Chapter 13 The Respiratory System Pdf

[#respiratory system anatomy physiology](#) [#chapter 13 respiratory system answers](#) [#anatomy physiology coloring workbook answers](#) [#respiratory system pdf answers](#) [#human respiratory system chapter 13 study guide](#)

Dive into the intricacies of the human respiratory system with this comprehensive PDF guide, providing complete answers for Chapter 13 of your Anatomy and Physiology Coloring Workbook. Ideal for students seeking to verify their knowledge and enhance their understanding of respiratory anatomy and physiology, this resource is a valuable study aid.

All theses are reviewed to ensure authenticity and scholarly value.

Thank you for visiting our website.

We are pleased to inform you that the document Anatomy Physiology Coloring Respiratory System you are looking for is available here.

Please feel free to download it for free and enjoy easy access.

This document is authentic and verified from the original source.

We always strive to provide reliable references for our valued visitors.

That way, you can use it without any concern about its authenticity.

We hope this document is useful for your needs.

Keep visiting our website for more helpful resources.

Thank you for your trust in our service.

This document remains one of the most requested materials in digital libraries online.

By reaching us, you have gained a rare advantage.

The full version of Anatomy Physiology Coloring Respiratory System is available here, free of charge.

Intro

A male elderly client is admitted to an acute care facility with influenza. The nurse complications. What is the most common complication of influenza? A. Septicemia B. Pneumonia

A female client has a tracheostomy but doesn't require continuous mechanical ventilation. When weaning the client from the tracheostomy tube, the nurse initially should plug the opening in the tube for

Gina, a home health nurse is visiting a home care client with advanced lung cancer. Upon assessing the client, the nurse discovers wheezing, bradycardia, and a respiratory rate of 10 breaths/minute. These signs are associated with which condition? A. Hypoxia B. Delirium C. Hyperventilation D. Semiconsciousness

Answer A. As the respiratory center in the brain becomes depressed, hypoxia occurs, producing wheezing, bradycardia, and a decreased respiratory rate. Delirium is a state of mental confusion characterized by disorientation to time and place. Hyperventilation (respiratory rate greater than that metabolically necessary for gas exchange) is marked by an increased respiratory rate or tidal volume, or both. Semiconsciousness is a characterized by limited motor and verbal responses and decreased orientation.

A female client with interstitial lung disease is prescribed prednisone (Deltasone) to control inflammation. During client teaching, the nurse stresses the importance of taking prednisone exactly as prescribed and cautions against discontinuing the drug abruptly. A client who discontinues prednisone abruptly may experience: A. hyperglycemia and glycosuria. B. acute adrenocortical insufficiency. C. GI bleeding. D. restlessness and seizures.

A male client is admitted to the health care facility for treatment of chronic obstructive pulmonary disease. Which nursing diagnosis is most important for this client? A. Activity intolerance related to fatigue B. Anxiety related to actual threat to health status C. Risk for infection related to retained secretions D. Impaired gas exchange related to airflow obstruction

A male adult client with cystic fibrosis is admitted to an acute care facility with an acute respiratory infection. Prescribed respiratory treatment includes chest physiotherapy. When should the nurse perform this procedure? A. Immediately before a meal B. At least 2 hours after a meal C. When

bronchospasms occur D. When secretions have mobilized

On arrival at the intensive care unit, a critically ill female client suffers respiratory arrest and is placed on mechanical ventilation. The physician orders pulse oximetry to monitor the client's arterial oxygen saturation (SaO₂) noninvasively. Which vital sign abnormality may alter pulse oximetry values? A. Fever B. Tachypnea C. Tachycardia D. Hypotension

The nurse is caring for a male client who recently underwent a tracheostomy. The first priority when caring for a client with a tracheostomy is: A. helping him communicate. B. keeping his airway patent. C. encouraging him to perform activities of daily living. D. preventing him from developing an infection. Answer B. Maintaining a patent airway is the most basic and critical human need. All other interventions are important to the client's well-being but not as important as having sufficient oxygen to breathe.

