Clinical Pediatric Oncology

This comprehensive clinical handbook for nurses in paediatric haematology/oncology, contains in-depth information regarding patho-physiology, diagnosis, treatment, advanced assessment and interventions.

Clinical Pediatric Oncology

Childhood cancer was almost always fatal before 1970. Today, 80% of children diagnosed with cancer will survive at least 5 years; 70% will be cured. However, cancer continues to be the leading cause of nonaccident-related deaths in children. More children die each year from cancer than from cardiac disease, diabetes, asthma, AIDS, and congenital abnormalities combined. Nine children die from cancer every school day. Despite the fact that pediatric cancers account for only a small percentage of the total cancer burden, more effective therapies are needed to improve mortality rates in children. Therefore, our research priority must be the development of new agents and new therapies for childhood cancer. M. D. Anderson Cancer Center has been caring for children with cancer since its doors opened over 60 years ago. This institution has been home to several research and clinical pioneers whose innovative work has influenced and shaped the practice of pediatric oncology throughout the world. Notably, Drs. Wataru W. Sutow, Donald Pinkel, and Norman Jaffe have been credited with introducing curative therapies for children with leukemia and solid tumors. Cancer treatment involves far more than administering chemotherapy and surgically excising tumors. It requires a multidisciplinary approach to patient management, particularly in the treatment of solid tumors, which pose the biggest challenge in cancer care today. Surgery and radiotherapy as well as radiographic and pathologic assessments of response are critical factors in the treatment of children with cancer.

Pediatric Oncology Nursing

This book is a comprehensive guide to paediatric oncology for trainees and practising clinicians. Beginning with an introduction to epidemiology and cytogenetics, the following chapters discuss different varieties of childhood cancer, covering their etiology, classification, clinical features, diagnosis, treatment and prognosis. The book then examines issues such as imaging, radiation therapy, oncologic emergencies, stem cell transplant, palliative care, and cancer vaccines. The final chapters include discussion on evidence-based paediatric oncology practice, taken from The Cochrane Library (a collection of six databases that contain different types of high-quality, independent evidence to inform healthcare decision-making – www.thecochranelibrary.com), as well as Frequently Asked Questions from a parent's perspective. Key points Comprehensive guide to paediatric oncology Covers diagnosis and treatment of numerous varieties of childhood cancer Discussion on evidence-based practice from The Cochrane Library Includes FAQs from a parent's perspective

Clinical Pediatric Oncology

This book presents the current state of the nursing science in topics relevant to the care of pediatric oncology patients and their families across the treatment trajectory and is framed within a precision health framework. The spectrum of topics covered is wide, including, for example, symptom management, self-care management, exercise and physical activity, family-centered care, palliative care, the role of the nurse in treatment decision making, patient and nurse resiliency, survivorship, and genetic counseling. Throughout, there is a focus on the implications of research for nursing practice, highlighting which elements of the available evidence are ready for translation into practice and which are not. In addition, careful attention is paid to the role that nursing can play in further advancing science through clinical research. The authors are leading experts from across the globe. The book will be of special interest for pediatric oncology nurses, including direct care nurses, research nurses, and nursing leaders, and will also be a stimulating source for researchers and non-oncology nurses.

Essentials of Pediatric Oncology

With the fall in mortality from infectious diseases, the impact of childhood cancer in the Western World has increased to become the second commonest cause of death in the age group 1-14 years, being surpassed only by accidents. However, even in those countries in which paediatric cancer is attracting increasing interest, the disease is relatively uncommon, and the number of cases seen by any one physician, even in a large general hospital, is often limited to one or two a year. The widely

held view by parents and even by many doctors that cancer in childhood is usually untreatable and inevitably fatal is no longer tenable. With improvement in the therapeutic response or in the actual survival rates of children with such lesions as Wilms' tumour, brain tumours, rhabdomyosarcomas, Ewing's sarcoma, retinoblastoma, lymphoma and even leukaemia, there is a real hope of achieving a substantial reduction in the mortality of childhood cancer. Paediatric oncology is, in fact, providing a vigorous stimulus to the much wider field of cancer treatment and research, and is demonstrating the advantages of a multi-disciplinary cooperation in the management of this disease.

