International Trade, Investment, and the Sustainable Development Goals

A multi-disciplinary investigation of how economic globalization can help achieve the UN's 2030 Agenda, exploring trade-offs among the Goals.

Impact of Rich Countries' Policies on Poor Countries

"All United Nations heads of state have endorsed the Millennium Development Goals, which aim to reduce the incidence of absolute poverty by half by 2015. To reach those goals, growth in developing countries will have to be twice the levels achieved in the 1990s for the next fifteen years. This will require, at the least, new rules of the development game. At present, rich countries exercise control over the institutions that oversee the global economy. This volume addresses a curiously neglected area of policy analysis--the impact of rich countries' policies on the global poor. Four-fifths of the world's people subsist on one-fifth of the world's income. One-fifth live in abject poverty, on less than one dollar a day. The main responsibility for reducing poverty reduction naturally rests with developing countries. But globalization means that rich countries must also play their part. Industrialized countries dominate global environmental management through the heavy ecological footprint of their production and consumption patterns. Adjustments of their policies by rich countries may be as critical as government reforms in poor countries. Past research has concentrated on policy adjustments that need to be made within poor countries to aid effectiveness, and trade reform. Relatively little is known about the economic consequences of migration, control of intellectual property, and environmental regulations. Even less research has been done on the interaction and combined impact of the full spectrum of rich countries' policies on the economy, society, and ecology in poor countries. These knowledge gaps inhibit rational debate, let alone evidence-based policymaking that may lead towards sustainable and equitable growth. At current levels, aid alone cannot deliver adequate progress towards the Millennium Development Goals. The surveys by eminent development analysts and practitioners included in this volume sketch a road map for a better understanding of the"

Globalization

From the streets of Seattle to corporate boardrooms to new factories in third-world nations, globalization is subject to very different and often explosively divergent interpretations. Where some see globalization as driving poor countries into further poverty, others see it as the path to economic salvation and democratic rule. With original contributions from ten eminent economists, *Globalization: What's New* cuts through the confusion and rhetoric to offer straightforward, incisive analysis of globalization and its future. Coming from some of globalization's most prominent supporters (David Dollar), its most vocal critics (Joseph Stiglitz), and those in-between, this collection presents diverse and original perspectives on globalization's immense reach that dig to the core of many debates. The contributors analyze recent trends in trade, immigration, and capital flows; why some poor countries have grown while others have stagnated during the past two decades; future opportunities for low-wage workers; globalization's impact on jobs and wages in poor countries and in the United States; the surprising environmental benefits of globalization; the degree to which foreign aid helps developing countries; the failures of international institutions in governing the global economy and supporting democracy; and how foreign loans and investments can wreak havoc on a nation's economy.

International Trade and Economic Development

This graduate textbook offers advanced and contemporary readings in international trade and economic development and provides an overview of the fundamental topics in this area. It brings together many of the issues that are considered staple reading for a course in trade and development and it offers a systematic coverage of the relevant and state of the art research on various aspects of the subject. This includes detailed analysis of important sub-topics such as: trade and labour market, trade and public economics, the theory of the second best, foreign aid, factor mobility, and regional and global welfare. It also covers international trade and labour standards, the informal labour market, and TRIPS.

Aimed at post-graduate students interested in trade theory and applications in development issues, this book should also prove a valuable resource for practicing economists, policy makers, and advanced undergraduate students studying international trade. The text balances extensive coverage of available literature in the area with substantive inclusions from new research published in leading journals and volumes. It aims to fill the gap in the teaching resources and should promote further theoretical and empirical research in the subject.

Trade and investment for growth

This White Paper sets out the Government's strategy to meet the challenge of growing trade and investment. It puts forward an ambitious framework to do that based on the results of a government consultation conducted with business, academics and NGOs. It further explains how Ministers and officials across government should aim to create the best possible environment in the UK for trade and inward investment, and to deliver the practical support businesses need to trade and invest. It urges business people across the country to seize the opportunities presented by trade and international investment to innovate and build their businesses. It also sets out the ambition to work more intensively with the European Union and through bilateral relationships with countries around the world to shape an international environment that supports openness. The publication is divided into four chapters that cover the following topics: the case for open markets; opportunities for trade and investment growth; the UK's strategy for trade and investment growth; the trade and investment challenges.