For a male client with chronic obstructive pulmonary disease, which nursing intervention would help maintain a patent airway? A. Restricting fluid intake to 1,000 ml/day B. Enforcing absolute bed rest C. Teaching the client how to perform controlled coughing D. Administering prescribed sedatives regularly and in large amounts

Nurse Mickey is administering a purified protein derivative (PPD) test to a homeless client. Which of the following statements concerning PPD testing is true? A. A positive reaction indicates that the client has active tuberculosis (TB). B. A positive reaction indicates that the client has been exposed to the disease. C. A negative reaction always excludes the diagnosis of TB. D. The PPD can be read within 12 hours after the injection.

Answer B. A positive reaction means the client has been exposed to TB; it isn't conclusive of the presence of active disease. A positive reaction consists of palpable swelling and induration of 5 to 15 mm. It can be read 48 to 72 hours after the injection. In clients with positive reactions, further studies are usually done to rule out active disease. In immunosuppressed clients, a negative reaction doesn't exclude the presence of active disease.

Nurse Murphy administers albuterol (Proventil), as prescribed, to a client with emphysema. Which finding indicates that the drug is producing a therapeutic effect? A. Respiratory rate of 22 breaths/minute B. Dilated and reactive pupils C. Urine output of 40 ml/hour D. Heart rate of 100 beats/minute

What is the normal pH range for arterial blood? A. 7 to 7.49 B. 7.35 to 7.45 C. 7.50 to 7.60 D. 7.55 to 7.65

Before weaning a male client from a ventilator, which assessment parameter is most important for the nurse to review? A. Fluid intake for the last 24 hours B. Baseline arterial blood gas (ABG) levels C. Prior outcomes of weaning D. Electrocardiogram (ECG) results

Which of the following would be most appropriate for a male client with an arterial blood gas (ABG) of pH 7.5, PaCO₂ 26 mm Hg, O₂ saturation 96%, HCO₃⁻ 24 mEq/L, and PaO₂ 94 mm Hg? A. Administer a prescribed decongestant. B. Instruct the client to breathe into a paper bag. C. Offer the client fluids frequently. D. Administer prescribed supplemental oxygen.

A female client is receiving supplemental oxygen. When determining the effectiveness of oxygen therapy, which arterial blood gas value is most important? A. pH B. Bicarbonate (HCO₃⁻) C. Partial pressure of arterial oxygen (PaO₂) D. Partial pressure of arterial carbon dioxide (PaCO₂)

Answer C. The most significant and direct indicator of the effectiveness of oxygen therapy is the PaO₂ value. Based on the PaO₂ value, the nurse may adjust the type of oxygen delivery (cannula, venturi mask, or mechanical ventilator), flow rate, and oxygen percentage. The other options reflect the client's ventilation status, not oxygenation.

Nurse Julia is caring for a client who has a tracheostomy and temperature of 103° F (39.4° C). Which of the following interventions will most likely lower the client's arterial blood oxygen saturation? A. Endotracheal suctioning B. Encouragement of coughing C. Use of cooling blanket D. Incentive spirometry

Nurse Eve formulates a nursing diagnosis of Activity intolerance related to inadequate oxygenation and dyspnea for a client with chronic bronchitis. To minimize this problem, the nurse instructs the client to avoid conditions that increase oxygen demands. Such conditions include: A. drinking more than 1,500 ml of fluid daily. B. being overweight. C. eating a high-protein snack at bedtime. D. eating more than three large meals a day.

A black male client with asthma seeks emergency care for acute respiratory distress. Because of this client's dark skin, the nurse should assess for cyanosis by inspecting the: A. lips. B. mucous membranes. C. nail beds. D. earlobes.

