Parsing Techniques

This second edition of Grune and Jacobs' brilliant work presents new developments and discoveries that have been made in the field. Parsing, also referred to as syntax analysis, has been and continues to be an essential part of computer science and linguistics. Parsing techniques have grown considerably in importance, both in computer science, ie. advanced compilers often use general CF parsers, and computational linguistics where such parsers are the only option. They are used in a variety of software products including Web browsers, interpreters in computer devices, and data compression programs; and they are used extensively in linguistics.

Engineering a Compiler

This entirely revised second edition of Engineering a Compiler is full of technical updates and new material covering the latest developments in compiler technology. In this comprehensive text you will learn important techniques for constructing a modern compiler. Leading educators and researchers Keith Cooper and Linda Torczon combine basic principles with pragmatic insights from their experience building state-of-the-art compilers. They will help you fully understand important techniques such as compilation of imperative and object-oriented languages, construction of static single assignment forms, instruction scheduling, and graph-coloring register allocation. In-depth treatment of algorithms and techniques used in the front end of a modern compiler Focus on code optimization and code generation, the primary areas of recent research and development Improvements in presentation including conceptual overviews for each chapter, summaries and review questions for sections, and prominent placement of definitions for new terms Examples drawn from several different programming languages

Modern Compiler Design

"Modern Compiler Design" makes the topic of compiler design more accessible by focusing on principles and techniques of wide application. By carefully distinguishing between the essential (material that has a high chance of being useful) and the incidental (material that will be of benefit only in exceptional cases) much useful information was packed in this comprehensive volume. The student

who has finished this book can expect to understand the workings of and add to a language processor for each of the modern paradigms, and be able to read the literature on how to proceed. The first provides a firm basis, the second potential for growth.

Compiler Construction

This book constitutes the proceedings of the 24th International Conference on Compiler Construction, CC 2015, held as part of the European Joint Conferences on Theory and Practice of Software, ETAPS 2015, in London, UK, in April 2015. The 11 papers presented in this volume were carefully reviewed and selected from 34 submissions. They deal with compiler engineering and compiling techniques; compiler analysis and optimisation and formal techniques in compilers. The book also contains one invited talk in full-paper length.

Automated Data Collection with R

A hands on guide to web scraping and text mining for both beginners and experienced users of R Introduces fundamental concepts of the main architecture of the web and databases and covers HTTP, HTML, XML, JSON, SQL. Provides basic techniques to query web documents and data sets (XPath and regular expressions). An extensive set of exercises are presented to guide the reader through each technique. Explores both supervised and unsupervised techniques as well as advanced techniques such as data scraping and text management. Case studies are featured throughout along with examples for each technique presented. R code and solutions to exercises featured in the book are provided on a supporting website.

The Definitive ANTLR 4 Reference

Programmers run into parsing problems all the time. Whether it's a data format like JSON, a network protocol like SMTP, a server configuration file for Apache, a PostScript/PDF file, or a simple spreadsheet macro language--ANTLR v4 and this book will demystify the process. ANTLR v4 has been rewritten from scratch to make it easier than ever to build parsers and the language applications built on top. This completely rewritten new edition of the bestselling Definitive ANTLR Reference shows you how to take advantage of these new features. Build your own languages with ANTLR v4, using ANTLR's new advanced parsing technology. In this book, you'll learn how ANTLR automatically builds a data structure representing the input (parse tree) and generates code that can walk the tree (visitor). You can use that combination to implement data readers, language interpreters, and translators. You'll start by learning how to identify grammar patterns in language reference manuals and then slowly start building increasingly complex grammars. Next, you'll build applications based upon those grammars by walking the automatically generated parse trees. Then you'll tackle some nasty language problems by parsing files containing more than one language (such as XML, Java, and Javadoc). You'll also see how to take absolute control over parsing by embedding Java actions into the grammar. You'll learn directly from well-known parsing expert Terence Parr, the ANTLR creator and project lead. You'll master ANTLR grammar construction and learn how to build language tools using the built-in parse tree visitor mechanism. The book teaches using real-world examples and shows you how to use ANTLR to build such things as a data file reader, a JSON to XML translator, an R parser, and a Java class->interface extractor. Doing Dialectical Behavior Therapy

Filled with vivid clinical vignettes and step-by-step descriptions, this book demonstrates the nuts and bolts of dialectical behavior therapy (DBT). DBT is expressly designed for--and shown to be effective with--clients with serious, multiple problems and a history of treatment failure. The book provides an accessible introduction to DBT while enabling therapists of any orientation to integrate elements of this evidence-based approach into their work with emotionally dysregulated clients. Experienced DBT clinician and trainer Kelly Koerner clearly explains how to formulate individual cases; prioritize treat-

ment goals; and implement a skillfully orchestrated blend of behavioral change strategies, validation strategies, and dialectical strategies. See also *Dialectical Behavior Therapy in Clinical Practice, Second Edition: Applications across Disorders and Settings*, edited by Linda A. Dimeff, Shireen L. Rizvi, and Kelly Koerner, which presents exemplary DBT programs for specific clinical problems and populations.

