Total energy is kinetic plus potential

Gasoline has chemical potential energy

Thermodynamic Systems Thermal Energy

Kinetic energy of car converted to thermal energy from friction of the brakes

Entropy is a measure of "disorder," or the information required to describe microstates

2nd law of thermodynamics: Entropy of an isolated system can never decrease

Gasoline more useful for work than heat from exhaust

Exhaust will not rearrange itself to become gasoline

but gasoline can be converted to heat and exhaust

One way flow of entropy appears to be the only reason there is a forward flow of time

Electromagnetism: Study of interaction between electrically charged particles

Moving charges create magnetic fields

Moving magnetic field affects charges

Magnets always have two poles

approach this conducting wire with a bar magnet

approach this conducting loop with the bar magnet

produced a magnetic field

attach a flat surface

apply the right-hand corkscrew

using the right-hand corkscrew

attach an open surface to that closed loop

calculate the magnetic flux

build up this magnetic field

confined to the inner portion of the solenoid

change the shape of this outer loop
