and Principles in European Contract Law

In its case law the Court of Justice of the European Union has acknowledged general principles of EU law, which have a constitutional status. In addition the Court of Justice has also recognised 'general principles of civil law', relying upon values which are traditionally rooted in the domain of private law. The pervasive use of principles, both in the case law of the Court of Justice and in other EU projects of 'soft' and 'hard' law, challenges legal scholarship. Although the concepts of principles and rules have been widely discussed within the context of national legal orders, they need to be rethought at the European level, because the traditional view of a principle does not fit the European Union's constitutional architecture. This also applies to the general principles of civil law, for instance good faith. They also have to be redefined to be consistent with the European Union's legal order. The contributions in this book examine EU general principles and their distinction from rules both within the context of the European Union as well as of the Member States. Moreover, they focus on the relevance of EU general principles for contract law and of principles of civil law for a European contract law

The Interaction of Contract Law and Tort and Property Law in Europe

Against the background of the creation of an EU-wide frame of reference for private law relevant to the Common Market, this study, which was requested by the EU Commission, analyses the dovetailing between contract and tort law on the one hand, and between contract and property law on the other. The study examines the legal orders of almost all the Member States of the EU, illustrates the differences between contractual and non-contractual liability and evaluates the different systems of the transfer of property, of movable and immovable securities as well as trust law. The study comes to the conclusion that the intensive considerations on the creation of a model-law in the area of European private law do not allow these thoughts to be limited to contract law. Such a limitation to the scope of the regarding of this area would probably cause more problems than it would solve, or at any rate not do justice to the needs of the Common Market.

Basil Markesinis: Leading the way to a 'new ius europaeum' - A review and appraisal of the Europeanization of Private Law

Seminar paper from the year 2006 in the subject Law - Comparative Legal Systems, Comparative Law, grade: 13, Saarland University, language: English, abstract: It is now widely accepted that the law of the European member states should be harmonized to make Europe's economy more competitive. Business needs to operate across borders efficiently to stimulate a more competitive supply of goods and services. A plurality of separate solutions for the same issue is a risk that the uncertainty and complexity of the legal environment will undermine rather than enable legitimate economic activity. Therefore we need to create an economic environment underpinned by legal certainty and security. This essay on European Private Law discusses the progress of Europeanization in the field of Contract Law. It will, in doing so, especially focus on legal education and its contribution to achieve unification

and harmonisation of European Union law. But, as the title indicates, in the actual centre of this essay, will be one scholar, who has significantly contributed to the understanding of comparative law and who has increased its status as a recognised legal subject: Basil Markesinis. It is furthermore my goal to provide English law students who are interested in comparative law topics with a guide to useful literature for their studies, especially with regards to German Law. I hope that this essay can contribute that comparative law may no longer be a "subject in search of an audience", as Markesinis called it[1], and to persuade English students of the benefits of comparative law studies.

The Politics of the Draft Common Frame of Reference

This collection of essays reflects both the diversity of the group's work and the common thread that runs through it. The core claim here is that the DCFR, despite the Commission's characterization of its proposals as purely technical, cannot escape politics. The intent is to critically identify and evaluate the model of social justice underlying the DCFR.

Dispute Avoidance and European Contract Law

Since early 2000, European institutions have politically prioritized the need for greater coherence and uniformity in European private law. Contract law, in particular, has remained center stage. Concerns - that the functioning of the Community's internal market has been hampered by divergence in Member States' national contract rules, and that both business and consumers are dissuaded from contracting cross-border - have prompted a series of landmark Communications and an Action Plan. Most recently, there has been full institutional support for the delivery of a decidedly cryptic 'Common Frame of Reference, ' comprised of general principles, model rules, and uniform legal terminology. Despite a lack of convincing empirical data in support of the convergence thesis, a diminished business interest has in part allowed the proponents of a comprehensive codification of private law to set the political and academic agenda. Yet this clamor for codification has in many respects overlooked the mechanics of commercial contracting in particular, the importance of contract drafting, and the complex negotiations that lead to deals both domestically and cross border. This book therefore engages with two 'holy grails' of modern contract scholarship - the appropriate design of EC contract rules and judicial treatment of preliminary incomplete bargains. In so doing, the study reveals the weakness of existing soft law initiatives and framework codes in capturing the degree of specificity and complexity in the field. Instead, the case is made for a viable methodology of dispute avoidance aimed at re-conceptualizing and re-orientating the harmonization effort

