Understanding Health Services

This book demonstrates the need for contributions from medicine, sociology, economics, history and epidemiology. It also shows the necessity to consider health care at three key levels: individual patients and their experiences; health care organisations such as health centres and hospitals; and regional and national institutions such as governments and health insurance bodies. The book examines: inputs to health services, processes of care, outcomes, organization of services and improving the quality of health care. This text is aimed primarily at health professionals on Masters programmes in public health, health research, health promotion and similar courses. Nick Black is Professor of Health Services Research at the London School of Hygiene and Tropical Medicine, UK. Nick's main current research interests are focused on the assessment of the quality of health care and the performance of health care providers. Lorelei Jones is a research fellow in the Department of Health Services Research and Policy at the London School of Hygiene and Tropical Medicine, UK. Lorelei's research interests are in UK health policy and health service delivery and organization, particularly organizational sociology and the sociology of the professions. Ipek Gurol-Urganci is a lecturer in the Department of Health Services Research and Policy at the London School of Hygiene and Tropical Medicine, UK. Her research interests are in health system and service evaluations, particularly focusing on the performance and quality of primary care, women's health care and maternity services.

Mobile Health Solutions for Biomedical Applications

"This book gives detailed analysis of the technology, applications and uses of mobile technologies in the healthcare sector by using case studies to highlight the successes and concerns of mobile health projects"--Provided by publisher.

Managing Health Services

“An essential and comprehensive guide for students and researchers in a range of health care disciplines investigating health services, health care and well-being.” Professor Robert J. Edelmam, Emeritus Professor of Clinical and Forensic Psychology, University of Roehampton, UK “An invaluable resource for students, researchers and practitioners from all health backgrounds and disciplines, who are involved in research to produce a robust evidence-base to inform the development, provision, delivery and evaluation of healthcare services.” Felicity Smith, Professor Emeritus of Pharmacy Practice, UCL School of Pharmacy, UK “The fifth edition of ‘Research Methods in Health’ continues to provide an excellent broad based introduction to the subject.” Virginia Berridge, Professor of History and Health Policy, Centre for History in Public Health, London School of Hygiene and Tropical Medicine, UK This bestselling book provides an accessible introduction to the concepts and practicalities of multi-disciplinary research methods in health and health services. The new edition has updated and expanded coverage of: •International examples, terms and approaches •Epidemiology and methods of tracing epidemics •Aging population demography and bio-demography •Evaluation and assessment of health services •Health services research and audit, including data generation •Methods of evaluating patients’ perspectives •Measuring quality of life outcomes •Health economics methods and applications •Quantitative and qualitative research Core processes and methodologies such as social research, mixed methods, literature reviewing and critical appraisal, secondary data analysis and evidence-based practice will be covered in detail. The book also looks at the following key areas of health research: •Health needs •Morbidity and mortality trends and rates •Costing health services •Sampling for survey research •Cross-sectional and longitudinal survey design •Experimental methods and techniques of group assignment •Questionnaire design •Interviewing techniques •Coding and analysis of quantitative data •Methods and analysis of qualitative observational studies •Unstructured interviewing The book is grounded in the author's career as a researcher on health and health service issues, and the valuable experience this has provided in meeting the challenges of research on people and organisations in real life settings. Research Methods in Health, Fifth Edition is an essential companion for students and researchers of health and health services at all levels, health clinicians and policy-makers with responsibility for applying research findings and judging the soundness of research. Ann Bowling is a sociologist, specialising in research on ageing, research methods, quality of life, public and social health. She was Professor of Health Sciences at the University of Southampton, UK (2012–17), where she is now Visiting Professor. Ann was awarded the Highly Commended book prize for the 4th edition of Research Methods in Health at the 2015 BMA Medical Book Awards.

Research Methods in Health: Investigating Health and Health Services

Leading and Managing Health Services: An Australasian Perspective is an indispensable resource for students in the ever-changing healthcare industry.

