[#global warming](#) [#climate change](#) [#earth's temperature rise](#) [#environmental crisis](#) [#greenhouse effect](#)

The Great Warming describes the undeniable and accelerated increase in Earth's average surface temperature, a pivotal environmental crisis primarily driven by human activities like the emission of greenhouse gases. This profound climate change phenomenon leads to widespread impacts, from melting glaciers and rising sea levels to more frequent extreme weather events, necessitating urgent global action and a deeper understanding of its long-term consequences.