A female client with asthma is receiving a theophylline preparation to promote bronchodilation. Because of the risk of drug toxicity, the nurse must monitor the client's serum theophylline level

closely. The nurse knows that the therapeutic theophylline concentration falls within which range? A. 1 to 2 mcg/ml B. 2 to 5 mcg/ml C. 5 to 10 mcg/ml D. 10 to 20 mcg/ml

Before seeing a newly assigned female client with respiratory alkalosis, the nurse quickly reviews the client's medical history. Which condition is a predisposing factor for respiratory alkalosis? A. Myasthenia gravis B. Type 1 diabetes mellitus C. Extreme anxiety D. Narcotic overdose
Pulmonary disease (COPD), which nursing action best promotes adequate gas exchange? A. Encouraging the client to drink three glasses of fluid daily B. Keeping the client in semi-Fowler's position C. Using a high-flow Venturi mask to deliver oxygen as prescribed D. Administering a sedative as prescribed

Nurse Joana is teaching a client with emphysema how to perform pursed-lip breathing. The client asks the nurse to explain the purpose of this breathing technique. Which explanation should the nurse provide? A. It helps prevent early airway collapse. B. It increases inspiratory muscle strength C. It decreases use of accessory breathing muscles. D. It prolongs the inspiratory phase of respiration.

[Chapter 7 The Nervous System Anatomy Physiology Answers](#)

Chapter 7 Nervous System Overview recorded lecture - Chapter 7 Nervous System Overview recorded lecture by R Harvey 4,142 views 6 years ago 29 minutes - ... some more terms to add to your ever-expanding **anatomy**, and **physiology**, vocabulary. In the central **nervous system**,, if we have ...

The Nervous System, Part 1: Crash Course Anatomy & Physiology #8 - The Nervous System, Part 1: Crash Course Anatomy & Physiology #8 by CrashCourse 9,014,856 views 9 years ago 10 minutes, 36 seconds - Today Hank kicks off our look around MISSION CONTROL: the **nervous system**,. Pssst... we made flashcards to help you review ...

Introduction: Hank's Morning Routine
Nervous System Functions: Sensory Input, Integration, and Motor Output
Organization of Central and Peripheral Nervous Systems
Neurons & Glial Cells
Central Nervous System Glial Cells: Astrocytes, Microglial, Ependymal, and Oligodendrocytes
Peripheral Nervous System Glial Cells: Satellite and Schwann
Cool Neuron Facts!
Neuron Structure
Classifying Neuron Structures: Multipolar, Bipolar, and Unipolar
Classifying Neuron Functionality: Sensory (Afferent), Motor (Efferent), Interneurons (Association)

Anatomy & Physiology: Chapter 7 Practice Questions - Anatomy & Physiology: Chapter 7 Practice Questions by LearnToBetterLife 280 views 9 months ago 13 minutes, 55 seconds - Anatomy, & **Physiology**,: **Chapter 7**, Practice Questions.

Each spinal ganglion consists of a. cell bodies of motor neurons b. cell bodies of neurons that make up the major plexuses c. cell bodies of sensory neurons d. efferent fibers leaving the spinal cord nervous system is made up of the sensory receptors, the nerves that link sensory receptors with the central nervous system (CNS), and the nerves that link the CNS with effectors. a. parasympathetic b. peripheral c. sympathetic d. sensory

The optic nerve a. innervates the eyeball muscles b. is the first cranial nerve c. innervates the olfactory epithelium d. innervates the retina of the eye

Which neurons release the neurotransmitter norepinephrine? a. Preganglionic neurons of the parasympathetic system b. Postganglionic neurons of the sympathetic system c. Preganglionic neurons of the sympathetic system d. Postganglionic neurons of the parasympathetic system

A Journey Through Your Nervous System - A Journey Through Your Nervous System by BRIGHT SIDE 775,811 views 3 years ago 8 minutes, 13 seconds - Right now, a bunch of things is going on inside your body. And perhaps the most important of them is the work of your **nervous**, ...

Physiology Chapter7 Sensory_PartA - Physiology Chapter7 Sensory_PartA by Dr. Dulai 807 views 3 years ago 28 minutes - Vander's Human **Physiology**, Cell Communication_Sensory Cells.