Leading and Managing in Health Services

Pervasive healthcare is an emerging research discipline, focusing on the development and application of pervasive and ubiquitous computing technology for healthcare and wellness. Pervasive healthcare seeks to respond to a variety of pressures on healthcare systems, including the increased incidence of life-style related and chronic diseases, emerging consumerism in healthcare, need for empowering patients and relatives for self-care and management of their health, and need to provide seamless access for healthcare services, independent of time and place. Pervasive healthcare may be defined from two perspectives. First, it is the development and application of pervasive computing (or ubiquitous computing, ambient intelligence) technologies for healthcare, health and wellness management. Second, it seeks to make healthcare available to anyone, anytime, and anywhere by removing locational, time and other restraints while increasing both the coverage and quality of healthcare. This book proposes to define the emerging area of pervasive health and introduce key management principles, most especially knowledge management, its tools, techniques and technologies. In addition, the book takes a socio-technical, patient-centric approach which serves to emphasize the importance of a key triumvirate in healthcare management namely, the focus on people, process and technology. Last but not least the book discusses in detail a specific example of pervasive health, namely the potential use of a wireless technology solution in the monitoring of diabetic patients.

Critical Issues for the Development of Sustainable E-health Solutions

An essential guide to organizing and offering mental health services on campus. Stressed by increasing student demand for mental health services, campus counseling centers across the country are

grappling with how best to deliver ethical, effective, and efficient service. Hampered by limited budgets, most centers find it deeply challenging to address growing college mental health service needs. Yet little conceptual training is provided to student affairs, higher education, health, and mental health professionals who deliver campus mental health services. In *Delivering Effective College Mental Health Services*, psychologist Lee Keyes aims to change that. He offers sound, field-tested advice for creating a congruent, cross-division, and service-oriented college counseling enterprise that best fits its campus culture and students. This useful handbook for administering counseling services • poses questions and offers practical advice to help college counseling centers form a consistent philosophical model • lays out conceptual groundwork for constructing college counseling services, from training activities to counseling/psychotherapy processes • takes into account the pressures (time related, economic, political, cultural) that strain universities • explains how to cultivate an accurate and empathic response to each individual, their entire history and context, and their possible life trajectory Written by a leading provider of college mental health services, *Delivering Effective College Mental Health Services* is an essential guide to organizing and offering mental health services on university and college campuses.

Delivering Effective College Mental Health Services

This title demystifies artificial intelligence (AI) and analytics, upskilling individuals (healthcare professionals, hospital managers, consultants, researchers, students, and the population at large) around analytics and AI as it applies to healthcare. This book shows how the tools, techniques, technologies, and tactics around analytics and AI can be best leveraged and utilised to realise a healthcare value proposition of better quality, better access and high value for everyone every day, everywhere. The book presents a triumvirate approach including technical, business and medical aspects of data and analytics and by so doing takes a responsible approach to this key area. This work serves to introduce the critical issues in AI and analytics for healthcare to students, practitioners, and researchers.

Summary of Health Services Research and Development Activities Active in Fiscal Year 1970 in the Department of Health, Education, and Welfare

Case-based intervention strategies for mental health professionals working with college and university students. Young adults enter college with many challenges—complicated family dynamics, identity issues, and extreme pressure to succeed, among others. Students may also have mental health difficulties, ranging from adjustment disorders to mood disorders, and growing numbers of them are seeking help on campus. But these students are also resilient and eager to learn, stepping onto campus with hope for a new and better phase of life. Doris Iarovici, a psychiatrist at Duke University Counseling and Psychological Services, sees in college and university mental health services an opportunity for mental health professionals to bring about positive change with young people during a crucial period of their development. Dr. Iarovici describes the current college mental health crisis and narrates how college mental health services have evolved along with changes in student populations. She discusses students' lifestyle problems and psychiatric concerns, using case vignettes to explore a variety of interventions. Included are discussions of substance abuse, relationship difficulties, eating disorders, depression and anxiety, and culture clashes. Problems uniquely addressed in this book include sleep disturbances and perfectionism. An essential component of the volume is a guide to making emergency assessments, from risk classification and hospitalization to public safety and communication within and outside the campus community.