Humanities Data Analysis

A practical guide to data-intensive humanities research using the Python programming language The use of quantitative methods in the humanities and related social sciences has increased considerably in recent years, allowing researchers to discover patterns in a vast range of source materials. Despite this growth, there are few resources addressed to students and scholars who wish to take advantage of these powerful tools. *Humanities Data Analysis* offers the first intermediate-level guide to quantitative data analysis for humanities students and scholars using the Python programming language. This practical textbook, which assumes a basic knowledge of Python, teaches readers the necessary skills for conducting humanities research in the rapidly developing digital environment. The book begins with an overview of the place of data science in the humanities, and proceeds to cover data carpentry: the essential techniques for gathering, cleaning, representing, and transforming textual and tabular data. Then, drawing from real-world, publicly available data sets that cover a variety of scholarly domains, the book delves into detailed case studies. Focusing on textual data analysis, the authors explore such diverse topics as network analysis, genre theory, onomastics, literacy, author attribution, mapping, stylometry, topic modeling, and time series analysis. Exercises and resources for further reading are provided at the end of each chapter. An ideal resource for humanities students and scholars aiming to take their Python skills to the next level, *Humanities Data Analysis* illustrates the benefits that quantitative methods can bring to complex research questions. Appropriate for advanced undergraduates, graduate students, and scholars with a basic knowledge of Python Applicable to many humanities disciplines, including history, literature, and sociology Offers real-world case studies using publicly available data sets Provides exercises at the end of each chapter for students to test acquired skills Emphasizes visual storytelling via data visualizations

A Practical Approach to Compiler Construction

This book provides a practically-oriented introduction to high-level programming language implementation. It demystifies what goes on within a compiler and stimulates the reader's interest in compiler design, an essential aspect of computer science. Programming language analysis and translation techniques are used in many software application areas. *A Practical Approach to Compiler Construction* covers the fundamental principles of the subject in an accessible way. It presents the necessary background theory and shows how it can be applied to implement complete compilers. A step-by-step approach, based on a standard compiler structure is adopted, presenting up-to-date techniques and examples. Strategies and designs are described in detail to guide the reader in implementing a translator for a programming language. A simple high-level language, loosely based on C, is used to illustrate aspects of the compilation process. Code examples in C are included, together with discussion and illustration of how this code can be extended to cover the compilation of more complex languages. Examples are also given of the use of the flex and bison compiler construction tools. Lexical and syntax analysis is covered in detail together with a comprehensive coverage of semantic analysis, intermediate representations, optimisation and code generation. Introductory material on parallelisation is also included. Designed for personal study as well as for use in introductory undergraduate and postgraduate courses in compiler design, the author assumes that readers have a reasonable competence in programming in any high-level language.

The Think Aloud Method

This book presents a detailed description of the Think Aloud Method, which was developed to facilitate knowledge acquisition and problem-solving by asking the participant to think aloud while solving a problem. The Think Aloud Method is based on the premise that people are often able to verbalize their thoughts as they solve a problem, and their resulting behavior can be analyzed to answer questions about problem solving behavior. This method is useful for psychological research on problem solving behavior, as well as for knowledge acquisition in the context of building expert computer programs.

In many cases the Think Aloud Method is an invaluable source of information for psychologists and knowledge engineers. The Think Aloud Method is intended for two types of readers: social scientists who want to use the Think Aloud Method for research on cognitive processes, and knowledge engineers who wish to use the method for knowledge acquisition. The book is made accessible to both audiences with short introductions to several issues that are basic knowledge for one readership, but that are not part of the standard knowledge of their community. Introductory sections on those topics relevant to both communities are also included. The Think Aloud Method will prove a welcome addition to work in this exciting area.

A Practical Guide to Sentiment Analysis

Sentiment analysis research has been started long back and recently it is one of the demanding research topics. Research activities on Sentiment Analysis in natural language texts and other media are gaining ground with full swing. But, till date, no concise set of factors has been yet defined that

really affects how writers' sentiment i.e., broadly human sentiment is expressed, perceived, recognized, processed, and interpreted in natural languages. The existing reported solutions or the available systems are still far from perfect or fail to meet the satisfaction level of the end users. The reasons may be that there are dozens of conceptual rules that govern sentiment and even there are possibly unlimited clues that can convey these concepts from realization to practical implementation. Therefore, the main aim of this book is to provide a feasible research platform to our ambitious researchers towards developing the practical solutions that will be indeed beneficial for our society, business and future researches as well.

Modern Compiler Implementation in ML

This new, expanded textbook describes all phases of a modern compiler: lexical analysis, parsing, abstract syntax, semantic actions, intermediate representations, instruction selection via tree matching, dataflow analysis, graph-coloring register allocation, and runtime systems. It includes good coverage of current techniques in code generation and register allocation, as well as functional and object-oriented languages, that are missing from most books. In addition, more advanced chapters are now included so that it can be used as the basis for two-semester or graduate course. The most accepted and successful techniques are described in a concise way, rather than as an exhaustive catalog of every possible variant. Detailed descriptions of the interfaces between modules of a compiler are illustrated with actual C header files. The first part of the book, Fundamentals of Compilation, is suitable for a one-semester first course in compiler design. The second part, Advanced Topics, which includes the advanced chapters, covers the compilation of object-oriented and functional languages, garbage collection, loop optimizations, SSA form, loop scheduling, and optimization for cache-memory hierarchies.

Introduction to Compilers and Language Design

A compiler translates a program written in a high level language into a program written in a lower level language. For students of computer science, building a compiler from scratch is a rite of passage: a challenging and fun project that offers insight into many different aspects of computer science, some deeply theoretical, and others highly practical. This book offers a one semester introduction into compiler construction, enabling the reader to build a simple compiler that accepts a C-like language and translates it into working X86 or ARM assembly language. It is most suitable for undergraduate students who have some experience programming in C, and have taken courses in data structures and computer architecture.

Natural Language Processing and Knowledge Representation

"Traditionally, knowledge representation and reasoning systems have incorporated natural language as interfaces to expert systems or knowledge bases that performed tasks separate from natural language processing. As this book shows, however, the computational nature of representation and inference in natural language makes it the ideal model for all tasks in an intelligent computer system. Natural language processing combines the qualitative characteristics of human knowledge processing with a computer's quantitative advantages, allowing for in-depth, systematic processing of vast amounts of information.

