Logic and Rhetoric in England, 1500-1700

Mark Bevir's book explores the forms of reasoning appropriate to the history of ideas, enhancing our understanding by grappling with central questions such as: What is a meaning? What constitutes objective knowledge of the past? What are beliefs and traditions? How can we explain why people held the beliefs they did? The book ranges widely over issues and theorists associated with post-analytic philosophy, post-modernism, hermeneutics, literary theory, political thought and social theory.

Logic and Rhetoric in England, 1500-1700

The first ever comprehensive history of anti-Semitism in England, from medieval murder and expulsion through to contemporary forms of anti-Zionism in the 21st century.

The Logic of the History of Ideas

How does coding change the way we think about architecture? This question opens up an important research perspective. In this book, Miro Roman and his AI Alice_ch3n81 develop a playful scenario in which they propose coding as the new literacy of information. They convey knowledge in the form of a project model that links the fields of architecture and information through two interwoven narrative strands in an "infinite flow" of real books. Focusing on the intersection of information technology and architectural formulation, the authors create an evolving intellectual reflection on digital architecture and computer science.

Trials of the Diaspora

Under the Tudor monarchy, English law expanded to include the category of "treason by words." Rebecca Lemon investigates this remarkable phrase both as a legal charge and as a cultural event. English citizens, she shows, expressed competing notions of treason in opposition to the growing absolutism of the monarchy. Lemon explores the complex participation of texts by John Donne, Ben Jonson, and William Shakespeare in the legal and political controversies marking the Earl of Essex's 1601 rebellion and the 1605 Gunpowder Plot. Lemon suggests that the articulation of diverse ideas about treason within literary and polemical texts produced increasingly fractured conceptions of the

crime of treason itself. Further, literary texts, in representing issues familiar from political polemic, helped to foster more free, less ideologically rigid, responses to the crisis of treason. As a result, such works of imagination bolstered an emerging discourse on subjects' rights. Treason by Words offers an original theory of the role of dissent and rebellion during a period of burgeoning sovereign power.

Play Among Books

This book introduces the basic inferential patterns of formal logic as they are embedded in everyday life, information technology, and science. It is designed to make clear the basic topics of classical and modern logic. The aim is to improve the reader's ability to navigate both everyday and science-based interactions.

Treason by Words

"This short book makes you smarter than 99% of the population. . . . The concepts within it will increase your company's 'organizational intelligence.' . . . It's more than just a must-read, it's a 'have-to-read-or-you're-fired' book"—Geoffrey James, INC.com From the author of *An Illustrated Book of Loaded Language*, here's the antidote to fuzzy thinking, with furry animals! Have you read (or stumbled into) one too many irrational online debates? Ali Almosawi certainly had, so he wrote *An Illustrated Book of Bad Arguments*! This handy guide is here to bring the internet age a much-needed dose of old-school logic (really old-school, à la Aristotle). Here are cogent explanations of the straw man fallacy, the slippery slope argument, the ad hominem attack, and other common attempts at reasoning that actually fall short—plus a beautifully drawn menagerie of animals who (adorably) commit every logical faux pas. Rabbit thinks a strange light in the sky must be a UFO because no one can prove otherwise (the appeal to ignorance). And Lion doesn't believe that gas emissions harm the planet because, if that were true, he wouldn't like the result (the argument from consequences). Once you learn to recognize these abuses of reason, they start to crop up everywhere from congressional debate to YouTube comments—which makes this geek-chic book a must for anyone in the habit of holding opinions.

An Introduction to Logic

A free open access ebook is available upon publication. Learn more at www.luminosoa.org. Chicago is home to one of the largest, most politically active Palestinian immigrant communities in the United States. For decades, secular nationalism held sway as the dominant political ideology, but since the 1990s its structures have weakened and Islamic institutions have gained strength. Drawing on extensive fieldwork and interview data, *Palestinian Chicago* charts the origins of these changes and the multiple effects they have had on identity across religious, political, class, gender, and generational lines. The perspectives that emerge through this rich ethnography challenge prevailing understandings of secularity and religion, offering critical insight into current debates about immigration and national belonging.

