GPAT/DI PREVIOUS YEARS PAPERS UPTO 2019 AVAILABLE IN THIS BOOK GPAT/NIPER-JEE/ DRUG INSPECTOR PREPARATION TIPS AS PER VARIOUS SUBJECTS

Cracking GPAT was easier when it used to be conducted with GATE by the IITs earlier. It was very much templated and there were certain set pieces of questions which were repeated every year. However, now the level of unpredictability has increased in the exam. That is why students should study all topics thoroughly. The preparation tips candidates can use for each section are given below:

Pharmacognosy This is a very theoretical section. Applicants must read the chapters comprehensively and make micro notes based on it. These micro notes can help in last minute revision. From the analysis of previous years' exam papers, it can be seen that the most asked drugs from this section are Senna, Morphine and Vinca rosa. Individuals must study all the concepts of these drugs; understand their mechanisms and their effects & uses. It is best to devote recurrent time periods to Pharmacognosy so that candidates do not forget the concepts and details. Important topics in this section are - *Glycosides* *Alkaloids* *Volatile Oils* *Resins* *Tannins* *Carbohydrates* *Tissue culture* *Herbal drugs

Recommended books for Pharmacognosy: *Pharmacognosy by C K Kokate* *The complete guide for Pharmacognosy by Trease and Evans

Pharmacology Many students find this section very interesting. Topics from this section carry a lot of weightage in GPAT. Aspirants must study drug interaction and mechanisms as well as unique side effects of drugs (not general side effects like body pain). For the chapter of Classification of drugs, candidates can use acronyms to remember the names. For eg: 1. Semisynthetic derivatives: Atropine Methonitrate, Homatropine, Hyoscine butyl bromide, Ipratropium bromide, Tiotropium Bromide (AHITH) 2. Quaternary compounds: Propantheline, Clidimium, Oxyphenonium, Pipenzolate methyl bromide, Isopropamide, Glycopyrrolate (PCO PIG) Important topics in this section are: *Oncology (drugs for chemotherapy, upcoming technologies, etc.) *Neuropharmacology and rare diseases *Cardiovascular and Blood products

Recommended books: *Essential of Medical Pharmacology by K D Tripathi

The author of this book is 2 times GPAT qualified

KD Tripathi's MCQs in Pharmacology

Experts estimate that as many as 98,000 people die in any given year from medical errors that occur in hospitals. That's more than die from motor vehicle accidents, breast cancer, or AIDS—three causes that receive far more public attention. Indeed, more people die annually from medication errors than from workplace injuries. Add the financial cost to the human tragedy, and medical error easily rises to the top ranks of urgent, widespread public problems. *To Err Is Human* breaks the silence that has surrounded medical errors and their consequence—but not by pointing fingers at caring health care professionals who make honest mistakes. After all, to err is human. Instead, this book sets forth a national agenda—with state and local implications—for reducing medical errors and improving patient safety through the design of a safer health system. This volume reveals the often startling statistics of medical error and the disparity between the incidence of error and public perception of it, given many patients' expectations that the medical profession always performs perfectly. A careful examination is made of how the surrounding forces of legislation, regulation, and market activity influence the quality of care provided by health care organizations and then looks at their handling of medical mistakes. Using a detailed case study, the book reviews the current understanding of why these mistakes happen. A key theme is that legitimate liability concerns discourage reporting of errors—which begs the question, "How can we learn from our mistakes?" Balancing regulatory versus market-based initiatives and public versus private efforts, the Institute of Medicine presents wide-ranging recommendations for improving patient safety, in the areas of leadership, improved data collection and analysis, and development of effective systems at the level of direct patient care. *To Err Is Human* asserts that the problem is not bad people in health care—it is that good people are working in bad systems that need to be made safer. Comprehensive and straightforward, this book offers a clear prescription for raising the level of patient safety in American health care. It also explains how patients themselves can influence the quality of care that they receive once they check into the hospital. This book will be vitally important to federal, state, and local health policy makers and regulators, health professional licensing officials, hospital administrators, medical educators and students, health caregivers, health journalists, patient advocates—as well as patients themselves. First in a series of publications from the Quality of Health Care in America, a project initiated by the Institute of Medicine

To Err Is Human

The examinations of the present era are becoming tough nuts to crack with the rise of every Sun on the academic horizon of the world. The tests related to General Mental Ability have also received greater attention of papersetters. Thus, these tests would be more difficult in test session commencing from 2002 AD. We, at RPH, decided to give an edge to the candidates such examinations. We worked hard for more than a year on the manuscript of this volume. What finally turned out to be, was a systematic and neatly planned compendium, exclusively dedicated to general mental ability tests. Students preparing of entrance test and competitive examination of MBA, CDS, NDA, CAT, MAT, CMAT, RRB, SCRA, SBIPO, SSC EXAMS, UPSC, GMAT, GINDOMAT, IBPSCWE, B.Ed. etc., would find it to be a boon for themselves. This systematic study and practice will help them succeed in their examinations. On behalf of publishers, we wish you all the best for your forthcoming examinations.

Scores of talented and dedicated people serve the forensic science community, performing vitally important work. However, they are often constrained by lack of adequate resources, sound policies, and national support. It is clear that change and advancements, both systematic and scientific, are needed in a number of forensic science disciplines to ensure the reliability of work, establish enforceable standards, and promote best practices with consistent application. Strengthening Forensic Science in the United States: A Path Forward provides a detailed plan for addressing these needs and suggests the creation of a new government entity, the National Institute of Forensic Science, to establish and enforce standards within the forensic science community. The benefits of improving and regulating the forensic science disciplines are clear: assisting law enforcement officials, enhancing homeland security, and reducing the risk of wrongful conviction and exoneration. Strengthening Forensic Science in the United States gives a full account of what is needed to advance the forensic science disciplines, including upgrading of systems and organizational structures, better training, widespread adoption of uniform and enforceable best practices, and mandatory certification and accreditation programs. While this book provides an essential call-to-action for congress and policy makers, it also serves as a vital tool for law enforcement agencies, criminal prosecutors and attorneys, and forensic science educators.