New Features in Contract Law

Economic change, globalisation and harmonisation of European Law have brought new challenges to contract law. The contributions in this Volume by prominent legal scholars deal with current trends and perspectives in European and International Contract Law and their impact on the various domestic legal systems. The Compendium provides an analysis of new developments in formation of contract, performance and remedies, consumer contract law and the particularly controversial area of anti-discrimination law. Experts in their field examine the underlying legal principles and problems arising in legal practice in Common Law and Civil Law. The essays written in English, German and French are the product of a series of lectures held in 2006 at the Centre for European Private Law (CEP) at the University of Münster, Germany. The contributing authors are: John Adams, Hugh Beale, Giuditta Cordero-Moss, Barbara Dauner-Lieb, Michele Graziadei, Thomas Gutmann, Geraint Howells, Simon James, Paul Lagarde, Matthias Lehmann, Peter Møgelvang-Hansen, Salvatore Patti, Thomas Pfeiffer, John C. Reitz, Judith Rochfeld, Martin Schmidt-Kessel, Jürgen Schmidt-Räntsch, Alessandro Somma, Stefano Troiano, Christian Twigg-Flesner, Antoni Vaquer Aloy and Fryderyk Zoll.

Research Handbook on EU Consumer and Contract Law

Research Handbook on EU Consumer and Contract Law takes stock of the evolution of this fascinating area of private law to date and identifies key themes for the future development of the law and research agendas. The Handbook is divided into three parts:

Cases, Materials and Text on Contract Law

This is the third edition of the widely acclaimed and successful casebook on contract in the *Ius Commune* series, developed to be used throughout Europe and beyond by anyone who teaches,

learns or practises law with a comparative or European perspective. The book contains leading cases, legislation and other materials from English, French and German law as the main representatives of the legal traditions within Europe, as well as EU legislation and case law and extracts from the Principles of European Contract Law. Comparisons are also made to other international restatements such as the Vienna Sales Convention, the UNIDROIT Principles of International Commercial Contracts, the Draft Common Frame of Reference and so on. Materials are chosen and ordered so as to foster comparative study, complemented with annotations and comparative overviews prepared by a multinational team. The third edition includes many new developments at the EU level (including the ill-fated proposal for a Common European Sales Law and further developments linked to the digital single market) and in national laws, in particular the major reform of the French Code civil in 2016 and 2018, the UK's Consumer Rights Act 2015 and new cases. The principal subjects covered in this book include: An overview of EU legislation and of soft law principles, and their interrelation with national law The distinctions between contract and property, tort and restitution Formation and pre-contractual liability Validity, including duties of disclosure Interpretation and contents; performance and non-performance Remedies Supervening events Third parties.

The Harmonisation of European Contract Law

After an extended period in which the European Community has merely nibbled at the edges of national contract law, the bite of a 'European contract law' has lately become more pronounced. Many areas of law, from competition and consumer law to gender equality law, are now the subject of determined efforts at harmonisation, though they are perhaps often seen as peripheral to mainstream commercial contract law. Despite continuing doubts about the constitutional competence of the Commission to embark on further harmonisation in this area, European contract law is now taking shape with the Commission prompting a debate about what it might attempt. A central aspect of this book is the report of a remarkable survey carried out by the Oxford Institute of European and Comparative Law in collaboration with Clifford Chance, which sought the views of European businesses about the advantages and disadvantages of further harmonisation. The final report of this survey brings much needed empirical data to a debate that has thus far lacked clear evidence of this sort. The survey is embedded in a range of original and up-to-date essays by leading European contract scholars reviewing recent developments, questioning progress so far and suggesting areas where further analysis and research will be required

The Foundations of European Private Law

There remains an urgent need for a deeper discussion of the theoretical, political and federal dimensions of the European codification project. While much valuable work has already been undertaken, the chapters in this volume take as their starting point the proposition that further reflection and critical thought will enhance the quality and efficacy of the on-going work of the various codification bodies. The volume contains chapters by representatives of the Common Frame of Reference, the Study Group and the Acquis Group as well as by those who have not been involved in particular projects but who have previously commented more distantly on their work - for instance those belonging to the Trento Group, and the Social Justice Group. The chapters between them represent the most comprehensive attempt so far to survey the state of the codification project, its theoretical, political and federal foundations and the future prospects for enforcement and compliance.

Principles of European Law

The research of the Study Group on a European Civil Code seeks to advance the process of Europeanisation of private law by drafting a set of common European principles which are relevant for the functioning of the common market. The principles provide national jurisdictions with a grid reference for the future development of the law.

