Esthetician Practice Written Test 9 - Esthetician Practice Written Test 9 by Glam And Beyond 37,845 views 1 year ago 13 minutes, 1 second - Take the 25 question **practice test**, , to **quiz**, yourself , and better prepare yourself for the **Esthetician**, written **exam**,. Hope this helps !

Intro

What is erythema? A. Redness caused by inflammation B. Pain caused by inflammation C. Dryness caused by inflammation D. Oiliness caused by inflammation

What is excoriation? A. Common side effect of blood thinning medication B. Type of contagious fungal infection C. Skin sore or abrasion produced by scratching or scraping D. Lesion caused by an allergic reaction

What is a fissure? A. crack in the skin that penetrates the dermis B. Another name for a follicle C. A mole

What is true of Herpes Simplex 1? A. It is a terminal condition

What is the common name for the painful viral infection herpes zoster? A. Pinkeye B. Ringworm

What is hyperhidrosis? A. Insufficient perspiration B. Sweet smelling perspiration C. Excessive hair growth D. Excessive perspiration

What skin type is associated with the treatment goals of maintenance and preventative care?

What skin type is associated with the treatment goals of using occlusive products to reduce transepidermal water loss? A. Dry

What skin type is associated with the treatment goals of extra cleansing and exfoliating?

What skin type is associated with the treatment goals of soothing, and protecting? A. Dry B. Sensitive C. Normal

Where on the face of a client with combination skin are the follicles medium to large? A. On the nose B. Outside the t- zone on the cheeks C. On the forehead D. On the chin

What does the Fitzpatrick scale measure? A. Skins ability to tolerate sun exposure B. Skins ability to recover from infections C. Skins ability to tolerate water exposure D. Skins ability to absorb products

What does the term "keratosis" refer to? A. Area with insufficient cells B. Acne caused by poor skin care C. Abnormally thick buildup of cells D. Bruise cause by injury

What are botanicals made from? A. Animal fats

What skin type ages more slowly than the other types?

What term refers to skin freshening lotions with a low alcohol content? A. Conditioners B. Fresheners C. Moisturizers D. Serums

What term refers to an exfoliating cream mask, that is rubbed off the skin? A. Emulsifier B. Humectant C. Paraben

What are hydrators? A. ingredients that repel water from the skin surface.

What is not true of benzoyl peroxide? A. It is commonly used for blemishes B. It is a type of alpha hydroxy acid C. It is commonly used for acne D. it is a drying agent

What products coat the skin and reduce friction?

What is not a natural source of salicylic acid? A. Jojoba B. Willow bark C. Sweet birch

What type of LED light is used to treat acne?

What is the term for a brown or wine-colored discoloration? A. Wen

What is a small blister or sac containing clear fluid? A. Vesicle B. Carbuncle C. Wen

What is another term for varicose veins? A. Secondary lesions B. Primary lesions C. Foreign lesions D. Vascular lesions

Study Guide, #1 Infection Control, Anatomy Physiology, ...

What is decontamination ? Explain the three levels of decontamination -Decontamination is the removal of pathogens and other substances from tools and surfaces. The three levels are: • Sterilization, High level, completely destroy every organism on a surface, usually by the use of an Autoclave. • Disinfection, second level does not kill bacterial spores but controls microorganism on hard nonporous surfaces such as cuticle nippers/extracting tools and other salon implements. By the use of an approved disinfectant. Sanitation / Cleaning, third lowest level, reduce the number of pathogens or disease producing organism found on a surface by scrubbing with a brush and washing with soap and water.

What is efficacy and why is it important? -Efficacy, the power to produce an effect, means the effectiveness of a product against bacteria, fungi and viruses. An efficacy standard on a product label tells you which bacteria will be effectively destroyed by the product being used.

List at least six precautions to follow when using disinfectants. 1. Wear gloves and safety glasses 2. Add disinfectant to water, never add water to the disinfectant 3. Keep away from children 4. Use tongs, gloves or draining baskets when removing implements from disinfectants. 5. Dont pour quats, phenols and others like over hands 6. Never place in unmarked container

What are Universal precautions? A set of guidelines and controls, published by the Centers of Diseases Control and Prevention (cdc) that requires the employer and the employee to assume that all human blood and specified human body fluids are infectious for HIV, HBV and other blood borne pathogens. Universal precautions include hand washing, gloving, personal protective equipment, injury prevention, proper handling and disposal of needles, other sharp instruments and products that have been contaminated by blood or other body fluids.

