roll down this incline two cylinders

decompose that into one along the slope

the moment of inertia

take a hollow cylinder

the hollow cylinder will lose

start with a very heavy cylinder

mass is at the circumference

put the hollow one on your side

put a torque on this bicycle wheel in this direction

torque it in this direction

give it a spin in your direction

spinning like this then the angular momentum of the spinning wheel is in this

apply a torque for a certain amount of time

add angular momentum in this direction

stopped the angular momentum of the system

apply the torque in this direction

rotate it in exactly the same direction

move in the horizontal plane

spin angular momentum

a torque to a spinning wheel

give it a spin in this direction

spinning in this direction angular momentum

move in the direction of the torque

rotating with angular velocity  $\omega$  of s

the angular momentum

increase that spin angular momentum in the wheel

suppose you make the spin angular momentum zero

gave it a spin frequency of five hertz

redo the experiment changing the direction of rotation

turning it over

changed the direction of the torque

increase the torque by putting some weight here on the axle

change the moment of inertia of the spinning wheel  
make it a little darker  
putting it horizontally and hanging it in a string  
put the top on the table  
put a torque on the axis of rotation of the spinning wheel  
put a torque on the spinning wheel  
putting some weights on the axis  
start to change the torque  
change the direction of the torque
