Are we hurtling towards a time when science will be so advanced that aging can be prevented or ...

Intro

Career Journey: Ramakrishnan shares his career trajectory, beginning with physics and transitioning to molecular biology, focusing on the ribosome's structure and function.

Shift to Aging: He talks about his interest in aging, which grew from his ribosome work, and his concerns about the hype and financial interests surrounding aging research.

Personal Interest in Aging: Ramakrishnan explains that personal concerns about aging partially motivated his book, aiming to demystify aging research for the general public.

Analyzing Death: He discusses why defining death is crucial to understanding aging. The ambiguity in defining the exact point of death leads to a range of ethical and social questions.

Compressed Morbidity: Ramakrishnan explains compressed morbidity, the idea of staying healthy throughout life and experiencing ailments only shortly before death. He expresses skepticism that science has yet found a way to achieve this balance.

Studying Centenarians: He discusses supercentenarians, who appear to have achieved a compressed morbidity, suggesting research into their genetics and lifestyle could provide insights into healthy aging.

Caloric Restriction: Its scientific backing compared to the more accessible concept of moderation in diet.

Evolution and Aging: Ramakrishnan explains why evolution has not resulted in humans who live longer, citing the balance between lifespan and reproductive success across species.

Views on Extreme Longevity: He shares his opinion on the prospects of dramatic life extension, siding with those who believe our current lifespan is relatively fixed without future breakthroughs.

Impact of Longevity Research: The potential benefits of longevity research are not necessarily in extending life dramatically but in alleviating the disabilities associated with old age.

Personal Takeaways and Retirement: Ramakrishnan reflects on the age-old advice for a healthy life—moderation, exercise, sleep—and his personal plans for retirement, advocating for passing resources to younger scientists.
