An Introduction to Research in Counselling and Psychotherapy

Introducing the basic principles of research theory and practice, this book is the ideal starter text for any counselling trainee or practitioner learning about the research process for the first time. Structured around common training topics, the book: - Explains why you need to do research at all: what it is, why it's important and its historical and philosophical context - Guides you through the confusing mass of research literature - Covers the ins and outs of actually doing research: practical and ethical issues - Helps you get the most out of research - how to evaluate the outcomes and use research to investigate the process of therapy. Written in a language familiar to first-year trainees and using a range of features to enhance learning, this accessible introduction will equip both trainees and qualified therapists with the essential nuts and bolts to understand research. John McLeod is Emeritus Professor of Counselling at the University of Abertay Dundee and adjunct Professor at the University of Oslo, Norway.

Research Methods in Clinical and Counselling Psychology

Research Methods in Clinical and Counselling Psychology presents a practical description of the research process, taking readers sequentially through the basic steps of a project: groundwork, measurement, design, analysis and interpretation. It also addresses essential background issues, such as the underlying philosophy of the various research methods and the socio-political issues that arise in doing research in service settings. Clinical and counselling research methodology is currently developing rapidly, and psychologists are expanding their repertoire of methods. In this book the authors present a balanced appraisal of both traditional and emergent methods. They re-affirm the scientist-practitioner model: that clinical and counselling psychologists have a dual role as both clinicians and researchers. The authors argue that research embraces a broad range of activities which can be incorporated into everyday professional practice. The book is aimed at students and professionals who want to conduct their own research and those who simply want to understand published research better.

Qualitative Research in Counselling and Psychotherapy

A new book by John McLeod is always a treat and, like good qualitative research, takes the reader by surprise, and shows him or her something new. The revelation to me in this book is its focus on philosophy (rather than psychology) and on John's insistence that qualitative research is rooted in a mixture of phenomenology and hermeneutics. Those of us engaged in qualitative research are challenged to underpin our work with a deeper awareness of relevant philosophy with Chapters 2, 3 and 4 offering a good starting point. This book might not be seen then as being for the novice researcher who, in any case, would be best advised to start with one of John's earlier books: *Doing Counselling Research* (SAGE,1994) or *Practitioner Research in Counselling* (SAGE,1999). However, many parts of this book are essential reading for those beginning qualitative research. The first half of Chapter 9, for example, 'How to Do Qualitative Research?' is rich material, as is Chapter 6, which explores grounded theory, referred to by John as the 2market leader2 in qualitative research. Chapter 10 takes a critical stance on randomized controlled trials before arguing the case for using qualitative outcomes measures: "Qualitative interviews appear to be, at present, the most sensitive method for the evaluation of the harmful effects of therapy and also for recording its greatest successes. The standardized self-report methods used in randomized trials appear both to inhibit criticism of therapists and reporting of deterioration and also give little scope for clients to describe the hugely positive transformational experiences that can sometimes take place in counselling". This book deeply addresses what it means to do qualitative research into counselling and psychotherapy with plenty for the novice researcher and even more for those already deeply immersed in qualitative research' - William West, *Counselling and Psychotherapy Research*

Qualitative methods are particularly suited to answering the kinds of questions that counsellors and psychotherapists need to ask about their practice. *Qualitative Research in Counselling and Psychotherapy* has therefore been written to help researchers find their way through the range of methodologies and techniques available to them. Leading expert, and bestselling author John McLeod takes the reader through each stage of the research process, explaining techniques for gathering data, writing up the study and evaluating the findings. Each qualitative method is clearly described and critically assessed in terms of its own strengths and weaknesses. Examples from actual research studies are given to show how the methods work in practice. The need to show how and why counselling works has led to an explosion of research activity. For all those involved in research - whether as part of academic study or in practice this book will be essential reading. As an introduction to qualitative methods, this it is certain to be widely recommended on courses in counselling and counselling psychology and will also be of interest to those who provide counselling in other professional areas such as nursing and social work.

RESEARCH IN REHABILITATION COUNSELING provides the basics that one would need to begin conducting a research investigation. It was written as a primary text for graduate level students and practitioners concerning the role of research in contemporary rehabilitation counseling. It is the authors' intent to provide a comprehensive overview of the philosophical, ethical, methodological, and analytic fundamentals of social science research, as well as to specify aspects of rehabilitation research that distinguish it from scientific inquiry in other helping professions. It has been thoroughly revised to accurately reflect the variation and wealth of research methodologies used in contemporary rehabilitation counseling research—more than 300 new references have been added. Most of the research examples cited were published in peer-reviewed rehabilitation counseling journals over the past decade, and these examples represent the current status of research methods as well as the most relevant contemporary topic areas of research and scholarship in the field. Accordingly, it may be used both as a research textbook and as a general introduction to the current scholarship. Because this book was written as an introductory research methods textbook for graduate students in rehabilitation counseling, the authors focus much of the information contained herein on the role of readers as professional consumers of rehabilitation research. It will prove to be an invaluable resource for counselors, administrators, policymakers, educators, researchers, people with disabilities, and consumer advocates.

Case Study Research in Counselling and Psychotherapy

This textbook provides a guide to the development of a rigorous and creative research-supported practice for students, practitioners, and researchers in counselling and psychotherapy. With an emphasis on critical thinking and "research mindedness", it introduces practical research skills and links them to self-awareness and critical reflection. With examples ranging from private therapeutic practice to psychiatric related research, each chapter combines 'how-to-do-it' advice with illustrative real-life examples. The authors outline the use of a broad range of research methods, embracing Arts- as well as RCT-based research, and covering qualitative, quantitative, pluralistic and mixed methods approaches. Whether you are engaging with research for the first time or already developing your own research projects, if you are a student at diploma level or taking a Postgraduate research course for counsellors, psychotherapists and counselling psychotherapists, this is essential reading for anyone looking for a book that combines self-awareness with analytical and practical skills.