Contract I

The Acquis Group - also known as the European Research Group on Existing EC Private Law - pursues the objective of presenting, in a restated form known as the Acquis Principles, the large and sometimes incoherent patchwork of existing EC private law. These principles reflect the current state of EC law in a structure which allows for the identification of commonalities, contradictions, and gaps. They function as a tool for the better understanding and improvement of EC private law. They are also intended to ensure that the existing EC law is appropriately reflected in the broader Common Frame of Reference.

The principles include a commentary outlining the Acquis foundations, as well as definitions of core legal terms and a glossary on terminology. Formulated with the Acquis Principles in mind, Contract I is the first of a new series. It covers the areas of general EC contract law which surround the formation of contracts, including key rules on pre-contractual duties, the conclusion of a contract, and its content.

Principles, Definitions and Model Rules of European Private Law

This landmark reference work marks the culmination of over 20 years' research into the history and potential future of European private law. An international team of researchers have analyzed the diverse national traditions of private law to compile a codified set of principles of European law for the law of obligations and core aspects of the law of property - known as the Draft Common Frame of Reference. This full edition of the reference work comes complete with all the scholarly apparatus needed to interpret the principles. Full commentary is provided on the text of the 'draft common frame of reference', together with references to and comparative analysis of all the national legal materials used as a basis of the text. The complete work will form a central reference point for all future discussion of the harmonization of European private law, and the interpretation of EU measures in the field. It also represents a major reference work in its own right, offering the fullest resource available on European private law, invaluable for researchers in comparative law and European legal history.

The Organizational Contract

This book introduces and develops the paradigm of the organisational contract in European contract law. Suggesting that a more radical distinction should be made between contracts which regulate single or spot exchanges and contracts that organize complex economic activities without creating a new legal entity, the book argues that this distinction goes beyond that between spot and relational contracts because it focuses on the organizational dimension of contracting and its governance features. Divided into six parts, the volume brings together a group of internationally renowned experts to examine the structure of long-term contractual cooperation; networks of contracts; knowledge exchange in long-term contractual cooperation; remedies and specific governance rules in long-term relationships; and the move towards legislation. The book will be of value to academics and researchers in the areas of private law, economic theory and sociology of law, and organizational theory. It will also be a useful resource for practitioners working in international contract law and international business transaction law.

Economic Analysis of the DCFR

The Economic Impact Group (EIG) was created to support the work on the DCFR with insights from law and economics. It brings together a number of leading European law and economics scholars. The Group looked at the main elements of the DCFR with two questions in mind: from an economic perspective, is it sensible to harmonize private law across Europe for this specific element, and is the solution chosen in the DCFR optimal? This book presents the outcome of the work of the EIG. It deals with key issues such as the function of contract law, contract formation, good faith, non-discrimination, specific performance versus damages, standard contractual terms and consumer protection in contract law. The EIG complements the work of the drafters of the DCFR with insightful and critical assessments, based on the well-established law and economics literature.

The Role of the EU in Transnational Legal Ordering

This book explores questions of transnational private legal theory in the context of the external dimension of EU private law. The interaction between existing theories of transnational ordering and the external reach of European Regulatory Private Law is articulated through examination of what are found to be the three major proxies of transnational private ordering: private contracts, standards and codes.

Neurobiology

This volume is one of those published from the proceedings of the invited lectures to the First International Congress of Comparative Physiology and Biochemistry I organized at Liege (Belgium) in August 1984 under the auspices of the Section of Comparative Physiology and Biochemistry of the International Union of Biological Sciences. In a general foreword to these different volumes, it seems to

me appropriate to consider briefly what may be the comparative approach. Living organisms, beyond the diversity of their morphological forms, have evolved a widespread range of basic solutions to cope with the different problems, both organismal and environmental with which they are faced. Soon after the turn of the century, some biologists realized that these solutions can be best comprehended in the frame work of a comparative approach integrating results of physiological and biochemical studies done at the organismic, cellular and molecular levels. The development of this approach amongst both physiologists and biochemists remained, however, extremely slow until recently.

Neurobiology of Comparative Cognition

This book represents a unique and elaborate exposition of the neural organization of language, memory, and spatial perception in a wide variety of species including humans, bees, fish, rodents, and monkeys. The editors have united the comparative approach with its emphasis on evolutionary determinants of behavior, the neurobiological approach with its emphasis on the neural determinants of behavior, and the cognitive approach with its emphasis on understanding higher-order mental functions. The combination of these three approaches provides an unusual look at the neurobiology of comparative cognition, and should stimulate increased investigations in this field and related disciplines.

