Use it Or Lose It!

What do business school graduates learn, and how helpful is it for managing in the everyday, messy reality of organisations? What does it mean to apply 'best practice', or to take up 'evidence-based management' and what kind of thinking does this imply? In *Rethinking Management*, Chris Mowles argues that many management courses still largely assume a linear and predictable world, when experience tells us that the opposite is the case. He questions some of the more orthodox conceptual assumptions that underpin much management education and instead, encourages leaders and managers to take their everyday experience of working with others seriously. People in organisations co-operate and compete to get things done, and constrain and enable each other in relationships of power. Because of this there are always unintended consequences of our actions - uncertainty is inherent in the everyday. Chris Mowles draws on the complexity sciences, the sciences of uncertainty rather than certainty, and the social sciences to explore more helpful ways to think and talk about our lived reality. He takes concrete examples from contemporary organisations, to debate whether argue that understanding the radical implications of uncertainty is central to the task of leading and managing. *Rethinking Management* explores narrative alternatives to the ubiquitous grids and frameworks that are routinely taught in business schools, and encourages management professionals and educators to recognise the importance of judgement, improvisation and the everyday politics of organisational life.

The brain is not the first body part we think of exercising, but that's exactly what we should be doing, say a growing number of researchers and health professionals who study brain health. Did you know that the human brain starts slowing down as early as age 30? What muscles need is a workout to keep them toned and the same goes for the brain. Daily mental stimulation a couple hours a day in the form of word puzzles, brain teasers, trivia, social interaction and physical activity allows neural pathways in the brain to continue to grow. So how can you keep your brain fit? Brain exercise is the answer. After reading the fun trivia facts, to test your memory, go to the end of the book and complete the fun trivia facts quiz. How to Maximize Your Brain

BEST GIFT TO KEEP THE BRAIN FIT! Millions of people go to gyms, fitness centers and parks everyday to keep their body & soul fit. Millions of people diet to get rid of excess fat. Yet the same millions may not be paying attention to their brain, which is the greatest and most essential asset we have. While a neglected body shows visually, a neglected brain is hidden inside the skull. An agile brain is necessary for learning, performing at work and making the right business decisions. A higher intelligence and sharper mind may also help us to succeed in inter-personal relationships. God gave the average man or woman an IQ of 150. Yet in practice most people's IQ level is around 120. Some may be as low as 100. A chimpanzee's IQ is 80, equivalent to the IQ of a four 4 year old child. Some of us are very fortunate to have professions or life interests that require the use of brainpower, but for most of us extra exercises are necessary to keep our minds sharp. The human brain is similar to other organs in one respect: you use it or lose it. Daily life forces to use a certain minimal amount of brain function. The goal of this mixed puzzles book is to provide brain fitness exercises for adults and seniors. The human brain is a very complex instrument and must be challenged in many ways. It is anticipated that the readers' IQ may advance from 120 to 140 by working through to the end of this book. How about the final 10 points necessary to climb to God-given IQ of 150? For that you may need to do brain challenging activities beyond this book: reading, studying science & engineering, programming computers, crossword puzzles, watching movies & TV trivia shows and learning new skills. It is very important to try all different kinds of puzzles to motivate every area of our brains. Some puzzles use only certain areas of the brain, for example, finding missing letters in words requires a dictionary search in our brain. We can be pretty organized about it, like a computer, trying all 26 letters of the alphabet. This puzzle book is designed to keeping your brain active in an entertaining and often humorous way. Recent scientific research has shown that keeping the brain active with a mixture puzzles of various types can lead to a longer, more fulfilling life and reduce the chances of Alzheimer's Disease, Parkinson's Disease, memory loss & dementia associated with advanced age. In the case of a stroke, daily puzzle solving can be instrumental in recovering some of the brain's normal functions quickly. The left side of brain is the analytical side, responsible for logic, science and mathematics. Interestingly enough, it also controls the right side of the body. The right side of the brain is in charge of creativity and the arts. It also controls the left side of the body. Both types of thinking are required in order to solve picture puzzles, crossword & word search puzzles. Thus using both sides of the brain at the same time, we create connections between the left and right brain hemispheres. These connections are important requirements for learning, discovering and remembering. During puzzle solving the production of dopamine increases. This element is essential for the proper functioning of brain cells. The major puzzle groups in this book are: language, math, logic, picture puzzles, quizzes and brain teasers. Puzzles with grids and graphics are especially good for improving short-term visual memory. Puzzles help us develop brain skills to solve problems quickly and innovatively and to communicate clearheaded ideas. These skills are greatly valued intellectual assets in the job marketplace. Trial & error, alternative approaches, creating theories, testing hypotheses, learning from experience, performing calculations and changing our point of views are required brain processes whether solving a word search puzzle or even perhaps designing a mission to Mars! Enjoy the puzzles while boosting your brainpower - I'll look for you on Mars!!

Our life span has been on the rise over the last two decades still, that has not enabled most of us to grey gracefully. Hardly, a few make a post-retirement plan for old age happiness. This volume is an outcome of several workshops and post-workshop interactions that the author, Dr Siddhartha Ganguli, had recently conducted through his brain-body management organisation Learning Club, deliberating on these aspects of an individual's life.

Use Your Brain to Change Your Age

A 30-day anti-aging program for rapid results using the fundamental movements and principles of the bestselling *Aging Backwards*, featuring an accelerated program for turning back the clock. The field of aging research has exploded with new clinical findings. Many misconceptions about aging—including the beliefs that disease, immobility, and pain are inevitable—have been debunked. Today, we know that the choices we make, from what we eat to how much and how we move, play a critical role in healthy aging. PBS fitness personality and bestselling author Miranda Esmonde-White created her breakthrough exercise program, *Essentrics*, more than twenty years ago. In that time, she has helped everyone from professional athletes to breast cancer survivors to weekend warriors heal and recover from injuries using her gentle Essentric stretching and exercise method that consists of movements that engage all of the body's muscles and connective tissues. In *Aging Backwards: The Fast Track*, Miranda offers readers systematic workouts to supplement and accelerate the original program, along with new information on the latest anti-aging science to help keep us strong, fully mobile, and looking and feeling young. Using her 30-day fast-track program, you'll see rapid results in increased mobility, strength, flexibility, body shape, pain relief and overall health. *Aging Backwards: The Fast Track* empowers everyone—young and old, athletic or sedentary—with the information and tools to slow down the clock and keep it there.