List and describe the functions of the five types of tissue found in the human body. Connective tissue : supports, protects, and binds together other tissues of the body, examples are bone, cartilage, ligament, tendon, fascia which separate muscles and fat or adipose tissue. - Epithelial tissue protective covering on body surface such as the skin, mucous membranes, linings of the heart, digestive and respiratory organs and glands Liquid tissue carries food, waste products and hormones by means of the blood and lymph. - Muscular tissue: Contracts and moves various parts of the body. -Nerve tissue: Carries messages to and from the brain, and controls and coordinates all body functions.

List and describe the functions of the main organs found in the body. Brain: controls the body Eyes: control vision - Heart: circulates the blood -Kidneys: excrete water and waste products Lungs: supply oxygen to the blood - Liver: removes toxic products of digestion - Skin: forms external protective covering of the body - Stomach and Intestines: aid in digestion of food

Name and describe the three types of nerves found in the body. - Sensory nerves: carry impulses or messages from the sense organs to the brain, where sensations such as touch, cold, experienced; called receptors and are located at the surface of the skin. - Motor Nerves: carry impulses from the brain to the muscles

Name and discuss the two types of glands found in the human body. - Exocrine or duct glands: produce a substance that travels through small tube like ducts; include sweat and oil glands of the skin and intestinal glands. - Edocrine or ductless glands: release secretions called hormones directly into the bloodstream, which in turn influence the welfare of the entire body.

What is chemistry? Chemistry is the science of the structure and properties of matter and its changes.

What are atoms? Atoms are the structural units of the elements that make up all matter. An atom is the smallest particle of an element that retains the properties of that element.

What are elements? Elements are substances that cannot be separated into simpler substances by ordinary chemical means.

What are Physical and Chemical properties of matter? Physical properties are those characteristics that can be determined without a chemical reaction and without a chemical change in the identity of the substance. Physical properties and hardness.

Define pH and the pH scale. pH refers to the relative degree of acidity and alkalinity of a substance. The pH values range from 0 to 14. A pH of 7 indicates a neutral solution, a pH below 7 indicates an acidic solution, and a pH above 7 indicates an alkaline solution.

Describe the two types of electric current. - Direct current: constant, even flow current that travels in one direction only and produces a chemical reaction. (Ex. Flashlights, cameras, remotes) - Alternating current: rapid and interrupted current, flowing first in one direction and then in the opposite direction. (Ex. Hairdryers, refrigerators, curling irons.)

List the four main types of electrical measurements. What do they measure? - Volt : Measures the pressure or force that pushes the flow of electrons forward through a conductor - amp: Measures the strength of an electric current - ohm: Measures the resistance of an electric current - Watt: Measures how much electric energy is being used in one second

Esthetician Practice Written Test #5

What form of decontamination is NOT recommended for use in salons or spas.

What three qualities must disinfectants use in salons, spas, and medical facilities have?

What type of tissue gives smoothness and contour to the body?

4. Where should you apply paraffin wax to test its temperature?

5. When should the Dr. Jacquet movement be performed as part of a facial treatment?

What should you do when performing a standard relaxing massage?

What is considered to be the most important machine used in esthetics?

What are the two common types of electrodes used with the galvanic machine?

What does cataphoresis do?

What color light should appear when using the large mushroom electrode or high frequency machine on normal to oily skin?

What is the average rate of cell turnover for those 50 and older?

What type of LED light is used for rejuvenation?

What condition is a contraindication for microcurrent?

What is the most common form of cheek color?

15. What two forms do makeup removers come in?

What should you do to the eyebrows to create the illusion of a shorter face for a client with a long

face?

Where on the eye should you start when removing artificial eyelashes?

What class of medical devices are lasers and intense pulsed light (IPL) machines?

During what phase of hair growth should hair be removed for the MOST effective long-term hair reduction?

What can the vacuum machine be used in place of during a facial service?

What type of product should you recommend for male clients?

What is a treatment goal for mature skin?

What part of the body are usually bare for facials?

What step comes next after softening the clients skin with steam or warm towels when performing a basic facial?

How far should the steamer nozzle be held from the clients skin?

What is the characteristic feature of seborrhea?

What is an example of a single-use item?

What should you use to remove implements from the disinfectant solution container?

50. How long does it typically take to clean up after a service?