Evolution of the First Nervous Systems

This book represents the proceedings of a NATO Advanced Research Workshop of the same name, held at St. Andrews University, Scotland in July of 1989. It was the first meeting of its kind and was convened as a forum to review and discuss the phylogeny of some of the cell biological functions that underlie nervous system function, such matters as intercellular communication in diverse, lower organisms, and the electrical excitability of protozoans and cnidarians, to mention but two. The rationale behind such work has not necessarily been to understand how the first nervous systems evolved; many of the animals in question provide excellent opportunities for examining general questions that are unapproachable in the more complex nervous systems of higher animals. Nevertheless, a curiosity

about nervous system evolution has invariably pervaded much of the work. The return on this effort has been mixed, depending to a large extent on the usefulness of the preparation under examination. For example, work on cnidarians, to many the keystone phylum in nervous system evolution simply because they possess the "first" nervous systems, lagged behind that carried out on protozoans, because the latter are large, single cells and, thus, far more amenable to microelectrode-based recording techniques. Furthermore, protozoans can be cultured easily and are more amenable to genetic and molecular analyses.

Modern neuroscience research is inherently multidisciplinary, with a wide variety of cutting edge new techniques to explore multiple levels of investigation. This Third Edition of Guide to Research Techniques in Neuroscience provides a comprehensive overview of classical and cutting edge methods including their utility, limitations, and how data are presented in the literature. This book can be used as an introduction to neuroscience techniques for anyone new to the field or as a reference for any neuroscientist while reading papers or attending talks. Nearly 200 updated full-color illustrations to clearly convey the theory and practice of neuroscience methods Expands on techniques from previous editions and covers many new techniques including in vivo calcium imaging, fiber photometry, RNA-Seq, brain spheroids, CRISPR-Cas9 genome editing, and more Clear, straightforward explanations of each technique for anyone new to the field A broad scope of methods, from noninvasive brain imaging in human subjects, to electrophysiology in animal models, to recombinant DNA technology in test tubes, to transfection of neurons in cell culture Detailed recommendations on where to find protocols and other resources for specific techniques "Walk-through" boxes that guide readers through experiments step-by-step

Guide to Research Techniques in Neuroscience

In this volume outstanding specialists review the state of the art in nervous system research for all main invertebrate groups. They provide a comprehensive up-to-date analysis important for everyone working on neuronal aspects of single groups, as well as taking into account the phylogenesis of invertebrates. The articles report on recently gained knowledge about diversification in the invertebrate nervous systems, and demonstrate the analytical power of a comparative approach. Novel techniques in molecular and developmental biology are creating new perspectives that point toward a theoretical foundation for a modern organismic biology. The comparative approach, as documented here, will engage the interest of anyone challenged by the problem of structural diversification in biology.

The Nervous Systems of Invertebrates: An Evolutionary and Comparative Approach

Evolutionary Neuroscience is a collection of articles in brain evolution selected from the recent comprehensive reference, *Evolution of Nervous Systems* (Elsevier, Academic Press, 2007). The selected chapters cover a broad range of topics from historical theory to the most recent deductions from comparative studies of brains. The articles are organized in sections focused on theories and brain scaling, the evolution of brains from early vertebrates to present-day fishes, amphibians, reptiles and birds, the evolution of mammalian brains, and the evolution of primate brains, including human brains. Each chapter is written by a leader or leaders in the field, and has been reviewed by other experts. Specific topics include brain character reconstruction, principles of brain scaling, basic features of vertebrate brains, the evolution of the major sensory systems, and other parts of brains, what we can learn from fossils, the origin of neocortex, and the evolution of specializations of human brains. The collection of articles will be interesting to anyone who is curious about how brains evolved from the simpler nervous systems of the first vertebrates into the many different complex forms now found in present-day vertebrates. This book would be of use to students at the graduate or undergraduate levels, as well as professional neuroscientists, cognitive scientists, and psychologists. Together, the chapters provide a comprehensive list of further reading and references for those who want to inquire further.

Current Protocols in Neuroscience (CPN) draws from techniques in molecular neurobiology, neurophysiology, neuroanatomy, neuropharmacology, and behavioral neuroscience to meet the specific needs of researchers in the full range of disciplines that is involved in studying the brain, nervous

system, and corresponding behaviors. The editorial board of CPN have assembled an outstanding range of methods to enable users to explore their fields in greater depth and branch into related areas. The one-volume, looseleaf manual features carefully edited techniques with authors' troubleshooting tips and helpful comments that come from extensive experience in using these procedures. Quarterly updates, filed into the looseleaf, keep you and your laboratory current with the latest developments in this rapidly changing field. The initial purchase includes one year of updates and then subscribers may renew their annual subscriptions. Current Protocols publishes a family of laboratory manuals for bioscientists, including Molecular Biology, Immunology, Human Genetics, Protein Science, Cytometry, Cell Biology, Pharmacology, and Toxicology.