Flex & Bison

Implementing a programming language means bridging the gap from the programmer's high-level thinking to the machine's zeros and ones. If this is done in an efficient and reliable way, programmers can concentrate on the actual problems they have to solve, rather than on the details of machines. But understanding the whole chain from languages to machines is still an essential part of the training of any serious programmer. It will result in a more competent programmer, who will moreover be able to develop new languages. A new language is often the best way to solve a problem, and less difficult than it may sound. This book follows a theory-based practical approach, where theoretical models serve as blueprint for actual coding. The reader is guided to build compilers and interpreters in a well-understood and scalable way. The solutions are moreover portable to different implementation languages. Much of the actual code is automatically generated from a grammar of the language, by using the BNF Converter tool. The rest can be written in Haskell or Java, for which the book gives detailed guidance, but with some adaptation also in C, C++, C#, or OCaml, which are supported by the BNF Converter. The main focus of the book is on standard imperative and functional languages: a subset of C++ and a subset of Haskell are the source languages, and Java Virtual Machine is the main target. Simple Intel x86 native code compilation is shown to complete the chain from language to machine. The last chapter leaves the standard paths and explores the space of language design ranging from minimal Turing-complete languages to human-computer interaction in natural language.

Implementing Programming Languages

A refreshing antidote to heavy theoretical tomes, this book is a concise, practical guide to modern compiler design and construction by an acknowledged master. Readers are taken step-by-step through each stage of compiler design, using the simple yet powerful method of recursive descent to create a compiler for Oberon-0, a subset of the author's Oberon language. A disk provided with the book gives full listings of the Oberon-0 compiler and associated tools. The hands-on, pragmatic approach makes the book equally attractive for project-oriented courses in compiler design and for software engineers wishing to develop their skills in system software.

Spanish Sentence Builders is a workbook aimed at beginner to pre-intermediate students co-authored by two modern languages educators with over 40 years of extensive classroom experience between the two, both in the UK and internationally. This 'no-frills' book contains 19 units of work on very popular themes, jam-packed with graded vocabulary-building, reading, translation, retrieval practice and writing activities. Key vocabulary, lexical patterns and structures are recycled and interleaved throughout. Each unit includes: 1) A sentence builder modelling the target constructions; 2) A set of vocabulary building activities; 3) A set of narrow reading texts exploited through a range of tasks focusing on both the meaning and structural levels of the text; 4) A set of retrieval-practice translation tasks; 5) A set of writing tasks targeting essential micro-skills such as spelling, lexical retrieval, syntax, editing and communication of meaning. Based on the Extensive Processing Instruction (E.P.I.) principle that learners learn best from comprehensible and highly patterned input flooded with the target linguistic features, the authors have carefully designed each and every text and activity to enable the student to process and produce each item many times over. This occurs throughout each unit of work as well as in smaller grammar, vocabulary and question-skills micro-units located at regular intervals in the book, which aim at reinforcing the understanding and retention of the target grammar, vocabulary and question patterns.

The skills and tools for collecting, verifying and correlating information from different types of systems is an essential skill when tracking down hackers. This book explores Open Source Intelligence Gathering (OSINT) inside out from multiple perspectives, including those of hackers and seasoned intelligence experts. OSINT refers to the techniques and tools required to harvest publicly available data concerning a person or an organization. With several years of experience of tracking hackers with OSINT, the author whips up a classical plot-line involving a hunt for a threat actor. While taking the audience through the thrilling investigative drama, the author immerses the audience with in-depth knowledge of state-of-the-art OSINT tools and techniques. Technical users will want a basic understanding of the Linux command line in order to follow the examples. But a person with no Linux or programming experience can still gain a lot from this book through the commentaries. This book's unique digital investigation proposition is a combination of story-telling, tutorials, and case studies. The book explores digital investigation from multiple angles: Through the eyes of the author who has several years of experience in the subject. Through the mind of the hacker who collects massive amounts of data from multiple online sources to identify targets as well as ways to hit the targets. Through the eyes of industry leaders. This book is ideal for: Investigation professionals, forensic analysts, and CISO/CIO and other executives wanting to understand the mindset of a hacker and how seemingly harmless information can be used to target their organization. Security analysts, forensic investigators, and SOC teams looking for new approaches on digital investigations from the perspective of collecting and parsing publicly available information. CISOs and defense teams will find this book useful because it takes the perspective of infiltrating an organization from the mindset of a hacker. The commentary provided by outside experts will also provide them with ideas to further protect their organization's data.