Principles and Practice of Pediatric Oncology

There are few publications about chemotherapy in children, and none of them is a book aimed at pharmacists. Pediatric Oncology Pharmacy is an area where more and more specific knowledge is required in daily practice. Pharmacists who work in pediatric oncology area do not have a book directed at them; none of the oncopediatric books addresses topics unique to pharmacy — such as manipulation of cytotoxic drugs for children, analysis of oncopediatric prescriptions, clinical pharmacy in oncopediatrics, pharmaceutical care in oncopediatric area, and other subjects that are of exclusive interest to these professionals, but no less essential for a therapy of excellence. As for this need, the purpose of this book is to be a guideline for all subjects that pediatric oncology pharmacists need to know to work in this area. It will be an essential guide to pediatric oncology pharmacists, clinical pharmacists, pharmaceutical residents who work with drug therapy in children and pharmaceutical researchers. It will be a pocket guide to assist in daily practice, and it will be essential to Pediatric Oncology/ Hematology Institutions. The essential purpose of this book is to be the first one focusing pediatric oncology for pharmacists.

Cancer in Children

Like the ground-breaking first edition, *Pediatric Psycho-oncology*, Second edition puts the child at the centre of medical and psychological care. It broadens the focus beyond treatment and cure to consider the quality of life of the child and their family. Written by an international group of pediatric oncologists and psychologists/psycho-oncologists brought together by an expert editorial team, it focuses on the real-life practical aspects of children undergoing treatment for cancer. This edition has been restructured and opens with a major section on Active treatment, which includes chapters addressing quality of life, pain, psychosocial aspects of treatment and interventions, art therapy and different fantasy-based techniques, palliative care, communication and education, as well as a new chapter on psychopharmacology. Shorter sections then discuss survivorship and care of the dying child, including a new chapter on bereavement. The final section comprises new chapters on ethical considerations and on addressing the emotional needs of children whose parents have cancer, as well as a case study on international collaboration. An appendix provides a comprehensive overview of tools for evaluation and assessment.

in pediatric psychooncology. This book is a highly practical resource that will be invaluable for all health care professionals looking after children and adolescents with cancer.

Pediatric Oncology Nursing

Pediatric Radiation Oncology, Sixth Edition continues to be the premier reference that offers comprehensive coverage of this challenging area for the radiation oncologist in training or practice, medical radiation physicists and dosimetrists, as well as pediatric oncologists and others interested in understanding childhood malignancies. This definitive text has been completely updated to reflect recent advances in the field. Manageable in size and engaging to read, it efficiently synthesizes data on pathogenesis, pathology, diagnostic workup, staging, treatment approaches (particularly radiation therapy—indications, doses, volumes, and treatment planning), and toxic outcomes, as well as guidance on decision making when data is lacking. For 30 years, this standard reference has helped demystify radiation therapy for childhood cancer and contributed to the quality and quantity of life for children affected by this disease.

Cancer in Children

This new textbook has an international authorship and is a practical, up-to-date resource for clinicians responsible for the care of children with oncologic and malignant hematologic disease. It is specifically designed for practicing oncologists and hematologists, pediatricians with an interest in childhood cancer and trainees seeking a systematic approach to these disorders. This new textbook has an emphasis on the visual presentation and ease of reading of contemporary and comprehensive information for children's cancers and contains detailed tables, fact boxes and illustrations. The textbook begins with an introduction to the general principles of the scientific foundation and treatment of childhood cancers and hematological malignancies. Separate sections are then devoted to descriptions of central nervous system tumors, hematological malignancies and solid tumors of childhood which encompass epidemiology, cellular and molecular biology, cancer genetics, immunology, pharmacology and the findings of clinical trials. For each area of science covered, key original references and reviews are highlighted to direct further reading. Diagnostic, biological, and therapeutic issues are integrated into each tumor-specific chapter, with evidence supporting the current rationales for risk stratification and the development of novel therapies. A final section then explores supportive care, palliative care, late effects considerations and psychosocial issues as relate to children's cancer.