Digital Health Solutions to HPV Vaccination

Health service delivery is being restructured in both industrialised and developing countries. Public health scholars and policy makers in this volume show how this process is accelerating as a result of diverse factors including fiscal pressure, privatisation of infrastructure, and the impending renegotiation of the WTO General Agreement on Trade in Services (GATS). The key policy issues that arise concern the implications of these changes for access and equity in public health provision. The volume reviews the rapidly changing context in which financing health care and its relationship to globalization and privatisation are taking place. It examines the specific mechanisms and institutional processes involved. And it explores various contrasting experiences, including HMOs in the USA, Britain's NHS, social health insurance in Western Europe, developing countries, and Cuba.

Dimensions of Intelligent Analytics for Smart Digital Health Solutions

Healthcare public health is concerned with the application of population sciences to the design, organisation, and delivery of healthcare services, with the ultimate aim of improving population health. This book provides an introduction to the methods and subject matter of healthcare public health, bringing together coverage of all the key areas in a single volume. Topics include healthcare needs assessment; access to healthcare; knowledge management; ethical issues; involving patients and the public; population screening; health promotion and disease prevention; new service model; programme budgeting and preparing a business case; evaluation and outcomes; patient safety, and implementation and improvement sciences; and healthcare in remote and resource-poor regions. Drawing on international as well as national perspectives, this volume will be relevant wherever healthcare is delivered. It will enable students, researchers, academics, practitioners, and policy-makers to contribute to the goals of designing and delivering health services that improve population health, reduce inequalities, and meet the needs of individuals and communities.

Improving Health Care Through Research and Development

The enormous health and social burdens associated with mental disorders have global reach and persist in the setting of unmet needs. To address these, the pipeline of global mental health trainees must be expanded and nurtured as the next generation of practitioners, investigators, and educators advance innovation in mental health prevention, promotion, and health delivery. This book offers a much-needed introduction to the rapidly evolving field of global mental health. The editors bring their extensive expertise and experience in global mental health research, practice, and training, which includes working in academic and non-profit settings, building collaborations, and teaching hundreds of students and trainees. The volume's 12 chapters—authored by over 60 contributors from multiple disciplines—offer a breadth of content that comprises an introductory framework. This volume is an essential read for learners and educators who seek to explore or deepen their interest in the field of global mental health. Its orientation to fundamentals of practice and training and contextualization with social science perspectives will also be invaluable to health professionals, social scientists, policymakers, and other professionals who are invested in training the next generation of global mental health practitioners.

Employee Health Services

An in-depth examination of the mental health of university communities, and how it can be improved.

Mental Health Issues and the University Student

Integration is now a key expectation within the delivery of health and social care services in the UK and internationally. However, it still remains difficult to achieve and sustain in practice. Based on learning from successful, and unsuccessful, integrated care initiatives, this book is an invaluable guide for those responsible for leading, managing and delivering integrated care across health, social care and housing. Written by an experienced team of researchers who have studied, led and supported integrated care for many years *Integrated Care in Practice* draws on latest evidence, innovative practice and helpful theory. It provides insights into the common pitfalls that such initiatives can encounter and demonstrates positive approaches to anticipating and responding to such challenges. Throughout, real-case examples are provided, and concepts and models are connected with the realities of day-to-day life for those working within these services. Integrated care is a goal to aspire to - this book helps to explain how we can turn this goal into practical action and positive outcomes.

Managing Health Services

-First edition by McGraw-Hill, 1998. -Textbook for courses on health administration and planning -Author is fairly well-known in the field.

