Intro

bolts from the transmission case cover

Once you have used a rubber hammer to remove the cover its time to start removing the gears
th gear selector fork bolt

Remove the retaining spring

Remove fifth gear fork and hub

5th gear sleeve teeth are very worn

One of the keys from the fifth gear hub is missing

Fifth gear is very worn

This, along with the worn teeth of the fifth gear sleeve and a worn input shaft bearing causes the infamous fifth gear pop out on Toyota C50 transmissions

Use a gear puller to remove the fifth gear and hub

Remove the fifth driven gear

Again use a gear puller to remove the gear

Remove the spring

In my case the shift lever lock pin and the shift lever were rusted together with the shaft and were really hard to remove

Very rusty

Lighty sand the rust so the shaft can come out easily through the other side

Remove the shaft retaining bolt

Here is the selector shaft

Remove the reverse shaft retaining bolt

Remove the detent assemblies

Use a magnet to pull out the detent assembly

Remove the shaft retaining spring

Now you can separate the case from the bellhousing

Next remove the shift forks

17:69 gear reatio