Asian Development Experience Vol1

This book investigates the effects of Japan's foreign aid for development, trade and FDI in ASEAN economies from various perspectives, including: the historical implications of Japan's involvement; agricultural exports; the development patterns of the Southeast Asian economies; the formation of international production and distribution networks; poverty reduction; upgrading technology; and industrial agglomeration. The contributors analyse trade, FDI and foreign aid from the standpoint of policy coherence at the interface between development co-operation and many other policy areas: trade, agriculture, food safety, fisheries, intellectual property, the environment, international finance, tax policy, migration, and peace and security.

Beyond Economic Growth

What is development? How can we compare the levels of development attained by different countries? And what does it take to make development sustainable? This book offers no simple answers to these complex questions. Instead, the author encourages readers to seek their own solutions by analyzing and synthesizing information on a range of critical development issues including population growth, economic growth, poverty, education, health, trade, international aid, and the Millennium Development Goals. Drawing on data published by the World Bank, the book is addressed to young people, teachers, students, and all those interested in exploring issues of global development.

How Do Climate Shocks Affect the Impact of FDI, ODA and Remittances on Economic Growth?

The three main financial inflows to developing countries have largely increased during the last two decades, despite the large debate in the literature regarding their effects on economic growth which is not yet clear-cut. An emerging literature investigates the dependence of their effects on some country characteristics such as human and physical capital constraint, macroeconomic policy and institutional capacity. This paper extends the literature by arguing that climate shocks may undermine the effect of Foreign Direct Investment (FDI), official development assistance (ODA) and migrants' remittances on economic expansion. Based on neoclassical growth framework, the theoretical model indicates that FDI, ODA, and remittances improve economic growth, and the size of the effect increases with good absorptive capacity. However, climate shocks reduce this positive effect of financial flows in developing countries. Using a sample of low and middle-income countries from 1995 to 2018, the empirical investigation confirms the theoretical conclusions. Developing countries should build strong resilience to climate change. Actions are also needed at global level to reduce greenhouse gases emissions, and build strong structural resilience to climate shocks especially in developing countries.

World Investment Report

Globalization may be the most hotly debated issue surrounding poverty. The benefits and costs of global economic integration are critical and complex. Is a globalized, free-market economy part of the solution to economic injustice or part of the problem? Are the international monetary systems pursuing policies that will reduce poverty or are they serving the interests of the wealthy? What do pro-poor policy reforms look like in the areas of trade and foreign investment? What kinds of immigration restrictions or reforms are consistent with the Christian faith? Should development aid be awarded only to well-governed, democratic countries? Would unrestrained economic growth imply environmental destruction? Economic Justice assembles leading economists to debate these and other issues surrounding globalization's effects on the poor. Writers urge an informed church to help identify the essentials of a Christian perspective on the societal, environmental and economic implications of globalization and to live accordingly.

Economic Justice in a Flat World

This paper reviews the literature on migration within and from rural areas of Southeast Asia to examine the effects of redistribution of labor and remittances on livelihoods and land-use practices, as well as contexts in which migration drives, yet is also driven by, social and environmental change. Gaps in the literature and areas of contention and debate are highlighted, informing an agenda for further research. Many studies approach ways in which labor dynamics and remittances to rural villages affect agricultural productivity among migrant-sending households, or compensate for lost labor by supporting household consumption, but the reality is often found to be a combination of both on the basis of immediate priorities. Perceived returns to investments in both monetary and labor terms are critical to how migration influences household land-use decisions, while initially profitable investments and conducive local conditions are seen to enable successive enhancement and diversification of livelihoods. Overall, the expansive literature relating to migration and development often alludes to, yet stops short of, directly examining migration and remittance effects on land and forest cover change. The literature on land-use change often overlooks or briefly references migration, but migration rarely forms the central point of enquiry. Understanding of the linkages between migration and land-use can be strengthened through spatially situated studies in different geographical settings. Such studies would be better positioned to inform policies relating to land-use, agriculture and forestry in rural regions of Southeast Asia, where multi-local livelihoods are increasingly entwined with globalized processes, including those driving environmental changes that such policies seek to govern.