Research in Community Health

Today, as never before, healthcare has the ability to enhance the quality and duration of life. At the same time, healthcare has become so costly that it can easily bankrupt governments and impoverish individuals and families. Health services research is a highly multidisciplinary field, including such areas as health administration, health economics, medical sociology, medicine, , political science, public health, and public policy. The *Encyclopedia of Health Services Research* is the first single reference source to capture the diversity and complexity of the field. With more than 400 entries,

these two volumes investigate the relationship between the factors of cost, quality, and access to healthcare and their impact upon medical outcomes such as death, disability, disease, discomfort, and dissatisfaction with care. Key Features Examines the growing healthcare crisis facing the United States Encompasses the structure, process, and outcomes of healthcare Aims to improve the equity, efficiency, effectiveness, and safety of healthcare by influencing and developing public policies Describes healthcare systems and issues from around the globe Key Themes Access to Care Accreditation, Associations, Foundations, and Research Organizations Biographies of Current and Past Leaders Cost of Care, Economics, Finance, and Payment Mechanisms Disease, Disability, Health, and Health Behavior Government and International Healthcare Organizations Health Insurance Health Professionals and Healthcare Organizations Health Services Research Laws, Regulations, and Ethics Measurement; Data Sources and Coding; and Research Methods Outcomes of Care Policy Issues, Healthcare Reform, and International Comparisons Public Health Quality and Safety of Care Special and Vulnerable Groups The Encyclopedia is designed to be an introduction to the various topics of health services research for an audience including undergraduate students, graduate students, and general readers seeking non-technical descriptions of the field and its practices. It is also useful for healthcare practitioners wishing to stay abreast of the changes and updates in the field.

Restructuring Health Services

Contains more than 470 practice questions and answers! The Health Services Executive (HSE) Q&A Exam Review provides a comprehensive and practical study tool for all students and professionals seeking HSE qualification. Divided into three parts, this resource allows readers to test their knowledge in each area covered by the HSE exam established by the National Association of Long-Term Care Administrator Boards (NAB). Part I chapters feature multiple-choice, single-best-answer questions grouped by domain – Customer Care, Supports, and Services; Human Resources; Finance; Environment; and Management and Leadership – with detailed rationales accompanying each answer. Part II simulates the exam, offering practice exams on the Core of Knowledge Examination and on each of the three lines of service – Nursing Home Administration (NHA), Residential Care/Assisted Living (RC/AL), and Home- and Community-Based Services (HCBS). These exams are structured to model the content blueprint of the licensure exams. Part III includes the practice exam answers with rationales, featured separately for self-assessment and further learning. Written by leading experts in long-term care administration and containing over 470 questions with rationales, this Q&A review is the most authoritative and comprehensive in the market. It is a must-have resource for long-term care administrators, whether taking their initial licensure exam or completing the remaining lines of service exams. Key Features: Over 470 multiple choice, single-best answer questions with answers and detailed rationales Extensive coverage of the Health Service Executive (HSE) exam and the individual lines of service exams (NHA, RC/AL, HCBS) Written by leading experts and educators in long-term care administration and leadership

Healthcare Public Health

Most of the current literature on healthcare operations management is focused on importing principles and methods from manufacturing. The evidence of success is scattered and nowhere near what has been achieved in other industries. This book develops the idea that the logic of production, and production systems in healthcare is significantly different. A line of thing that acknowledges the ingenious characteristics of health service production is developed. This book builds on a managerial segmentation of healthcare based on fundamental demand-supply constellations. Demand can be classified with the variables urgency, severity, and randomness. Supply is constrained by medical technology (accuracy of diagnostics, efficacy of therapies), patient health behavior (co-creation of health), and resource availability. Out of this emerge seven demand-supply-based operational types (DSO): prevention, emergencies, one-visit, electives, cure, care, and projects. Each of these have distinct managerial characteristics, such as time-perspective, level of co-creation, value proposition, revenue structure, productivity and other key performance indicators (KPI). The DSOs can be envisioned as platforms upon which clinical modules are attached. For example, any Emergency Department (ED) must be managed to deal with prioritization, time-windows, agitated patients, the necessity to save and stabilize, and variability in demand. Specific clinical assets and skill-sets are required for, say, massive trauma, strokes, cardiac events, or poisoning. While representing different specialties of clinical medicine they, when applied in the emergency – context, must conform to the demand-supply-based operating logic. A basic assumption in this book is that the perceived complexity of healthcare arises from the conflicting demands of the DSO and the clinical realms. The seven DSOs can neatly be

juxtaposed on the much-used Business Model Canvas (BMC), which postulates the business model elements as value proposition; customer segments, channels and relations; key activities, resources and partners; the cost structure; and the revenue model.