Topics

Figure 7.1 Two Types of Sensory Receptors

Figure 7.2 Stimulation of an Afferent Neuron With a Receptor Ending

Figure 7.3 Responses of Slowly Adapting and Rapidly Adapting Receptors to a Prolonged, Constant Stimulus

Primary Sensory Coding

Stimulus Type Another term for stimulus type is stimulus modality

Figure 7.5 Action Potentials in an Afferent Fiber Leading From the Pressure Receptors of a Slowly Adapting, Single Sensory Unit Increase in Frequency as More Branches of the Afferent Neuron are Stimulated by Pressures of Increasing Magnitude

Figure 7.6 The Influence of Sensory Unit Size and Density on Acuity

Figure 7.7 Two Stimulus Points, A and B, in the Receptive Field of a Single Afferent Neuron

Lateral Inhibition Lateral inhibition enables the localization of a stimulus site for some sensory systems.

Figure 7.9 Afferent Pathways Showing Lateral Inhibition

Central Control of Afferent Information All sensory signals are subject to extensive modification before they reach higher levels of the central nervous system.

Figure 7.11 Descending Pathways May Influence Sensory Information by Directly inhibiting the Central Terminals of the Afferent Neuron or Via an Interneuron That Affects the Ascending Pathway by Inhibitory Synapses

Figure 7.12 Divergence and Convergence

Neural Pathways in Sensory Systems Afferent sensory pathways are formed by chains of three or more neurons connected by synapses that form ascending pathways to the central nervous system.

Figure 7.13 Primary Sensory Areas and Areas of Association Cortex

Figure 7.14 Two Specific Ascending Sensory Pathways and a Nonspecific Ascending Sensory Pathway

Association Cortex and Perceptual Processing The primary somatosensory cortex relies upon various cortical association areas to properly process sensory information.

Factors that Affect Perception

Table 7.1 Summary of General Principles of Sensory Stimulus Processing

Somatic Sensation Sensation from the skin, skeletal muscles, bones, tendons, and joints - somatic sensation - is initiated by a variety of sensory receptors collectively called somatic receptors.

Figure 7.15 Skin Receptors, One Class of Somatic Receptors

Figure 7.16 Cellular Pathways of Pain Transmission

Figure 7.17 Convergence of Visceral and Somatic Afferent Neurons onto Ascending Pathways Produces the phenomenon of Referred Pain

Pain Referred pain is the sensation of pain that is experienced at a site other than the injured or diseased tissue.

Itch Evidence is accumulating that itch is a somatic sensation with

Figure 7.20 The Anterolateral System and the Dorsal Column System

Figure 7.21 The Location of Pathway Terminations for Different Parts of the Body in Somatosensory Cortex

Intro

What are the cells that are part of your immune system and help fight infections called?

Approximately how many litres of blood are there in an adult human?

What percent of your body is made of water?

Which organ removes excess water and salts from the body?

Which of these is not a part of the spine anatomy?

What is the more common name for your scapula?

What is the correct name for a kneecap?

Which of these is not a part of the brain?

Which of these is not part of your blood?

The build up of which acid causes gout?

Which blood cells distribute oxygen throughout the body?

On average how many taste buds are on our tongues?

What type of acid is in your stomach?

A pulmonary embolism is a blood clot that has become lodged in an artery in which part of the body?

What do stem cells do in the body?

The clear fluid that drains from cells and tissues is called what?

What does the ureter connect the kidneys to?

Which of these is not a function of the spleen?

How many chambers are in your heart?

What is the longest bone in the body called?

How many teeth do adults normally have?

Where are your photoreceptor cells located?

What is the scientific name for the voice box?

Which layer of skin contains the fat cells?

The protein fibrin is a major component of what?

What is the sac that surrounds your heart called?

Which muscle is responsible for inflating your lungs?

What is the body's only disposable organ?

Where are blood cells produced?

Which organ controls blood sugar levels?

Where are your talus bones located?

Which of these is not a place that stones can form in a body?

How many pairs of chromosomes do humans have?

What is it called when an injury causes blood to collect outside of blood vessels?

What is low blood pressure called?

A blockage in an artery caused by a blood clot is called what?

Where is bile made?

What's the most commonly broken bone?

Hair is made up of 95% of which protein?

What connects arteries to veins?