Comparative Neuroscience and Neurobiology

The complexities of the brain and nervous system make neuroscience an inherently interdisciplinary pursuit, one that comprises disparate basic, clinical, and applied disciplines. Behavioral neuroscientists approach the brain and nervous system as instruments of sensation and response; cognitive neuroscientists view the same systems as a solitary computer with a focus on representations and processes. The Oxford Handbook of Social Neuroscience marks the emergence of a third broad perspective in this field. Social neuroscience emphasizes the functions that emerge through the coaction and interaction of conspecifics, the neural mechanisms that underlie these functions, and the commonality and differences across social species and superorganismal structures. With an emphasis on the neural, hormonal, cellular, and genetic mechanisms underlying social behavior, social neuroscience places emphasis on the associations and influences between social and biological levels of organization. This complex interdisciplinary perspective demands theoretical, methodological, statistical, and inferential rigor to effectively integrate basic, clinical, and applied perspectives on the nervous system and brain. Reflecting the diverse perspectives that make up this field, The Oxford Handbook of Social Neuroscience brings together perspectives from across the sciences in one authoritative volume.

International Books in Print

Fundamental Neuroscience, Third Edition introduces graduate and upper-level undergraduate students to the full range of contemporary neuroscience. Addressing instructor and student feedback on the previous edition, all of the chapters are rewritten to make this book more concise and student-friendly than ever before. Each chapter is once again heavily illustrated and provides clinical boxes describing experiments, disorders, and methodological approaches and concepts. Capturing the promise and excitement of this fast-moving field, Fundamental Neuroscience, 3rd Edition is the text that students will be able to reference throughout their neuroscience careers! 30% new material including new chapters on Dendritic Development and Spine Morphogenesis, Chemical Senses, Cerebellum, Eye Movements, Circadian Timing, Sleep and Dreaming, and Consciousness. Additional text boxes describing key experiments, disorders, methods, and concepts. Multiple model system coverage beyond rats, mice, and monkeys. Extensively expanded index for easier referencing.

Current Protocols in Neuroscience

Our understanding of the neurobiological basis of psychiatric disease has accelerated in the past five years. The fourth edition of Neurobiology of Mental Illness has been completely revamped given these advances and discoveries on the neurobiologic foundations of psychiatry. Like its predecessors the book begins with an overview of the basic science. The emerging technologies in Section 2 have been extensively redone to match the progress in the field including new chapters on the applications of stem cells, optogenetics, and image guided stimulation to our understanding and treatment of psychiatric disorders. Sections 3 through 8 pertain to the major psychiatric syndromes—the psychoses, mood disorders, anxiety disorders, substance use disorders, dementias, and disorders of childhood-onset. Each of these sections includes our knowledge of their etiology, pathophysiology, and treatment. The final section discusses special topic areas including the neurobiology of sleep, resilience, social attachment, aggression, personality disorders and eating disorders. In all, there are 32 new chapters in this volume including unique insights on DSM-5, the Research Domain Criteria (RDoC) from NIMH, and a perspective on the continuing challenges of diagnosis given what we know of the brain and the mechanisms pertaining to mental illness. This book provides information from numerous levels of analysis including molecular biology and genetics, cellular physiology, neuroanatomy, neuropharmacology, epidemiology, and behavior. In doing so it translates information from the basic laboratory to the clinical laboratory and finally to clinical treatment. No other book distills the basic science and underpinnings

of mental disorders and explains the clinical significance to the scope and breadth of this classic text. The result is an excellent and cutting-edge resource for psychiatric residents, psychiatric researchers and doctoral students in neurochemistry and the neurosciences.

The Oxford Handbook of Social Neuroscience

As technology has made imaging of the brain noninvasive and inexpensive, nearly every psychologist in every subfield is using pictures of the brain to show biological connections to feelings and behavior. *Handbook of Neuroscience for the Behavioral Sciences, Volume II* provides psychologists and other behavioral scientists with a solid foundation in the increasingly critical field of neuroscience. Current and accessible, this volume provides the information they need to understand the new biological bases, research tools, and implications of brain and gene research as it relates to psychology.

Fundamental Neuroscience

This is a seminal reference work in the field of developmental behavioural neuroscience, which has emerged in recent years as an important sister discipline to developmental psychobiology. The handbook provides an introduction to recent advances in research at the intersection of developmental science and behavioural neuroscience.