Negotiating in the Technocracy

Have you ever felt taken advantage of regarding a technology deal? Or overspent on a purchase; or underprice a sale? Or maybe you are one of us, sometimes overwhelmed by technological change and terms that cause anxiety and seem to control our lives more and more? This book puts you back in control of technology and your technological life the easy way. Dispelling mystery and providing a step by step approach on what to look for when you are negotiating a technology or intellectual property in your life or business, you will learn how simple transactions can be if you know what to look for and what goals you need to set. Entertaining stories and functional survival guide tips for those in the information economy are included, such as simple checklists for those seeking goods and services in our technocracy. The idea for this book came about in the early 20th century where a group of thinkers fancied the day when a "technocracy" would assist humans in avoiding bad decisions, like war. This would be brought about by the use of automation. While that never came to pass as quickly as envisioned, humans are still part of the equation in shaping how these technologies do work for us. The trajectory of successful technology is shaped at the negotiation phase. Using a unique systems-based approach of his design, Martin F. Medeiros demonstrates how technology is able to be negotiated at any level, from the largest companies, governments and retailers to individuals and the smallest of start-ups. This guide shows the real utility of technology and emphasizes that it is approachable, manageable, and that businesses and individuals should never think of technology as magic, or requiring special skills. The idea that we need to be technologists or "techno geeks" to understand technology is losing its grip as the dominant theme in popular culture. "Negotiating in the Technocracy" shows exactly how this is happening by disaggregating complex deals. Negotiating in the Technocracy has detailed approaches to help readers know what they are agreeing to when they click "Term of Service" on a website, sign a lease with an equipment manufacturer, or hire a web developer (for example, you may not often own what you pay for when you hire that web developer). The book is broken up into three sections; the first is how we view technology, and how we should view it; the second section involves how licensing of technology is part of our lives in the technocracy; the third part includes checklists on how to go through eleven transactions and negotiate them successfully, or at least, know what you are committing to when you buy or sell technology. It also includes explanations on what the "boilerplate" terms mean and how they function in a contract. Having started what would become the Negotiation Strategist Research (www.negotiationstrategist.com) project while working as a legal intern at American Airlines in 1993, Martin amassed more than 20 years of experience and data, seen in his numerous articles, two books, and hours of negotiation video. In addition to his extensive authorship credits, Martin has instructed negotiators in a myriad of settings, including Portland State University, Lewis & Clark Law School, Oregon Health and Sciences University, Fortune 500 and Am Law 100 firms. He presently serves on the Board of Oregon Law Institute at Lewis & Clark Law School and advises politicians and executives on optimizing negotiation performance. In addition to practicing law at the Medeiros Law Group, he currently leads a group of consultants and researches contemporary negotiation techniques at NSR. Updates are provided @negotiationSR. Prior to starting his law firm he worked at K&L Gates (Preston Gates Ellis LLP) where was part of the Business, Intellectual Property, and Cross Border practices. Martin is licensed to practice law in Oregon and Washington and is admitted to practice before the US District Court for the District of Oregon.

The Technocratic Challenge to Democracy

This book represents the first comprehensive study of how technocracy currently challenges representative democracy and asks how technocratic politics undermines democratic legitimacy. How strong

is its challenge to democratic institutions? The book offers a solid theory and conceptualization of technocratic politics and the technocratic challenge is analyzed empirically at all levels of the national and supra-national institutions and actors, such as cabinets, parties, the EU, independent bodies, central banks and direct democratic campaigns in a comparative and policy perspective. It takes an in-depth analysis addressing elitism, meritocracy, de-politicization, efficiency, neutrality, reliance on science and distrust toward party politics and ideologies, and their impact when pitched against democratic responsiveness, accountability, citizens' input and pluralist competition. In the current crisis of democracy, this book assesses the effects of the technocratic critique against representative institutions, which are perceived to be unable to deal with complex and global problems. It analyzes demands for competent and responsible policy making in combination with the simultaneous populist resistance to experts. The book will be of key interest to scholars and students of comparative politics, political theory, policy analysis, multi-level governance as well as practitioners working in bureaucracies, media, think-tanks and policy making.

Technocracy Vs. Democracy

This text focuses on the potential conflict between the emancipatory function of communicative politics and the control effects that derive from communications, and discusses its relationship to the politics of liberation, democracy and market economy.

Planning and Knowledge

This book uses an international perspective and draws on a wide range of new conceptual and empirical material to examine the sources of conflict and cooperation within the different landscapes of knowledge that are driving contemporary urban change. Based on the premise that historically established systems of regulation and control are being subject to unprecedented pressures, scholars critically reflect on the changing role of planning and governance in sustainable urban development, looking at how a shift in power relations between expert and local cultures in western planning processes has blurred the traditional boundaries between public, private and voluntary sectors.

Negotiating Trade Liberalization in Argentina and Chile

How do international negotiations affect domestic politics? Starting in the 1990s, countries throughout Latin America embarked on many and simultaneous negotiations. On the shifting ground of widening and deepening trade agendas and diverse arenas, what factors determined trade politics? This book examines the domestic political dynamics triggered by South-South, North-South and multilateral agendas in Argentina and Chile between 1990 and 2005. Using a much-needed cross-negotiation and cross-country comparative perspectives, and through detailed empirical analyses of several key negotiations, it proposes an explanation that emphasizes the interplay between international negotiations and domestic trade politics, taken as the result of the complex and dynamic interdependencies and interrelations between state and society. Informed by interviews with public officials, businesses and civil society, the analysis reveals that variation in the depth of agendas, the distributional effects and the uncertainty of political outcomes all have important consequences for domestic preference formation, collective action strategies and types of relationships. Given this, the variety of negotiations, when considered separately and comparatively, show that South-South, North-South and multilateral processes promote different patterns of trade politics. In sum, although national specificities and historical legacies are important, the book argues that trade policy comes first in creating domestic politics in Latin America.

Can Markets Solve Problems?

A provocative analysis of market-based interventions into public problems and the consequences. Market-based interventions have been used in attempts to solve numerous public problems, from education to healthcare and from climate change to privacy. Scholars have responded persuasively through critiques of neoliberalism. In *Can Markets Solve Problems?* Daniel Neyland, Véra Ehrenstein, and Sveta Milyaeva propose a different route forward. There is no single entity knowable as "the market," the authors argue. Instead, they examine in detail the devices, relations, and practices that underpin these market-based interventions. Drawing on recent work in science and technology studies (STS), each chapter focuses on a different intervention and critically explores the market sensibility around which it is organized. Trade and exchange, competition, property and ownership, and investment and return all become the focus of a thorough exploration of what it means to intervene

in public problems, how problems are composed, and how solutions are continually reworked. Can Markets Solve Problems? offers the first book-length STS enquiry into markets and public problems. Weaving together rich empirical descriptions and conceptual discussions, the book provides in-depth insights into the workings of these markets, their continuous evolution, and the consequences. The result is a new avenue of critical inquiry that moves between the details of specific policies and the always-emerging, collective features of this landscape of intervention.