Reworking the land

This guide is designed to help teachers to prepare students for the rapidly arriving new world order through study of market economics and the global economy. The central section of the guide presents 10 case studies that describe a range of international economic concepts: (1) Debt and Oil; (2) Trade and Protection; (3) Foreign Exchange; (4) Foreign Direct Investment; (5) Migration and Immigration; (6) The International War on Drugs; (7) Four Asian Tigers; (8) The European Community; (9) The Soviet Union and Reform in Eastern Europe; and (10) International Aspects of Environmental Protection: Acid Rain, Greenhouse Effect. The guide also contains a survey of the world economy; a guide to international economic institutions; acronyms and a glossary; a note on measuring economic and population growth; world tables (economics and population); and a general bibliography. (DB)

International Economic Diplomacy

Globalization has become the focus for a wide range of protests against various features of the world economy. This paper aims to give a concise summary of the economic dimensions of globalization, while leaving to one side other aspects—such as cultural, environmental, or political ones—that are beyond the scope of the IMF. Periods of increased globalization have tended to be associated with technological innovations that reduce transportation and communications costs and with generally rising standards of living. Moreover, countries that have embraced openness to the rest of the world have done better than those that have not. Nevertheless, globalization may also be associated with increased inequality and volatility, which may justify strengthening domestic safety nets and financial supervision and regulation, and enhancing international economic policy coordination. The IMF helps to ensure economic gains from globalization by encouraging trade liberalization, reducing countries' vulnerability to crises, lending to them when they are in difficulty, and assisting them in putting in place structural reforms that help reduce poverty.

Globalization Facts and Figures

Provides a comprehensive review of the issues related to the impact of FDI on development as well as to the policies needed to maximise the benefits.

Foreign Direct Investment, Trade, Aid and Migration

Globalization and Development is a "cross-national study" on the "interstate dispersion" of the impacts (on growth, inequality and poverty) that international economic integration provides to the economies of the developing countries. In order to present the "Leading Issues in Development with Globalization" in a balanced manner, to identify differences and commonalities among "Country Experiences" in development with globalization, and to introduce diversified development paradigms with forward looking discussions "In Search of a New Development Paradigm" for the post-MDGs era, this publication consists of three volumes and four main parts. Volume I (Part I) introduces the evolution and facets of globalization, and the challenges that we face in our development efforts under globalization. Findings from the old and new empirical studies are consolidated for us to answer the following question. What do we really know about the impacts of globalization? Volume I (Part II) contains thematic and issue-oriented discussions on the key facets of globalization. This book intends to serve as a unique and comprehensive guide for those in the international development community on the subjects of diversified development paradigms/paths under globalization and other challenges in the post-MDGs era.

Foreign Direct Investment for Development Maximising benefits, minimising costs

This book applies a gendered lens to evaluate the dynamic linkages between climate change and livelihoods in developing countries. It examines how climate change affects women and men in distinct ways, and what the implications are for earning income and accessing the natural, social, economic, and political resources required to survive and thrive. The book's contributing authors analyze the gendered impact of climate change on different types of livelihoods, in distinct contexts, including urban and rural, and in diverse geographic locations, including Asia, Africa and the Caribbean. It focuses on understanding how public policies and power dynamics shape gendered vulnerabilities and impacts, how gender influences coping and adaptation mechanisms, and how civil society organizations incorporate gender into their climate advocacy strategies.

Globalization and Development Volume I

Globally, the volume of remittances to developing countries exceeds the development aid budgets. This volume explores the contribution of remittances to Africa's finances and provides concrete guidelines as to how these may be expanded. It contains essays by the field leaders in this area which record, review and revise our knowledge base on Africa's remittance patterns. The advent of new information communication technologies can contribute to an expanded capture of remittances from the African diaspora and in Africa new forms of money transfer are already taking shape which reflect this affordance. The volume also examines other resources, such as skills, that the African diaspora remits in its patterns of contact with Africa. The volume, shaped out of a conference on remittances and the African diaspora held at the Institute for African Development at Cornell University, is a timely reminder of the substantial role to be played in Africa's development by Africans themselves.