Neurobiology of Mental Illness

The evolution of human language has been discussed for centuries from different perspectives. Linguistic theory has proposed grammar as a core part of human language that has to be considered in this context. Recent advances in neurosciences have allowed us to take a new neurobiological look on the similarities and dissimilarities of cognitive capacities and their neural basis across both closely and distantly related species. A couple of decades ago the comparisons were mainly drawn between human and non-human primates, investigating the cytoarchitecture of particular brain areas and their structural connectivity. Moreover, comparative studies were conducted with respect to their ability to process grammars of different complexity. So far the available data suggest that non-human primates are able to learn simple probabilistic grammars, but not hierarchically structured complex grammars. The human brain, which easily learns both grammars, differs from the non-human brain (among others) in how two language-relevant brain regions (Broca's area and superior temporal cortex) are connected structurally. Whether the more dominant dorsal pathway in humans compared to non-human primates is causally related to this behavioral difference is an issue of current debate. Ontogenetic findings suggest at least a correlation between the maturation of the dorsal pathway and the behavior to process syntactically complex structures, although a causal prove is still not available. Thus the neural basis of complex grammar processing in humans remains to be defined. More recently it has been reported that songbirds are also able to distinguish between sound sequences reflecting complex grammar. Interestingly, songbirds learn to sing by imitating adult song in a process not unlike language development in children. Moreover, the neural circuits supporting this behavior in songbirds bear anatomical and functional similarities to those in humans. In adult humans the fiber tract connecting the auditory cortex and motor cortex dorsally is known to be involved in the repetition of spoken language. This pathway is present already at birth and is taken to play a major role during language acquisition. In songbirds, detailed information exist concerning the interaction of auditory, motor and cortical-basal ganglia processing during song learning, and present a rich substrate for comparative studies. The scope of the Research Topic is to bring together contributions of researchers from different fields, who investigate grammar processing in humans, non-human primates and songbirds with the aim to find answers to the question of what constitutes the neurobiological basis of grammar learning. Open questions are: Which brain networks are relevant for grammar learning? Is there more than one dorsal pathway (one from temporal cortex to motor cortex and one to Broca's area) and if so what are their functions? Has the ability to process sequences of a given hierarchical complexity evolved in different phylogenetic lines (birds, primates, other vocal production learners such as bats)? Is the presence of a sensory-to-motor circuit in humans a precondition for development of a dorsal pathway between the temporal cortex and Broca's area? What role do subcortical structures (Basal Ganglia) play in vocal and grammar learning?

Neurobiology of human language and its evolution: Primate and Nonprimate Perspectives

Comprehensive and authoritative, *The Wiley Handbook of Evolutionary Neuroscience* unifies the diverse strands of an interdisciplinary field exploring the evolution of brains and cognition. A comprehensive reference that unifies the diverse interests and approaches associated with the neuroscientific study of brain evolution and the emergence of cognition Tackles some of the biggest questions in neuroscience including what brains are for, what factors constrain their biological development, and how they evolve and interact Provides a broad and balanced view of the subject, reviewing both vertebrate and invertebrate anatomy and emphasizing their shared origins and mechanisms Features contributions from highly respected scholars in their fields

Cingulate Neurobiology and Disease

This volume, which contains forty-six review articles from recent issues of *Current Opinion in Neurobiology*, provides easy access to the current state of theory and findings in the field.

The Cognitive Neuroscience of Social Behaviour

As technology has made imaging of the brain noninvasive and inexpensive, nearly every psychologist in every subfield is using pictures of the brain to show biological connections to feelings and behavior. *Handbook of Neuroscience for the Behavioral Sciences, Volume I* provides psychologists and other behavioral scientists with a solid foundation in the increasingly critical field of neuroscience. Current and accessible, this volume provides the information they need to understand the new biological bases, research tools, and implications of brain and gene research as it relates to psychology.

Cognitive Neuroscience

Studies in the neurobiological underpinnings of social information processing by psychologists, neurobiologists, psychiatrists, radiologists, and neurologists, using methods that range from brain imaging techniques to comparative analyses. Social neuroscience uses the methodologies and tools developed to measure mental and brain function to study social cognition, emotion, and behavior. In this collection John Cacioppo, Penny Visser, and Cynthia Pickett have brought together contributions from psychologists, neurobiologists, psychiatrists, radiologists, and neurologists that focus on the neurobiological underpinnings of social information processing, particularly the mechanisms underlying "people thinking about thinking people." In these studies such methods as functional brain imaging, studies of brain lesion patients, comparative analyses, and developmental data are brought to bear on social thinking and feeling systems—the ways in which human beings influence and are influenced by other humans. The broad range of disciplines represented by the contributors confirms that among the strengths of social neuroscience are its interdisciplinary approach and the use of multiple methods that bridge disciplines and levels of analysis.