Rolling Transition and the Role of Intellectuals

Utilizing a new and original framework for examining the role of intellectuals in countries transitioning to democracy, Bozóki analyses the rise and fall of dissident intellectuals in Hungary in the late 20th century. He shows how that framework is applicable to other countries too as he forensically examines their activities. Bozóki argues that the Hungarian intellectuals did not become a 'New Class'. By rolling transition, he means an incremental, non-violent, elite driven political transformation which is based on the rotation of agency, and it results in a new regime. This is led mainly by different groups of intellectuals who do not construct a vanguard movement but create an open network which might transform itself into different political parties. Their roles changed from dissidents to reformers, to movement organizers and negotiators through the periods of dissidence, open network building, roundtable negotiations, parliamentary activities, and new movement politics. Through the prism of political sociology, the author focuses on the following questions: Who were the dissident intellectuals and what did they want? Under what conditions do intellectuals rebel and what are the patterns of their protest? This book will be of interest to students, researchers, and public intellectuals around the world aiming to promote human rights and democracy.

The Face of Peace

A multi-scale ethnography of government pedagogy in Colombia and its impact on peace. Colombia's 2016 peace agreement with the FARC guerrillas sought to end fifty years of war and won President Juan Manuel Santos the Nobel Peace Prize. Yet Colombian society rejected it in a polarizing referendum, amid an emotive disinformation campaign. Gwen Burnyeat joined the Office of the High Commissioner for Peace, the government institution responsible for peace negotiations, to observe and participate in an innovative "peace pedagogy" strategy to explain the agreement to Colombian society. Burnyeat's multi-scale ethnography reveals the challenges government officials experienced communicating with skeptical audiences and translating the peace process for public opinion. She argues that the fatal flaw in the peace process lay in government-society relations, enmeshed in culturally liberal logics and shaped by the politics of international donors. The Face of Peace offers the Colombian case as a mirror to the global crisis of liberalism, shattering the fantasy of rationality that haunts liberal responses to "post-truth" politics.

Technocracy and Democracy in Latin America

Praised by some as islands of efficiency in a sea of unprofessional, politicized, and corrupt states, and criticized by others for removing wide areas of policy making from the democratic arena, technocrats have become prominent and controversial actors in Latin American politics. Through an in-depth analysis of economic and health policy in Colombia from 1958 to 2011 and in Peru from 1980 to 2011, Technocracy and Democracy in Latin America explains the source of these experts' power as well as the leverage they have across state policy sectors in Latin America.

Technocracy at Work

Technocracy, loosely defined, is "rule by experts." Technocracy at Work focuses on the organizational dimensions and aspects of technocracy. Substantial sociological literatures have analyzed contemporary changes in factories, bureaucracies, and professional organizations. What has not been well investigated is the interrelatedness of these changes and the emergence of technocracy in the workplace. This book fills this gap and analyzes the social and political implications of technocracy, in both particular work organizations as well as the world-wide technocratic system, so as to inform future democratic debate.

Controlling Technocracy

Disputes over hazardous waste sites usually are resolved by giving greater weight to expert opinion over public "not-in-my-back-yard" reactions. Challenging the assumption that policy experts are better able to discern the general welfare, Gregory E. McAvoy here proposes that citizen opinion and democratic dissent occupy a vital, constructive place in environmental policymaking. McAvoy explores the issues of citizen rationality, the tension between democracy and technocracy, and the link between public opinion and policy in the case of an unsuccessful attempt to site a hazardous waste facility in Minnesota. He shows how the site was defeated by citizens who had reasonable doubts over the need for the facility. Offering a comprehensive look at the policymaking process, McAvoy examines the motivations of public officials, the resources they have for shaping opinion, the influence of interest groups, and the evolution of waste reduction programs in Minnesota and other states. Integrating archival material, interviews, and quantitative survey data, he argues that NIMBY movements can bring miscalculations to light and provide an essential check on policy experts' often partisan views. This book will be of value to those who work or study in the fields of hazardous waste policy, facility siting, environmental policy, public policy, public administration, and political science.

The European Culture for Human Rights

This book represents a collection of a selected papers from an international conference focusing on "the right to happiness", held in Bucharest in December 2012, organized by Dimitie Cantemir Christian Bucharest University, the Romanian Academy's Research Institute for Quality of Life – Bucharest and the Romanian Institute for Human Rights – Bucharest. The analysis of happiness from the perspective of the quality of life is a unique development in human rights literature. This analysis is based on people having an active role in bestowing meaning on different components of their life. People have the means and the power to decide whether their life is good or bad by taking into account their subjective perceptions, such as how different domains, such as the family, professional, and civic realms, of their lives interact and what their meanings for their entire lives are. In truth, modern society, faced with multiple risks of development, has to be controlled by the wisdom or rationality of collective ethics principles in order to grant individual satisfaction. Its means of development through cutting edge technology can contribute to human accomplishments, but also to human downfalls. Thus, in a modern culture, responsible control of technology becomes mandatory. In today's world, it is impossible to talk about individual satisfaction without collective morals, without the collective responsibility that guides the directions of development of humankind. This book discusses the issue of quality of life, and sustains a pragmatic vision of the pursuit of happiness and well-being, based on changes aimed at the continual improvement of one's interior and exterior universe.