Principles and Practice of Pediatric Oncology

This book is updated with evidence from the latest published reviews and is more clinically focused, with an emphasis on application of the trial findings. With increased coverage of trials in the area of supportive care for pediatric cancer patients, each chapter opens with a clinical question and concludes with a summary on the trial findings from an expert commentator.

Pediatric Oncologic Pharmacy

This work covers the aetiology, symptoms and treatment of cancer in children, featuring contributions from leading experts on the subject. The edition includes several new chapters on future trends in chemotherapy, surgery, palliative care and myeloid leukaemia.

Pediatric Psycho-oncology

The purpose of *Diagnostic and Therapeutic Advances in Pediatric Oncology for the Cancer Treatment and Research Series* is to provide an up-to-date summary of how recent advances in cancer research are being applied to the care of children with solid tumors. The interface of cancer research with clinical practice in pediatric oncology has never been more intimate than today. While researchers are identifying oncogenes and tumor suppressor genes and are studying their specific functions, clinicians are using knowledge of oncogenes and tumor suppressor genes for diagnosing cancer in children, for therapeutic decision-making purposes, and for prognostic purposes. The first three chapters in this book describe models for understanding the causes of childhood cancer that were perhaps initially identified by clinicians and that are now being studied and understood by researchers. These chapters will describe research evidence that supports roles for the involvement of normal developmental regulatory genes in childhood oncogenesis, of abnormal immune regulation in childhood oncogenesis, and of heredity in childhood oncogenesis. The next eight chapters are devoted to descriptions of the

application of new research developments to clinical practice with reference to the most common forms of solid tumors of childhood outside the central nervous system. The final chapter will describe late effects of childhood cancer and its therapy and the impact research is having on understanding and perhaps preventing these late effects.

Pediatric Radiation Oncology

Fully revised and updated for its second edition, *Paediatric Haematology and Oncology* provides an easily accessible source of information about all of the basic principles of childhood cancer and leukaemia, and detailed specialist knowledge on how to care for children with those conditions. Featuring new chapters on the biology of childhood leukaemia and central nervous system tumours, the book includes a greater focus on the rapidly expanding research in the biology and genetics of childhood malignancy, as well as new clinical treatments and more detail on various tumour types. Logically split into 12 sections on different aspects of haematology and cancer to allow quick and easy reference, the book provides general principles of diagnosis and treatment, short- and long-term care, and oncological emergencies, before moving on to chapters on specific diseases. Normal values and useful websites are also included for reference. Chapters have been expanded to feature more clinical images to aid in diagnosis and interpretation, making this second edition an invaluable companion for the trainee and consultant in paediatric haematology and oncology.

Paediatric Oncology

To address the growing complexities of childhood cancer, Nathan and Oski's *Hematology and Oncology of Infancy and Childhood* has now been separated into two distinct volumes. With this volume devoted strictly to pediatric oncology, and another to pediatric hematology, you will be on the cutting edge of these two fields. This exciting new, full-color reference provides you with the most comprehensive, authoritative, up-to-date information for diagnosing and treating children with cancer. It brings together the pathophysiology of disease with detailed clinical guidance on diagnosis and management for the full range of childhood cancers, including aspects important in optimal supportive care. Written by the leading names in pediatric oncology, this resource is an essential tool for all who care for pediatric cancer patients. Offers comprehensive coverage of all pediatric cancers, including less common tumors, making this the most complete guide to pediatric cancer. Covers emerging research developments in cancer biology and therapeutics, both globally and in specific pediatric tumors. Includes a section on supportive care in pediatric oncology, written by authors who represent the critical subdisciplines involved in this important aspect of pediatric oncology. Uses many boxes, graphs, and tables to highlight complex clinical diagnostic and management guidelines. Presents a full-color design that includes clear illustrative examples of the relevant pathology and clinical issues, for quick access to the answers you need. Incorporates the codified WHO classification for all lymphomas and leukemias.