Global Mental Health Training and Practice

Preceded by: Ethical challenges in the management of health information / [edited by] Laurinda Beebe Harman. 2nd edition. 2006.

Improving University Mental Health

Managing a modern public health system requires skills drawn from diverse fields including business, education, and government. Essentials of Management and Leadership in Public Health offers public health students broad exposure to the interdisciplinary skills and knowledge needed to effectively manage and lead public health organizations today. This book covers the full spectrum of essential competencies required to manage public health organizations, from communication and cultural proficiency to leadership, relationship building, ethics, and program planning.

Integrated Care in Action

Despite having surmounted numerous obstacles, the Affordable Care Act--also commonly known as "Obamacare"--remains highly controversial and faces ongoing legal and political challenges. The law's staunchest critics want to repeal and replace the entire law, while even its supporters acknowledge that serious changes are needed. The question is: replace it with what? In A Better Choice: Healthcare Solutions for America, economist and John C. Goodman answers the question clearly and concisely. For anyone who wants to better understand Obamacare's most serious problems and learn about some of the boldest prescriptions designed to remedy them, Goodman's book is a must-read.

Health Services Planning

Advancements in medical and healthcare technologies pave the way to improving treatments and diagnoses while also streamlining processes to ensure the highest quality care is given to patients. In the last few decades, revolutionary technology has radically progressed the healthcare industry by increasing life expectancy and reducing human error. Advanced Methodologies and Technologies in Medicine and Healthcare provides emerging research on bioinformatics, medical ethics, and clinical science in modern applications and settings. While highlighting the challenges medical practitioners and healthcare professionals face when treating patients and striving to optimize their processes, the book shows how revolutionary technologies and methods are vastly improving how healthcare is implemented globally. This book is an important resource for medical researchers, healthcare administrators, doctors, nurses, biomedical engineers, and students looking for comprehensive research on the advancements in healthcare technologies.

Health Technology

Implementing Change in Health Systems brings fresh thinking and evidence to the continuing debate about market reforms of health care and other public services. The book examines the development and implementation of national cost-containment programs and health system reorganizations in the UK, Sweden and the Netherlands — countries that have been leaders in health system reform. The book provides a new framework for analyzing public policy implementation and system change, synthesizing diverse streams of academic research and thinking. It explores the processes of implementing market reforms in each country and considers the outcomes, both expected and unintended. In all three countries competitive reform encountered serious technical, organizational and political obstacles. Yet they triggered important system changes and paved the way for significant new health policies. The complex outcomes of the reforms included • changes in the quality, efficiency and costs of care • growing managerial and political control over physicians and other health care professionals • increased influence and centrality of community-based care • Diffusion of ideas and practices from business management into health care. Implementing Change in Health Systems sheds new light on crucial policy issues that are currently being debated in the United States and many other countries. The book will be of value to students, researchers, and practitioners in health policy and public policy.

Water-energy-food-health solutions & innovations for low-carbon, climate-resilient drylands

Software applications once held on local computers and servers are beginning to shift to the public Internet sphere, and private health information is no exception. The likelihood of placing once restricted and private health records “in the cloud” is increasing. Cloud Computing Applications for Quality Health Care Delivery focuses on cloud technologies that could affect quality in the healthcare field. Leading experts in this area offer their knowledge and contribute to the demystification of healthcare in the Cloud. This publication will prove to be a useful tool for undergraduate and graduate students of healthcare quality and management, healthcare managers, and industry professionals.