From Autocracy to Democracy to Technocracy

This book explores human polity with respect to its nature, context, and evolution. Specifically, it examines how individual wills translate into political ideologies, investigates what social forces converge to shape governmental operations, and probes whether human polity progresses in focus from individual wills to group interests to social integrations. The book entertains five hypotheses. The first is commonsensical: where there are people there is politics. The second is analogous: humans govern themselves socially in a way that is comparable to how a body regulates itself physically. The third is rational: humans set rules, organize activities, and establish institutions upon facts, following reasons, for the purpose of effectiveness and efficiency. The fourth is random: human affairs take place haphazardly under specific circumstances while they overall exhibit general patterns and trends. The final hypothesis is inevitable: human governance evolves from autocracy to democracy to technocracy. The book presents systematic information about human polity, its form, content, operation, impact, and evolution. It sheds light on multivariate interactions among human wills, rights, and obligations, political thoughts, actions, and mechanisms, and social structures, processes, and order maintenances. Pragmatically, it offers invaluable insights into individuals as agents, groupings as agencies, and polity as structuration across the human sphere.

Beyond Technocracy

"Will the ordinary man become a scientist?...Bucchi exposes the inadequacy of the 'technocratic model' but also the weaknesses of contemporary bioethics when facing the increasing dilemmas posed by science and technology to contemporary society." -Il Corriere della Sera [Italian leading newspaper]
"Bucchi provides a clear, rigorous and accessible discussion – often enriched by a subtle irony – of complex and ambiguous issues, showing that science and innovation are not neutral terrains, but rather

among the key conflictual contexts in which contemporary social and political changes take place."

-Italian Review of Sociology "A dense but accessible book...Bucchi acutely describes the shortcomings of the technocratic and ethical responses to the contemporary dilemmas of science and technology."

-Italian Edition of the New York Review of Books Nuclear energy, stem cell technology, GMOs: the more science advances, the more society seems to resist. But are we really watching a death struggle between opposing forces, as so many would have it? Can today's complex technical policy decisions coincide with the needs of a participatory democracy? Are the two sides even equipped to talk to each other? *Beyond Technocracy: Science, Politics and Citizens* answers these questions with clarity and vision. Drawing upon a broad range of data and events from the United States and Europe, and noting the blurring of the expert/lay divide in the knowledge base, the book argues that these conflicts should not be dismissed as episodic, or the outbursts of irrationality and ignorance, but recognized as a critical opportunity to discuss the future in which we want to live. Massimiano Bucchi's analysis covers the complex realities of post-academic science as he: Explores the widely debated theme of science and democracy across a broad range of technological controversies. Overviews issues raised by the current relationship among scientists, policymakers, business interests, and the public. Dispels stereotypes of the detached scientific community versus the uninformed general public. Examines the role of the media in framing scientific debate. Addresses the question of how to move beyond technocracy to a more fruitful collaboration between scientists and citizens. Offers a bold vision for a future in which the scientific and public spheres regard each other as partners working toward a shared purpose. *Beyond Technocracy: Science, Politics and Citizens* has great value as a postgraduate text for courses in technology and society, political science, and science policy. It will also find an interested audience among scientists, policymakers, managers in the technological sector, and concerned lay readers. "In his brilliant new book, *Beyond Technocracy: Science, Politics and Citizens*, Massimiano Bucchi opens for the reader the Pandora's box of the complex relationship between scientists and citizens in contemporary, democratic societies. With major corporations owning university labs and academic researchers (and their institutions) pocketing millions (literally) from the proceedings of patents resulting from their scientific work, Bucchi analyzes the implications of contrasting drives toward for-profit and open science, private and public science. Without pulling his punches, and without hiding behind easy, popular solutions, Bucchi clearly lays out the choices we face when confronted with a science whose potential societal impact – positive and negative – is becoming ever greater (e.g., nuclear energy, genetically modified foods, genetic engineering). Based on a wealth of empirical evidence and case studies, the book is extremely accessible and well written, making it an ideal introduction to the issues. I would highly recommend it to specialists and non-specialists alike!" -Roberto Franzosi, Professor in Department of Sociology at Emory University

Research and International Trade Policy Negotiations

The international trade negotiations that were launched throughout Latin America in the 1990s created significant challenges for developing countries because of their complexity. In order to make informed decisions and successfully legitimize negotiating positions, governments and stakeholders required research, evidence and data from knowledgeable sources such as local technicians and academics. This book provides empirical-based analyses on the role of this research in the policymaking process. Each case study is based on primary fieldwork - either at the national or sectoral level - which was guided by the following overarching questions: Who are the main actors producing useful research for trade policymakers? Who are the main financial supporters of such work? What use do policymakers give to research? The volume offers a deep analysis of the nexus and interactions between the academic and public spheres, among researchers and decision-makers. Contributors also address the main obstacles for creating a virtuous circle between research and decision-making as they examine the links between the research centers, think tanks and international organizations who produced the information and the Latin American governments who used it.

The Road To Maastricht

Economic and monetary union in the European Union represents a massive change for Europe and for the world. The Road to Maastricht identifies why the agreement was possible and how the agreement was made. The book examines the motives that inspired European political leaders, the strategies that they pursued, and the institutions that were used to achieve monetary union. Drawing on a wide range of sources and unprecedented research and interviews, the book combines careful political analysis with new information about the way in which European Monetary Union was negotiated. It delves into

the complex forces at work in Europe, including the cross-national political interactions, to produce an authoritative account of the boldest and riskiest venture in the history of European integration.

The Lure of Technocracy

Over the past 25 years, Jürgen Habermas has presented what is arguably the most coherent and wide-ranging defence of the project of European unification and of parallel developments towards a politically integrated world society. In developing his key concepts of the transnationalisation of democracy and the constitutionalisation of international law, Habermas offers the main players in the struggles over the fate of the European Union (the politicians, the political parties and the publics of the member states) a way out of the current economic and political crisis, should they choose to follow it. In the title essay Habermas addresses the challenges and threats posed by the current banking and public debt crisis in the Eurozone for European unification. He is harshly critical of the incrementalist, technocratic policies advocated by the German government in particular, which are being imposed at the expense of the populations of the economically weaker, crisis-stricken countries and are undermining solidarity between the member states. He argues that only if the technocratic approach is replaced by a deeper democratization of the European institutions can the European Union fulfil its promise as a model for how rampant market capitalism can once again be brought under political control at the supranational level. This volume reflects the impressive scope of Habermas's recent writings on European themes, including theoretical treatments of the complex legal and political issues at stake, interventions on current affairs, and reflections on the lives and works of major European philosophers and intellectuals. Together the essays provide eloquent testimony to the enduring relevance of the work of one of the most influential and far-sighted public intellectuals in the world today, and are essential reading for all philosophers, legal scholars and social scientists interested in European and global issues.