Pediatric Hematology and Oncology

This textbook walks clinicians through the psychosocial issues and challenges faced by children and adolescents with cancer and their families. Through a developmental lens, the text provides guidance and resources that will enable clinicians to understand the physical and emotional impact of the disease from diagnosis onwards, to work with families in distress, and to diagnose and treat a range of behavioral, psychological, and psychiatric issues. The book also addresses the burgeoning fields of social media, complementary therapies, palliative care, and survivorship. Among the variety of useful resources supplied are assessment tools, websites, and additional reading materials. The psychosocial issues that arise for children and their families during the course of treatment are an important yet often overlooked aspect of pediatric oncology care. The reader will find that *Pediatric Psychosocial Oncology: Textbook for Multidisciplinary Care* covers these issues at the forefront of clinical care in a direct and approachable way, integrating research literature with practical clinical guidance.

Evidence-Based Pediatric Oncology

Research has demonstrated that children with cancer and their parents regard procedure-related pain as one of the most difficult parts of having cancer, and their distress continues years after the completion of anti-cancer treatment. This is a practical 'how to' book that will provide readers with the knowledge, skills, structure and techniques to help young patients and their families to cope with painful medical procedures. The author has gathered together over 10 years experience in clinical pediatric oncology and palliative care to provide a concise overview of procedure-related pain. The

book describes the pharmacological and psychological methods of pain relief and how they may be combined, along with the difficulties that may be encountered in their implementation. It also encourages better integration between research work and clinical practice. This is an essential guide for all healthcare professionals working with young people in palliative care or oncology, or those working with children undergoing painful treatments for other conditions such as those with diabetes or those undergoing dialysis.

Oncology of Infancy and Childhood E-Book

Cancer is a very rare disease in children. There have been impressive gains in survival in recent years, and these have been achieved through the use of chemotherapy and national and international

clinical trials. The diagnosis of cancer in a child imposes considerable stress on the whole family. In the immediate time after diagnosis, parents must learn about the disease and its treatment, explain what is happening to the child, and make arrangements for the care of other children in the family. For the child, treatment is associated with many side effects depending on the specific drugs used. In addition, the child is prone to infection and therefore is likely to miss a lot of school and other activities. For all these reasons, physicians and families have become aware that cancer has huge implications for the quality of the child's life. This book is an attempt to describe how quality of life is affected at different stages of the disease process. Comprehensive reviews are provided of the impact on the child's physical activity, social life, and school and educational achievements. Special consideration is given to children with leukemia (one of the more common cancers) and brain tumors. Cancer does not just affect the child but every member of the family. Consequently there is coverage of the effects on parents and also healthy brothers and sisters. To the extent that improvements in survival have been achieved by national and international collaboration between clinicians, it is concluded that efforts to improve the quality of these children's lives is dependent on collaboration between clinicians, nurses, and behavioral scientists at national and international levels. This book should provide an impetus for such collaboration.

Pediatric Psychosocial Oncology: Textbook for Multidisciplinary Care

Pediatric Neoplasia: Advances in Molecular Pathology and Translational Medicine presents many of the major, relevant advances in molecular pathology that are occurring in the field of pediatric oncology and will serve as a useful overview for resident and attending physicians as well as scientists interested in understanding the molecular pathology of pediatric cancer in the context of clinical medicine. Chapters are based upon organ systems, and each is written by an expert or pair of experts in their field with subspecialty training and extensive clinical experience. Each chapter describes a variable number of tumors and includes an overview of the classification system and clinicopathological characteristics of each tumor. This is followed by a discussion of the molecular pathology relevant to a specific tumor, including specific molecular markers of the tumors, methods used for diagnosis or clinical management, clinical significance of the markers, and if appropriate, a description or discussion of current activities in translational research or issues that need to be addressed in the future. **Pediatric Neoplasia: Advances in Molecular Pathology and Translational Medicine** will be of great value to pathologists, oncologists, hematologists, internal medicine and pediatric specialists, as well as pharmaceutical professionals and translational and clinical researchers.