The Wiley Handbook of Evolutionary Neuroscience

Behavioral Neuroscientists study the behavior of animals and humans and the neurobiological and physiological processes that control it. Behavior is the ultimate function of the nervous system, and the study of it is very multidisciplinary. Disorders of behavior in humans touch millions of people's lives significantly, and it is of paramount importance to understand pathological conditions such as addictions, anxiety, depression, schizophrenia, autism among others, in order to be able to develop

new treatment possibilities. Encyclopedia of Behavioral Neuroscience is the first and only multi-volume reference to comprehensively cover the foundation knowledge in the field. This three volume work is edited by world renowned behavioral neuroscientists George F. Koob, The Scripps Research Institute, Michel Le Moal, Université Bordeaux, and Richard F. Thompson, University of Southern California and written by a premier selection of the leading scientists in their respective fields. Each section is edited by a specialist in the relevant area. The important research in all areas of Behavioral Neuroscience is covered in a total of 210 chapters on topics ranging from neuroethology and learning and memory, to behavioral disorders and psychiatric diseases. The only comprehensive Encyclopedia of Behavioral Neuroscience on the market Addresses all recent advances in the field Written and edited by an international group of leading researchers, truly representative of the behavioral neuroscience community Includes many entries on the advances in our knowledge of the neurobiological basis of complex behavioral, psychiatric, and neurological disorders Richly illustrated in full color Extensively cross referenced to serve as the go-to reference for students and researchers alike The online version features full searching, navigation, and linking functionality An essential resource for libraries serving neuroscientists, psychologists, neuropharmacologists, and psychiatrists

Findings and Current Opinion in Cognitive Neuroscience

This case series book offers a practical and accessible approach to psychiatry, addressing major clinical problems ranging from psychosis to aging effects, each of which is tackled as it arises in everyday settings. With its emphasis on everyday practice strongly linked to underlying theory, the book combines clinical knowledge with the realities of managing clinical problems, and will provide a basis for developing sound analytical and confident decision-making skills. Presenting different visions of clinical psychiatry and expanding psychiatrists' interventions by integrating innovative neuroscience approaches such as neuroimaging, neuropsychology, TMS and cognitive rehabilitation, it will help clinicians and students alike gain a sound understanding of the wide range of signs and symptoms that indicate psychiatric disorders, and how the diagnosis, management and treatment options can differ from those in other medical specialties. The volume includes learning activities, with questions on each clinical case followed by detailed explanatory answers, and self-assessment exercises to assist with learning and revision. Throughout the book, tips and key features are highlighted with boxes, algorithms, tables and figures, which the reader can refer back to for exam revision and well into her/his career.

Handbook of Neuroscience for the Behavioral Sciences, Volume 1

Principles of Neurobiology presents the major concepts of neuroscience with an emphasis on how we know what we know. The text is organized around a series of key experiments to illustrate how scientific progress is made and helps upper-level undergraduate and graduate students discover the relevant primary literature. Written by a single author in

Social Neuroscience

Designed primarily as an introduction to realistic modeling methods, Computational Neuroscience: Realistic Modeling for Experimentalists focuses on methodological approaches, selecting appropriate methods, and identifying potential pitfalls. The author addresses varying levels of complexity, from molecular interactions within single neurons to the

Encyclopedia of Behavioral Neuroscience

The human brain is arguably the most complex system we know of. Over the past few decades, scientists have developed several methods and theories for studying the functional organization of the brain, and how cognitive/perceptual/emotional processes might arise from the brain's electro-chemical-computational dynamics. These methods facilitated and inspired large literatures on brain-behavior links, and yet there remains a seemingly endless chasm between our simple impoverished models and the unfathomable complexity of the human brain. The purpose of this Research Topic is to ask the question: Are we thinking about thinking about the brain in the right way? In most scientific publications, researchers describe a broad and established theoretical framework and briefly describe new experimental results consistent with that framework. Here, we encourage authors to express ideas that might be radical, controversial, or different from established theories or methodological approaches. Supportive data are highly encouraged. The aim is to spark discussions about the validity and usefulness of current methodological/theoretical approaches in human cognitive neuroscience, with the goal of inspiring new approaches and ways of thinking. Neuroscience is a massive field with

myriad methodological and theoretical approaches; we focus this Research Topic on approaches most commonly used in human neuroscience.

Clinical Cases in Psychiatry: Integrating Translational Neuroscience Approaches

This volume provides new insight into motivation theory by integrating noteworthy neuroscience research findings on motivation. This volume is dedicated to advancing our understanding of brain mechanisms of underlying motivational phenomena, including reward, approach, autonomy, intrinsic motivation, learning, effort, curiosity, and self-control.