How Outer Space Made America

In this innovative book Daniel Sage analyses how and why American space exploration reproduced and transformed American cultural and political imaginations by appealing to, and to an extent organizing, the transcendence of spatial and temporal frontiers. In so doing, he traces the development of a seductive, and powerful, yet complex and unstable American geographical imagination: the 'transcendental state'. Historical and indeed contemporary space exploration is, despite some recent notable exceptions, worthy of more attention across the social sciences and humanities. While largely engaging with the historical development of space exploration, it shows how contemporary cultural and social, and indeed geographical, research themes, including national identity, critical geopolitics, gender, technocracy, trauma and memory, can be informed by the study of space exploration.

European Union Negotiations

The EU policy process is dependent on negotiations as a mode of reaching agreements on, and implementing, common policies. The EU negotiations differ from traditional international negotiations in several respects and this book presents a detailed analysis of the processes while examining their distinguishing features. The authors explore the variety of negotiation processes, the continuity and institutionalization of negotiation processes as well as the involvement of a variety of actors besides governments, often linked in informal networks. Going beyond the common distinctions based on issue-areas or the EU as negotiation arena as opposed to negotiating actor externally, the authors explore the impact of different stages in the policy process and the nature of the external negotiating partner.

Technocratic Ministers and Political Leadership in European Democracies

This book provides an in-depth analysis of the 'technocratic shift' in ministerial recruitment, measuring its extent and variations over time in fourteen European countries. It addresses the question: who governs in European democratic regimes? Just a few decades ago, the answer would have been straightforward: party-men and (fewer) party-women. More recently, however, and in varying degrees across Europe, a greater proportion of non-politicians or experts have been recruited to government, as exemplified by the 2017 election of Emmanuel Macron to the French Presidency. These experts, frequently labelled "technocrats", increasingly occupy key executive positions and have emerged as powerful actors in the decision-making process. This edited collection explores the contemporary debates surrounding the relationship between technocracy, democracy and political leadership, and will appeal to scholars and advanced students interested in these fields.

The Office for Budget Responsibility and the Politics of Technocratic Economic Governance

The Office for Budget Responsibility and the Politics of Technocratic Economic Governance is about the politics of economic ideas and technocratic economic governance. It is also a book about the changing political economy of British capitalism's relationship to the European and wider global economies. It focuses on the creation in 2010 and subsequent operation of the independent body created to oversee fiscal rectitude in Britain, the Office for Budget Responsibility (OBR). More broadly, it analyses the politics of economic management of the UK's uncertain trajectory, and of British capitalism's restructuring in the 2010s and 2020s in the face of the upheavals of the global financial crisis (GFC), Brexit and COVID. A focus on the intersection between expert economic opinion of the OBR as UK's fiscal watchdog, and the political economy of British capitalism's evolution through and after Brexit, animates a framework for analysing the politics of technocratic economic governance. The technocratic vision of independent fiscal councils fails to grasp a core political economy insight: that economic knowledge and narratives are political and social constructs. The book unpacks the competing constructions of economic reason that underpin models of British capitalism, and through that inform expert economic assessment of the UK economy. It also underlines how contestable political economic assumptions undergird visions of Britain's international economic relations. These were all brought to the fore in economic policy debates about Britain's place in the world, which in the 2010s centred on Brexit. This book analyses OBR forecasting and fiscal oversight in that broader political context, rather than as a narrowly technical pursuit.

Contemporary Latin America

Latin America has changed dramatically over the past few years. While the 1990s were dominated by the political orthodoxy of the Washington Consensus and the political uniformity of centre right governments the first decade of the new century is being characterised by the emergence of a plurality of economic and political alternatives. In an overview of the history of the region over the past twenty-five years this book traces the intellectual and political origins of the Washington Consensus, assesses its impact on democracy and economic development and discusses whether the emergence of a variety of left-wing governments in the region represents a clear break with the politics and policies of the Washington Consensus. Clearly written and rigorously argued the book will be of interest to academics, students of Latin American politics and anybody interested in understanding contemporary Latin America.

Engineers in Western Europe: Ascent—and Decline?

In his book, pending between history and sociology, on engineers in thirteen countries of the western part of Europe, Professor Rolf Torstendahl approaches the development from around 1850 up to the present situation from different angles. - One examines the educational patterns and the author shows how widely different types of formation of engineers existed in Britain, France and Germany in the early period. They were paradigmatic for other countries. Differences remain but patterns have gradually become similar. - From another angle the author makes professional organisations of engineers a main object of study, and they vary from alumni associations to powerful lobby organisations. - A third approach in the book is to examine engineers versus sociological theories of professionalism on the one hand and theories of managerialism on the other. In the last chapter the author also discusses topics like technocracy and the responsibility of engineers.

Technopopulism

This is a book about a contemporary transformation in democratic politics: the rise of a new political field, techno-populism.

Technocracy and the Politics of Expertise

This book describes the role of technological experts and expertise in a democratic society. It places decision-making strategies - studied in organization theory and policy studies - into a political context. Fischer brings theory to bear on the practical technocratic concerns of these disciplines and hopes to facilitate the development of nontechnocratic discourse within these fields. The book adopts a critical perspective and addresses the restructuring of the policy sciences.

