How does an autopsy work?

There's two types: forensic and clinical.

All legally investigated deaths fall into 5 categories: natural, accident, homicide, suicide and undetermined.

Forensic pathologists are physicians, trained to perform autopsies.

First they gather information on you, your death and your medical records.

For a complete internal exam they start with the chest, making a Y-shaped incision.

If they need a peek inside your noggin, the examiner will move the rubber block under your neck like a pillow.

system engineered for efficient and complete documentation of the **post-mortem**, ...

MacroVIEW Mobile Macro Digital Imaging System

MacroVIEW is engineered for efficient and complete documentation of the post-mortem examination

Featured a high-resolution 4K camera and a user-friendly control terminal

To support the case description, the operator can capture images

Images can be edited by measuring sizes and surfaces, adding freehand drawings and texts

MacroVIEW integrates and stores the digital documentation, eliminating the transcription of audio tapes

REMOTE VIEWING AND EDITING

After the autopsy, the digital documentation is available from any PC, via LIS or shared folder

The pathologist views and edits images, adding annotations for the report

IMAGE-ENHANCED REPORTS

MacroVIEW automatically links the case ID to the digital documentation

IDEAL FOR TEACHING & EDUCATION PURPOSES

MacroVIEW is suitable for live streaming and digital documentation is immediately available for publications