Gender, Climate Change and Livelihoods

International migration can have important impacts on development and it is important to develop appropriate and effective policy interventions that will help realize its full potential. This paper is intended to guide policymakers through challenges posed by migration and development. It is intended to be an accessible guide to the policy implications drawn from the burgeoning literature on migration and development. Its primary aim is to further the important and timely process of mapping out the policy options in this area, especially across the spectrum of channels that form the migration-development nexus

Africa's Finances

This book looks at the evidence and assesses the impact of competition among governments to attract FDI. It finds little evidence directly to support fears of a "global race to the bottom" in labour and environmental standards.

Migration and Development

Global Development and Human Security explores the possibility of connecting all countries to the global economy while defusing the social tensions and managing the security risks that can result from exposure to a turbulent international system. The complex intersection between security and development policies has not been adequately mapped or explored. Frail and failing states that lack sound market and security institutions are the weak links in an interconnected global system. Yet aid allocation principles discourage engagement with these "difficult partners," and the insular culture of development assistance hinders interaction with the security community. In a world beset by "problems without passport" (infectious diseases, environmental pollution, international crime, conflict spillovers, terrorism, etc.), a new paradigm should supplant the now obsolete development consensus. The authors took stock of current development practices through the prism of Sweden's Shared Responsibility bill, which addresses peace, security, opportunity, environmental conservation, human rights, and democracy. The resulting volume draws the implications of emerging threats to global peace and prosperity for development policy and practice. It seeks to build bridges of understanding between the development community and the security establishment by bringing together lessons of experience currently scattered in the literature. Each chapter is self-contained and includes policy findings and recommendations. The book is principally aimed at practitioners who need up-to-date knowledge about security and development issues. Publication of this paperback edition makes the book available for use as an introductory text for security specialists with little knowledge of development or for development specialists with limited knowledge of security, or for college or university students in these areas.

Policy Competition for Foreign Direct Investment

The Oxford Handbook of the Economics of Networks represents the frontier of research into how and why networks they form, how they influence behavior, how they help govern outcomes in an interactive world, and how they shape collective decision making, opinion formation, and diffusion dynamics. From a methodological perspective, the contributors to this volume devote attention to theory, field experiments, laboratory experiments, and econometrics. Theoretical work in network formation, games played on networks, repeated games, and the interaction between linking and behavior is synthesized. A number of chapters are devoted to studying social process mediated by networks. Topics here include opinion formation, diffusion of information and disease, and learning. There are also chapters devoted to financial contagion and systemic risk, motivated in part by the recent financial crises. Another section discusses communities, with applications including social trust, favor exchange, and social collateral; the importance of communities for migration patterns; and the role that networks and communities play in the labor market. A prominent role of networks, from an economic perspective, is that they mediate trade. Several chapters cover bilateral trade in networks, strategic intermediation, and the role of networks in international trade. Contributions discuss as well the role of networks for organizations. On the one hand, one chapter discusses the role of networks for the performance of organizations, while two other chapters discuss managing networks of consumers and pricing in the presence of network-based spillovers. Finally, the authors discuss the internet as a network with attention to the issue of net neutrality.

Global Development and Human Security

This edition analyses how trade can contribute to economic diversification and empowerment, with a focus on eliminating extreme poverty, particularly through the effective participation of women and youth. It shows how aid for trade can contribute to that objective by addressing supply-side capacity and trade-related infrastructure constraints, including for micro-, small- and medium-sized enterprises notably in rural areas.

The Oxford Handbook of the Economics of Networks

This open access textbook provides an introduction to theories, concepts and methodological approaches concerning various facets of migration and migration-related diversities. It starts with an

introduction to migration studies and continues with an introductory reading of migration drivers, migration infrastructures, migration flows, and several transversal topics such as gender and migration. It also covers politics, policies and governance as well as specific research methods. As an interactive guide, this book develops an innovative format that brings a connection with various online sources. This means that whereas the chapters bring together literature in a coherent way, they are also connected to IMISCOE's online interactive Migration Research Hub for further reading and for more empirical material on migration and diversity. As such, this textbook provides a very useful introductory reading for undergraduate and graduate students as well as for policymakers, policy advisors, and all those interested in studies on migration and migration-related diversities.