Taming the Big Green Elephant

In this open access publication it is shown, that sustainable low carbon development is a transformative process that constitutes the shifting from the initially chosen or taken pathway to another pathway as goals have been re-visited and revised to enable the system to adapt to changes. However, shifting entails transition costs that are accrued through the effects of lock-ins that have framed decisions and collective actions. The uncertainty about these costs can be overwhelming or even disruptive. This book aims to provide a comprehensive and integrated analytical framework that promotes the understanding of transformation towards sustainability. The analysis of this book is built upon negotiative perspectives to help define, design, and facilitate collective actions in order to execute the principles of sustainability. Dr Ariel Macaspac Hernandez is currently a researcher at the German Development Institute belonging to the research cluster knowledge cooperation and environmental governance. He was/is also a lecturer on negotiations, conflict and resource management, sustainability politics, environmental governance, climate change policies, development aid and sustainable energy systems in various universities in Germany, Philippines, Jamaica, Estonia, Spain and Mexico.

Hazardous Decisions

where Jeremy Richardson, Albert Weale and Hugh Ward were excellent hosts at the Department of Government and Thomas Christiansen a very good roommate. Having included the UK as a country where decision processes were far less participatory (and thus 'worse' in my own view) than those in the Netherlands, I started doing my first interviews there, which were mainly intended to identify suitable case studies for research. But then I read a highly critical review of a book that had a similar topic as my study. The critique was that cases of hazardous waste siting cannot adequately be studied without understanding their national context. This made me decide to devote some attention to the legal context of hazardous waste siting in the three countries of interest (which is of course only a part of the national context) and its development through the years. The study of the UK system of environmental regulation and land use planning was not a simple issue, and I was warned various times (for instance by Andrew Blowers at the Open University) that the legislation was highly complex and easily misinterpreted. I felt personally touched by such warnings and decided that I should perhaps approach the UK system a bit less as an evil empire and maybe be a bit more 'objective' in my appraisals.

The trade policy-making process, level one of the two level game : country studies in the Western Hemisphere (Occasional Paper ITD = Documento de Divulgación ITD, n. 13)

Explores class formation and elite struggles in post-communist Central Europe.

Making Capitalism Without Capitalists

This book offers a deep insight into the genesis and development of the European Commission's energy and climate legislation, focusing on the interplay of politics and science. How does the Commission react when confronted with knowledge? According to the author, the Commission functions as catalyst transforming knowledge into politics.

The European Commission's Energy and Climate Policy

This book is a catalogue and a reader. It is the companion to the exhibition "Democracy X' held in Cape Town 2004. It also explores a range of historical, cultural and political matters around the 10th anniversary of the new democratic South-Africa. Richly illustrated, this book includes essays of eminent

writers about topics such as the Boer War, the Iron Age, ethnic politics, nationalism, film and popular media.

Aid and Power: Case studies

The most current and issues-based textbook of its kind on the market, *European Union Politics* provides a comprehensive and authoritative overview of EU theories, institutions, policies, and history. Revised and updated in light of current events—including the Greek financial crisis—the accessible and wide-ranging nature of the fifth edition makes this the ideal starting point for students new to this evolving subject.

The Technocratic Antarctic is an ethnographic account of the scientists and policymakers who work on Antarctica. In a place with no indigenous people, Antarctic scientists and policymakers use expertise as their primary model of governance. Scientific research and policymaking are practices that inform each other, and the Antarctic environment—with its striking beauty, dramatic human and animal lives, and specter of global climate change—not only informs science and policy but also lends Antarctic environmentalism a particularly technocratic patina. Jessica O'Reilly conducted most of her research for this book in New Zealand, home of the "Antarctic Gateway" city of Christchurch, and on an expedition to Windless Bight, Antarctica, with the New Zealand Antarctic Program. O'Reilly also follows the journeys Antarctic scientists and policymakers take to temporarily "Antarctic" places such as science conferences, policy workshops, and the international Antarctic Treaty meetings in Scotland, Australia, and India. Competing claims of nationalism, scientific disciplines, field experiences, and personal relationships among Antarctic environmental managers disrupt the idea of a utopian epistemic community. O'Reilly focuses on what emerges in Antarctica among the complicated and hybrid forms of science, sociality, politics, and national membership found there. *The Technocratic Antarctic* unfolds the historical, political, and moral contexts that shape experiences of and decisions about the Antarctic environment.

European Union Politics

Is Europe's crisis merely a financial one? Tackling issues ranging from Europe's legal, institutional and cultural identity to its border, citizenship and integration policies, and looking forward to its legacy for the future, the contributors to this volume interrogate the various dimensions and contours of the European crisis. By revisiting Derrida's diagnosis of the crisis of European identity, they simultaneously propose a new direction for Europe, and an alternative response to today's crisis.

The Technocratic Antarctic

Case studies of the politics of airport planning in Dallas/Ft. Worth, London, Milan, Montreal, New York, Paris, Toronto, and Vancouver.

Europe after Derrida

Barter with the author on the Great Wall of China, do a business deal over lunch in the Eagle's Nest in the Hong Kong Hilton and mediate among millionaire developers in the office of the longest-serving mayor in the world. Join the author in his recounting of cases he's handled over the past twenty years including same-sex sexual harassment, oil spill simulations after the Exxon Valdez spill and on the green line with peacekeepers in Cyprus. These entertaining case studies are recounted using proven and ethical techniques. Some cases are funny; others involve life and death. All contain valuable lessons. Academics will benefit from the appendices which contain a glossary of terms and guidance for ethnographers. A 19 page bibliography and more than 140 endnotes will guide readers to further study.
