Comforting the Fearful

"Often Christians ask, how can they be afraid and still have faith? Bringing together the wisdom of the Christian faith tradition and insights from several schools of modern psychology, this book offers a careful analysis of the origin and dynamics of fear in human experience. The author shows how to transform fears from crippling emotion into a way to search for God. While of interest to all, the book is especially meant to help lay ministers comfort others."--BOOK JACKET.Title Summary field provided by Blackwell North America, Inc. All Rights Reserved

The Discerning Heart

Health Care Ethics is a comprehensive study of significant issues affecting health care and the ethics of health care from the perspective of Catholic theology. It aims to help Christian, and especially Catholic, health care professionals solve concrete problems in terms of principles rooted in scripture and tested by individual experience; however, its basis in real medical experience makes this book a valuable resource for anyone with a general interest in health care ethics. This fifth edition, which includes important contributions by Jean deBlois, C.S.J., considers everyday ethical questions and dilemmas in clinical care and deals more deeply with issues of women's health, mental health, sexual orientation, artificial reproduction, and the new social issues in health care. The authors devote special attention to the various ethical theories currently in use in the United States while clearly presenting a method of ethical decision making based in the Catholic tradition. They discuss the needs of the human person,

outlining what it means to be human, both as an individual and as part of a community. This volume has been significantly updated to include new discussions of recent clinical innovations and theoretical issues that have arisen in the field: • the Human Genome Project • efforts to control sexual selection of infants • efforts to genetically modify the human genotype and phenotype • the development of palliative care as a medical specialty • the acceptance of non-heart beating persons as organ donors • embryo development and stem cell research • reconstructive and cosmetic surgery • nutrition and obesity • medical mistakes • the negative effects of managed care on the patient-physician relationship • recent papal allocution regarding care of patients in a persistent vegetative state and palliative care for dying patients

"Nurses play a vital role in improving the safety and quality of patient care -- not only in the hospital or ambulatory treatment facility, but also of community-based care and the care performed by family members. Nurses need to know what proven techniques and interventions they can use to enhance patient outcomes. To address this need, the Agency for Healthcare Research and Quality (AHRQ), with additional funding from the Robert Wood Johnson Foundation, has prepared this comprehensive, 1,400-page, handbook for nurses on patient safety and quality -- Patient Safety and Quality: An Evidence-Based Handbook for Nurses. (AHRQ Publication No. 08-0043)." - online AHRQ blurb, <http://www.ahrq.gov/qual/nurseshdbk/>