Übersicht über die Migration und Diversität 1997-2021

"The ongoing COVID-19 pandemic marks the most significant, singular global disruption since World War II, with health, economic, political, and security implications that will ripple for years to come." -Global Trends 2040 (2021) Global Trends 2040-A More Contested World (2021), released by the US National Intelligence Council, is the latest report in its series of reports starting in 1997 about megatrends and the world's future. This report, strongly influenced by the COVID-19 pandemic, paints a bleak picture of the future and describes a contested, fragmented and turbulent world. It specifically discusses the four main trends that will shape tomorrow's world: - Demographics-by 2040, 1.4 billion people will be added mostly in Africa and South Asia. - Economics-increased government debt and concentrated economic power will escalate problems for the poor and middleclass. - Climate-a hotter world will increase water, food, and health insecurity. - Technology-the emergence of new technologies could both solve and cause problems for human life. Students of trends, policymakers, entrepreneurs, academics, journalists and anyone eager for a glimpse into the next decades, will find this report, with colored graphs, essential reading.

Aid for Trade at a Glance 2019 Economic Diversification and Empowerment

This Handbook provides a state-of-the-art analysis of the critically important links between migration and security in a globalising world, and presents original contributions suggesting innovative and emerging frontiers in the study of the securitization of migration. Experts from different fields reflect on their respective conceptualisations of the migration-security nexus, and consider how an interdisciplinary and multifaceted dialogue can stimulate and enrich our understanding of the securitisation of migration in the contemporary world.

Les Sociétés Transnationales

Presents the emerging principle of Common Concern of Humankind as legal response and to serious collective action crises.

Introduction to Migration Studies

"Issues on Global Governance" contains the Expert Papers of the Commission on Global Governance. The Commission is concerned primarily with furthering global cooperation (i.e. coordinated multilateral action) to meet the challenge of securing peace, achieving sustainable development and universalizing democracy'. The Expert Papers have been written especially for the Commission's Working Groups (One: Global Values; Two: Security; Three: Development; Four: Governance) by authorities in the field (viz. Abi-Saab, Galtung, Haas).

Global Trends 2040

Gradual and sudden environmental changes are resulting in substantial human movement and displacement, and the scale of such flows, both internal and cross-border, is expected to rise with unprecedented impacts on lives and livelihoods. Despite the potential challenge, there has been a lack of strategic thinking about this policy area partly due to a lack of data and empirical research on this topic. Adequately planning for and managing environmentallyinduced migration will be critical for human security. The papers in this volume were first presented at the Research Workshop on Migration and the Environment: Developing a Global Research Agenda held in Munich, Germany in April 2008. One of the key objectives on the Munich workshop was to address the need for more sound empirical research and identify priority areas of research for policy makers in the field of migration and the environment.

Handbook on Migration and Security

"This book describes China's growing range of activities in Africa, especially in the sub-Saharan region. The three most important instruments China has at its disposal in Africa are development aid, investments and trade policy. The Chinese government, which believes the Western development aid model has failed, is looking for new forms of aid and development in Africa. China's economic success can partly be ascribed to the huge availability of cheap labour, which is primarily employed in export-oriented industries. China is looking for the required raw materials in Africa, and for new marketplaces. Investments are being made on a large scale in Africa by Chinese state-controlled firms and private companies, particularly in the oil-producing countries (Angola, Nigeria and Sudan) and countries rich in minerals (Zambia). Third, the trade policy China is conducting is analysed in China and compared with that of Europe and the United States. In case studies the specific situation in several African countries is examined. In Zambia the mining industry, construction and agriculture are described. One case study of Sudan deals with the political presence of China in Sudan and the extent to which Chinese arms suppliers contributed to the current crisis in Darfur. The possibility of Chinese diplomacy offering a solution in that conflict is discussed. The conclusion considers whether social responsibility can be expected of the Chinese government and companies and if this is desirable, and to what extent the Chinese model in Africa can act as an example - or not - for the West"--Publisher's description.

The Prospects of Common Concern of Humankind in International Law

Includes statistics.