An Illustrated Book of Bad Arguments

The classic book on systems thinking—with more than half a million copies sold worldwide! "This is a fabulous book... This book opened my mind and reshaped the way I think about investing."—Forbes "Thinking in Systems is required reading for anyone hoping to run a successful company, community, or country. Learning how to think in systems is now part of change-agent literacy. And this is the best book of its kind."—Hunter Lovins In the years following her role as the lead author of the international bestseller, *Limits to Growth*—the first book to show the consequences of unchecked growth on a finite planet—Donella Meadows remained a pioneer of environmental and social analysis until her untimely death in 2001. *Thinking in Systems* is a concise and crucial book offering insight for problem solving on scales ranging from the personal to the global. Edited by the Sustainability Institute's Diana Wright, this essential primer brings systems thinking out of the realm of computers and equations and into the tangible world, showing readers how to develop the systems-thinking skills that thought leaders across the globe consider critical for 21st-century life. Some of the biggest problems facing the world—war, hunger, poverty, and environmental degradation—are essentially system failures. They cannot be solved by fixing one piece in isolation from the others, because even seemingly minor details have enormous power to undermine the best efforts of too-narrow thinking. While readers will learn the conceptual tools and methods of systems thinking, the heart of the book is grander than methodology. Donella Meadows was known as much for nurturing positive outcomes as she was for delving into the

science behind global dilemmas. She reminds readers to pay attention to what is important, not just what is quantifiable, to stay humble, and to stay a learner. In a world growing ever more complicated, crowded, and interdependent, *Thinking in Systems* helps readers avoid confusion and helplessness, the first step toward finding proactive and effective solutions.

Palestinian Chicago

From Ancient Greece to the present day, *Trivium 21c* explores whether a contemporary trivium (Grammar, Dialectic, and Rhetoric) can unite progressive and traditionalist institutions, teachers, politicians and parents in the common pursuit of providing a great education for our children in the 21st century. Education policy and practice is a battleground. Traditionalists argue for the teaching of a privileged type of hard knowledge and deride soft skills. Progressives deride learning about great works of the past preferring '21c skills' (21st century skills) such as creativity and critical thinking. Whilst looking for a school for his daughter, the author became frustrated by schools' inability to value knowledge, as well as creativity, foster discipline alongside free-thinking, and value citizenship alongside independent learning. Drawing from his work as a creative teacher, Robinson finds inspiration in the Arts and the need to nurture learners with the ability to deal with the uncertainties of our age. Named one of Book Authority's best education books of all time.

Thinking in Systems

This book combines detailed scientific historical research with characteristic philosophic breadth and verve.

Trivium 21c

Visions of Invasion: Alien Affects, Cinema, and Citizenship in Settler Colonies explores how the US government mobilizes media and surveillance technologies to operate a highly networked, multidimensional system for controlling migrants. Author Michael Lechuga focuses on three arenas where a citizenship control assemblage manufactures alienhood: Hollywood extraterrestrial invasion film, federal antimigration and border security legislation, and various immigration enforcement protocols implemented along the Mexico–United States border. Building on rhetorical studies, settler colonial studies, and media studies, *Visions of Invasion* offers a glimpse at how the processes of alien-making contribute to an ongoing settler colonial project in the US. Lechuga demonstrates that popular films—*The War of the Worlds*, *Predator*, *Men in Black*, and more—participate in the production of migrants as subjective terrorists, felons, and other noncitizen personae vilified in public discourse. Beyond just tracing how alien invasion narratives circulate in popular media, Lechuga describes how the logics motivating early US colonists materialize in both the US's citizenship control policy and in some of the country's most popular texts. Beneath each of the film franchises and antimigrant political expressions described in *Visions of Invasion* lies an anxious colonial logic in which the settler way of life is seemingly threatened by false narratives of imminent invasion from abroad. The volume offers a deep dive into how the rhetorical figure of the alien has been manufactured as a political subjectivity, one that plays out the anxieties, guilts, and fears of colonialism in today's science fiction landscape.