Principles of Neurobiology

Neuroscience research in alcohol-related disorders has made remarkable progress in the last two decades. The advances are due, in great part, to the large array of powerful biomedical, bioengineering, and computational biological techniques that are now employed. To date, there has not been a comprehensive text that covers recently developed

Computational Neuroscience

This book aims to present theoretical and practical innovations in the cognitive sciences and education fields focusing on studies and research conducted with non-WEIRD (i.e., western, educated, industrialized, rich and democratic) populations, especially from Latin America. Cognitive sciences and neuroscience have increased exponentially their knowledge in the last three decades, and today there is a corpus of knowledge about our central nervous system and its functioning that (adequately understood) has promising contributions for the educational field. Most of this knowledge, however, comes from central countries (North America, Europe) and is based on studies conducted on what has been called WEIRD populations. Much less is known about how the integration of cognitive sciences and neuroscience could impact education in non-WEIRD populations, which represent the great majority of the world's population and have quite diverse cultural and social characteristics. So, the main aim of this book is to present a non-WEIRD scientific approach to problems in the cognitive sciences, neuroscience and education fields. Research presented in this contributed volume takes advantage of the diverse populations that characterize developing countries to explore how underrepresented populations learn, what works and what does not for cognitive science and education not only for the developing world, but also for understanding diversity in the whole world. Departing from this focus on diversity, chapters in this book present studies on theories, beliefs and misconceptions about the relationship between cognitive sciences and education; child and adolescent cognitive development; mathematics and language academic performance; and cognitive interventions to improve educational practice. *Cognitive Sciences and Education in Non-WEIRD Populations: A Latin American Perspective* will be a useful resource for both cognitive scientists and educational researchers interested in developing a more culturally sensitive approach to basic and applied research on cognitive sciences of education.

International Journal of Neuroscience

Psychology is of interest to academics from many fields, as well as to the thousands of academic and clinical psychologists and general public who can't help but be interested in learning more about why humans think and behave as they do. This award-winning twelve-volume reference covers every aspect of the ever-fascinating discipline of psychology and represents the most current knowledge in the field. This ten-year revision now covers discoveries based in neuroscience, clinical psychology's new interest in evidence-based practice and mindfulness, and new findings in social, developmental, and forensic psychology.

Approaches and Assumptions in Human Neuroscience

V. Methodology: E. J. Wagenmakers (Volume Editor) Topics covered include methods and models in categorization; cultural consensus theory; network models for clinical psychology; response time modeling; analyzing neural time series data; models and methods for reinforcement learning; convergent methods of memory research; theories for discriminating signal from noise; bayesian cognitive modeling; mathematical modeling in cognition and cognitive neuroscience; the stop-signal paradigm; hypothesis testing and statistical inference; model comparison in psychology; fmri; neural recordings;

open science; neural networks and neurocomputational modeling; serial versus parallel processing; methods in psychophysics.

Methods in Alcohol-Related Neuroscience Research

Landmark text focusing on the development of brain and behavior during infancy, childhood, and adolescence *Developmental Cognitive Neuroscience* provides an accessible introduction to the main methods, theories, and empirical findings of developmental cognitive neuroscience. The focus is on human development from in utero to early adulthood, but key comparative work is also included. This new edition covers research in clinical/medical populations, educational applications and major advancements in methods and analysis, in particular with increasing longitudinal research focusing on understanding the mechanisms of cognitive development. It also contains a new chapter on global and cross-cultural perspectives outlining how developmental cognitive neuroscience has been applied in different settings and how techniques can be successfully adapted. The text features a variety of student-friendly features such as chapter-end discussion, applications of basic research, and introductions to key experimental methods. An accompanying related resource website for students and educators that includes a test bank of multiple choice questions is also provided. Other sample topics covered in *Developmental Cognitive Neuroscience* include: Biology of change, methods, and populations, from gene to brain, building a brain, and vision, orienting, and attention Perceiving and acting in a world of objects, learning, and long-term memory, language, and prefrontal cortex, working memory, and decision-making Perceiving and acting in the social world, educational neuroscience, interactive specialization, and integrating development cognitive neuroscience Mid-childhood and adolescent development, social cognition and neuroimaging, and broader cognitive neuroscience approaches and theory With expansive yet accessible coverage of the subject, *Developmental Cognitive Neuroscience* is an ideal resource for upper level undergraduate and early postgraduate readers. The text will further appeal to professionals in fields that have adopted developmental cognitive neuroscience approaches, such as education, clinical psychology, pediatric medicine and global health.