APON's definitive work on the supportive care of children and adolescents with cancer provides an up-to-date, chapter-by-chapter assessment of common and rare diseases and their treatments. Important information on adolescents is now interspersed throughout the new edition, highlighting crucial differences in the care provided to this special population. New case studies with portraits of the patient have been included in each disease chapter to keep the focus on personalized care of the child. This new edition also includes Internet resources, a research mega-table listing three decades-worth of nursing studies in pediatric oncology, completely updated pharmacology tables, and new chapters on Surgery, Oncological Emergencies, Complementary and Alternative Therapies, Home Care, Palliative Care, Research, and Ethical Issues

Pediatric Hematology/Oncology Secrets

This comprehensive and established textbook presents an up-to-date overview of all aspects of managing children with cancer and in its third edition has been completely revised and updated to reflect recent developments in the field. Individual malignancies are given comprehensive coverage, including details of clinical presentation, diagnostic investigations, novel imaging techniques and current management with chemotherapy, radiotherapy and surgery. Current controversies relating to diagnosis and management - a popular feature of previous editions - are presented in boxes for increased emphasis. Content changes to the new edition include a restructured pathology section and new chapters under separate headings of 'advances in therapy' and 'late effects and supportive care'. Retaining a European flavour, but incorporating information from American and other national studies

to give an objective and comprehensive overview, the third edition of Paediatric Oncology remains invaluable reading for trainee and practising paediatric oncologists, and nurse specialists, world-wide. [contributors mainly UK and European, plus 1 from US and 1 from Australia]

Ethical Issues in Pediatric Hematology/Oncology

"Pediatric Radiation Oncology is the definitive text and reference on use of radiation therapy for childhood cancer. The fifth edition reviews all significant recent clinical trials--including, for the first time, significant European clinical trials--and provides increased coverage of international and Third World issues. The latest cancer staging guidelines are included. New chapters cover psychosocial aspects of radiotherapy for the child and family and medical management of pain, nausea, nutritional problems, and blood count depression in the child with cancer"--Provided by publisher.

Pediatric Oncology

This textbook is the first to focus on comprehensive interdisciplinary care approaches aimed at enhancing the wellbeing of children with cancer and their families throughout the illness experience. Among the topics addressed are the epidemiology of pediatric cancer distress, including physical, emotional, social, and spiritual dimensions; the role of the interdisciplinary team; communication and advance care planning; symptom prevention and management; care at the end of life; family bereavement care; and approaches to ease clinician distress. The contributing authors are true experts and provide guidance based on the highest available level of evidence in the field. The book has not only an interdisciplinary but also an international perspective; it will appeal globally to all clinicians caring for children with cancer, including physicians, nurses, psychosocial clinicians, and chaplains, among others.

Children With Cancer

Publisher description

Pediatric Neoplasia

To address the growing complexities of childhood cancer, Nathan and Oski's Hematology and Oncology of Infancy and Childhood has now been separated into two distinct volumes. With this volume devoted strictly to pediatric oncology, and another to pediatric hematology, you will be on the cutting edge of these two fields. This exciting new, full-color reference provides you with the most comprehensive, authoritative, up-to-date information for diagnosing and treating children with cancer. It brings together the pathophysiology of disease with detailed clinical guidance on diagnosis and management for the full range of childhood cancers, including aspects important in optimal supportive care. Written by the leading names in pediatric oncology, this resource is an essential tool for all who care for pediatric cancer patients. And, as an Expert Consult title, this brand-new resource comes with access to the complete contents online, fully searchable. Offers comprehensive coverage of all pediatric cancers, including less common tumors, making this the most complete guide to pediatric cancer. Covers emerging research developments in cancer biology and therapeutics, both globally and in specific pediatric tumors. Includes a section on supportive care in pediatric oncology, written by authors who represent the critical subdisciplines involved in this important aspect of pediatric oncology. Uses many boxes, graphs, and tables to highlight complex clinical diagnostic and management guidelines. Presents a full-color design that includes clear illustrative examples of the relevant pathology and clinical issues, for quick access to the answers you need. Provides access to the complete contents online, fully searchable, enabling you to consult it rapidly from any computer with an Internet connection. Incorporates the codified WHO classification for all lymphomas and leukemias. Your purchase entitles you to access the web site until the next edition is published, or until the current edition is no longer offered for sale by Elsevier, whichever occurs first. If the next edition is published less than one year after your purchase, you will be entitled to online access for one year from your date of purchase.