A Guide to the Development of Health Resource Inventories

The evidence is undeniable. By any measure, the US spends more on healthcare than any other country in the world, yet its health outcomes as measure by longevity are in the bottom half among developed countries, and its health-related quality of life has remained constant or declined since 1998. In addition to high costs and lower than expected outcomes, the healthcare delivery system is plagued by treatment delays as it can take weeks to see a specialist, and many people have limited or no access to care. Part of the challenge is that the healthcare delivery system is a large, complex, and sophisticated value creation chain. Successfully changing this highly interconnected system is difficult and time consuming because the underlying problems are hard to comprehend, the root causes are many, the solution is unclear, and the relationships among problems, causes, and solution are multifaceted. To address these issues, the book carefully explains the underlying problems, examines their root causes using information, data, and logic, and presents a comprehensive and integrated solution that addresses these causes. These three steps are the methodological backbone of this book. A solution depends on understanding and applying the principles of patient-centered care (PCC) and resource management. PCC puts patients, supported by their primary care physicians, back in the role as decision makers and depends on patients being responsible for their health including making good life-style choices. After all, the best way to reduce healthcare costs and increase quality of life is to improve our health and wellness and as a result need less care. In addition, health insurance must be rethought and redesigned so it is less likely to lead to overuse. For many people with health insurance, the out-of-pocket cost of healthcare are small, so healthcare decision making is often biased toward consumption. Effective resource management means that healthcare providers must do a better job of acquiring and using resources in order to provide care quickly, productively, and correctly. This means improving healthcare strategy and management, accelerating the use of information technology, making drug costs affordable and fair, reducing the incidence of malpractice, and rebuilding the provider network. In addition, implementation is difficult because there are many participants in the healthcare delivery value chain, such as physicians, nurses, and medical technicians, as well as many provider organizations, such as hospitals, clinics, physician offices, and labs. Further up the value chain there are pharmaceutical companies, equipment providers, and other suppliers. These participants have diverse and sometimes conflicting goals, but each must be willing to accept change and work in a coordinated manner to improve healthcare. To overcome these problems, strong national leadership is needed to get the attention and support from the people and organizations involved in healthcare and to make the comprehensive changes that will lower healthcare costs, improve healthcare quality, eliminate delays, increase access, and enhance patient satisfaction.

Encyclopedia of Health Services Research

The realisation that most mental disorders have their onset before the age of twenty-five has focused psychiatric research towards adolescent mental health. This book provides vivid examples of school mental health innovations from eighteen countries, addressing mental health promotion and interventions. These initiatives and innovations enable readers from different regions and disciplines to apply strategies to help students achieve and maintain mental health, enhance their learning outcomes and access services, worldwide. Through case studies of existing programs, such as the integrated system of care approach in the USA, the school-based pathway to care framework in Canada, the therapeutic school consultation approach in Turkey and the REACH model in Singapore, it highlights challenges and solutions to building initiatives, even when resources are scarce. This will be essential reading for educators, health providers, policy makers, researchers and other stakeholders engaged in helping students achieve mental health and enhance their learning outcomes.

The Health Services Executive (HSE) Q&A Review

Workers and their families, employers, and society as a whole benefit when providers deliver the best quality of care to injured workers and when they know how to provide effective services for both prevention and fitness for duty and understand why, instead of just following regulations. Designed for professionals who deliver, manage, and hold oversight responsibility for occupational health in an organization or in the community, Occupational Health Services guides the busy practitioner and clinic manager in setting up, running, and improving healthcare services for the prevention, diagnosis, treatment, and occupational management of work-related health issues. The text covers: an overview of occupational health care in the US and Canada: how it is organized, who pays for what, how it is regulated, and how workers' compensation works how occupational health services are managed in practice, whether within a company, as a global network, in a hospital or medical group practice, as a free-standing clinic, or following other models management of core services, including recordkeeping, marketing, service delivery options, staff recruitment and evaluation, and program evaluation depth and detail on specific services, including clinical service delivery for injured workers, periodic health surveillance, impairment assessment, fitness for duty, alcohol and drug testing, employee assistance, mental health, health promotion, emergency management, global health management, and medico-legal services. This highly focused and relevant combined handbook and textbook is aimed at improving the provision of care and health protection for workers and will be of use to both managers and health practitioners from a range of backgrounds, including but not limited to medicine, nursing, health services administration, and physical therapy.