United Nations Publications

In recent years, several influential commentators have stated or strongly implied that the advanced industrial democracies are today being overwhelmed by a host of problems - including rapid population growth, the breakup of multi-ethnic states, environmental degradation, and increasing economic differentials between the "developing" and "developed" worlds - for which no effective solutions are at hand. The migration-inducing potential of these post-Cold War developments has been a particular source of concern. This volume provides a counter-catastrophic view of developments and a more sober and balanced assessment of the challenges the United States and other industrial democracies face in the sphere of international migration than that offered in recent years. The first part is devoted to a diagnosis of the problem, revaluation of the notion of a "migration crisis" by examining the likely consequences of population growth, environmental degradation, and political conflict in the developing and post-communist worlds. Special attention is also given to the manifestations of these forces in the western hemisphere where they may have direct consequences for immigration to the United States. In the second part the implications for U.S. policy are considered, ranging from promotion of democracy and development of strategies for minimizing international migrations and refugee flows to the intricacies of humanitarian relief and intervention when preventive measures prove ineffective.

International Economics

Switzerland is facing critical foreign policy challenges. Its relationship with the EU is still unsettled, the geopolitical landscape is changing rapidly, and technological innovation brings additional dynamics into play. This book provides a forward-looking guide for all those concerned with Swiss foreign policy issues, and an overview of Swiss foreign policy along its key areas. It deals, for example, with foreign trade, international financial markets, migration, environmental policy, humanitarian cooperation, and peace promotion and security policy. The contributions are written by academics and practitioners. They shed light on the respective global or regional context in which Switzerland's foreign policy operates, and analyze achievements, challenges, opportunities, and risks as well as potential ways forward. Published on behalf of the Swiss Society for Foreign Policy. With forewords by Foreign Minister Ignazio Cassis and National Councilor Christa Markwalder, President of the Swiss Society for Foreign Policy, and contributions by: Thomas Bernauer, Fritz Brugger, Aymo Brunetti, Gilles Carbonnier, Francis Cheneval, Cedric Dupont, Katja Gentinetta, Isabel Gunther, Paula Hoffmeyer-Zlotnik, Joelle Kuntz, Sandra Lavenex, Philipp Lutz, Matthias Oesch, Pascal Sciarini, Charlotte Sieber-Gasser, Cedric Tille, Andreas Wenger, Achim Wennmann, Sacha Zala. The German version of «A Swiss Foreign Policy for the 21st Century» is available as «Eine Aussenpolitik für die Schweiz im 21. Jahrhundert».

Issues in Global Governance

Foreign Direct Investment Statistics: How Countries Measure FDI shows progress in recent years in moving toward compilation in accordance with international standards that have been established by the International Monetary Fund (IMF) and the ...

Migration, Environment and Climate Change

The ASEM process began in March 1996 with the first Asia–Europe Meeting in Bangkok. It brings together the Heads of State or Government of 10 Asian countries and of the 15 Member States of the EU, along with the President of the European Commission. The initial Asia–Europe summit set in motion a process involving summit-level meetings every second year, ministerial meetings in between and more frequent meetings at the senior-official, working and expert level. The second ASEM summit was held in London in April 1998 and the third in Seoul in October 2000. The fourth summit will be held in Denmark in September 2002. The core ministerial meetings of the ASEM process (foreign affairs, economics and finance) normally take place every year; this year additional meetings of ministers of science and technology, environment and migration have been organised. The ASEM process was founded on the mutual recognition, in Asia and in Europe, that relations between our two regions needed to be strengthened, to reflect the increased importance of Asia on the world stage. The ASEM process reflects our evolution from an ‘aid and trade’ relationship, towards a more balanced and equal partnership. The Commission had already pointed to the need for a new partnership in its Asia strategy of July 1994, shortly before Singapore’s suggestion in November 1994 that an Asia–Europe summit be considered. The importance attached to ASEM has recently been confirmed in the ‘New Asia’ strategy, published in September 2001.

The New Presence of China in Africa

While many countries may embrace globalization at the conceptual level, the specifics of implementation vary greatly from country to country. This book includes diverse narratives which suggest how to limit globalization's negative aspects and ensure constructive engagement in the global community.

The Migration-development Nexus

Global Migrants, Global Refugees
