Surgical Technology for the Surgical Technologist

This new edition meets the requirements of the revised Core Curriculum for Surgical Technologists, 5th edition. It is written by surgical technologists for surgical technologists. The content focuses on the concepts and skill development (cognitive and procedural) required of surgical technologists in the operative environment. The text uses the A POSitive CARE approach to surgical problem solving that concentrates on the ability of the surgical technologist to predict the patient's and surgeon's needs through the intraoperative period. The goal is for the surgical technologist to apply this model in daily practice for maximum efficiency and effectiveness during the surgical procedure. The surgical procedures included in the text were selected for their instructive value and because the skills demonstrated can be applied to many other procedures.

Learner-Centered Theory and Practice in Distance Education: Cases From Higher Education brings the voice of the learning sciences to the study and design of distance learning. The contributors examine critical issues in the design of theoretically and pedagogically based distance education programs. Eight distance education programs are described in enough detail to allow readers with different interests to understand the pedagogical approaches and the implications of implementing those approaches. Issues of theory, pedagogy, design, assessment, communities of practice, collaboration, and faculty development are discussed. Each section of the book includes: *a primary chapter written by an

author or authors involved with a distance education program that reflects learner-centered principles; *a formal reaction to the chapter by a specialist from the learning sciences, educational evaluation and policy, administration, or the corporate sector with expertise in issues of distance learning; and *an edited transcript of the authors' discussion of the primary chapter held at a symposium at the Asilomar Conference Center. A final "summing up" section offers two perspectives--from leading scholars outside the fields of instructional design, evaluation, and the learning sciences--on the approaches and thinking reflected in the rest of the book. This book is essential for researchers, as well as all those engaged in delivering, supporting, or administrating distance education programs at the post-secondary level. The descriptions, strategies, and principles will inform the design of continuing education, as well as degree-based education and corporate education and training, and distance education programs for adults.

Explore ways to bring and keep your library's electronic services up to date! From editor Di Su: "Some years ago, if you were told that a library's catalog would be available on a 24/7/365 basis, you'd think it was just another fiction. Perhaps as influential as Johannes Gutenberg's invention of movable type printing, the Internet is one of the most significant happenings in the information world in modern times." In addition to showing you how library services have been influenced and enhanced by the advent of the Internet, *Evolution in Reference and Information Services: The Impact of the Internet* will enable you to make the most of the new opportunities that current technologies offer. This valuable book will also help you and your library avoid the pitfalls and new challenges to professional competency that come along with electronic research. *Evolution in Reference and Information Services* gives you a review of the history of electronic reference looks at the increasing role of librarians as teachers and providers of technical help for users provides case studies and ways to evaluate electronic research methods suggests strategies for providing effective electronic services examines government Web sites explores Internet sources of health information shows you how to establish electronic services through your library's portal site looks at how to manage a library computer lab and much more!

College Handbook 2011

Technical communication instructors need professional development opportunities that will aid them in creating their online courses; in developing curricula; and in teaching in what may be a new environment. Although instructors can turn to instructional design teams for assistance in using Learning Management System and its functions, they specifically need their own first-hand, immersive learning within their pedagogical training. In other words, teachers need to learn in an online context like the environment that their students will use; such direct training helps instructors to facilitate student learning in a technologically distributed classroom. Beyond learning technological skills to facilitate a course, these teachers need to learn to use the technology effectively to keep students on track and to teach them skills and material. This collection—which includes three contributions from 2007 and 10 from 2017—focuses on the types of professional development instructors need to be successful in the online technical communication classroom. Formed as a 10-year retrospective of the field and its advances in online education professional development, the book offers instructors theoretical and practical suggestions for creating and teaching successful online courses and managing entire online technical communication programs. This book was originally published as a special issue of Technical Communication Quarterly (TCQ).