The Taming of Chance

Our usual representations of the opposition between the "civilized" and the "primitive" derive from willfully ignoring the relationship of distance our social science sets up between the observer and the observed. In fact, the author argues, the relationship between the anthropologist and his object of study is a particular instance of the relationship between knowing and doing, interpreting and using, symbolic mastery and practical mastery—or between logical logic, armed with all the accumulated instruments of objectification, and the universally pre-logical logic of practice. In this, his fullest statement of a theory of practice, Bourdieu both sets out what might be involved in incorporating one's own standpoint into an investigation and develops his understanding of the powers inherent in the second member of many oppositional pairs—that is, he explicates how the practical concerns of daily life condition the transmission and functioning of social or cultural forms. The first part of the book, "Critique of Theoretical Reason," covers more general questions, such as the objectivization of the generic relationship between social scientific observers and their objects of study, the need to overcome the gulf between subjectivism and objectivism, the interplay between structure and practice (a phenomenon Bourdieu describes via his concept of the *habitus*), the place of the body, the manipulation of time, varieties of symbolic capital, and modes of domination. The second part of the book, "Practical Logics,"

develops detailed case studies based on Bourdieu's ethnographic fieldwork in Algeria. These examples touch on kinship patterns, the social construction of domestic space, social categories of perception and classification, and ritualized actions and exchanges. This book develops in full detail the theoretical positions sketched in Bourdieu's *Outline of a Theory of Practice*. It will be especially useful to readers seeking to grasp the subtle concepts central to Bourdieu's theory, to theorists interested in his points of departure from structuralism (especially from Lévi-Strauss), and to critics eager to understand what role his theory gives to human agency. It also reveals Bourdieu to be an anthropological theorist of considerable originality and power.

Visions of Invasion

'Richly documented and convincingly presented' -- *New Society* Mods and Rockers, skinheads, video nasties, designer drugs, bogus asylum seekers and hoodies. Every era has its own moral panics. It was Stanley Cohen's classic account, first published in the early 1970s and regularly revised, that brought the term 'moral panic' into widespread discussion. It is an outstanding investigation of the way in which the media and often those in a position of political power define a condition, or group, as a threat to societal values and interests. Fanned by screaming media headlines, Cohen brilliantly demonstrates how this leads to such groups being marginalised and vilified in the popular imagination, inhibiting rational debate about solutions to the social problems such groups represent. Furthermore, he argues that moral panics go even further by identifying the very fault lines of power in society. Full of sharp insight and analysis, *Folk Devils and Moral Panics* is essential reading for anyone wanting to understand this powerful and enduring phenomenon. Professor Stanley Cohen is Emeritus Professor of Sociology at the London School of Economics. He received the Sellin-Glueck Award of the American Society of Criminology (1985) and is on the Board of the International Council on Human Rights. He is a member of the British Academy.

The Logic of Practice

A weekly review of politics, literature, theology, and art.

The Athenaeum

Political decisions are never taken in a vacuum but are shaped both by current events and historical context. In other words, long-term developments and patterns in which the accumulated memory of what came earlier, can greatly (and sometimes subconsciously) influence subsequent policy choices. Working forward from the later seventeenth century, this book explores the 'deep history' of the changing and competing understandings within the Tory party of the role Britain has aspired to play on a world stage. Conservatism has long been one of the major British political tendencies, committed to the defence of established institutions, with a strong sense of the 'national interest', and embracing both 'liberal' and 'authoritarian' views of empire. The Tory party has, moreover, at several times been deeply divided, if not convulsed, by different perspectives on Britain's international orientation and different positions on foreign and imperial policy. Underlying Tory beliefs upon which views of Britain's global role were built were often not stated but assumed. As a result they tend to be obscured from historical view. This book seeks to recover and reconsider those beliefs, and to understand how the Tory party has sought to navigate its way through the difficult pathways of foreign and imperial politics, and why this determination outlasted Britain's rapid decolonisation and was apparently remarkably little affected by it. With a supporting cast from Pitt to Disraeli, Churchill to Thatcher, the book provides a fascinating insight into the influence of history over politics. Moreover it argues that there has been an inherent politicisation of the concept of national interests, such that strategic culture and foreign policy cannot be understood other than in terms of a historically distorted political debate.

Athenaeum and Literary Chronicle

An innovative new anthology exploring how science fiction can motivate new approaches to economics. From the libertarian economics of Ayn Rand to Aldous Huxley's consumerist dystopias, economics and science fiction have often orbited each other. In *Economic Science Fictions*, editor William Davies has deliberately merged the two worlds, asking how we might harness the power of the utopian imagination to revitalize economic thinking. Rooted in the sense that our current economic reality is no longer credible or viable, this collection treats our economy as a series of fictions and science fiction as a means of anticipating different economic futures. It asks how science fiction can motivate new approaches to economics and provides surprising new syntheses, merging social science with fiction,

design with politics, scholarship with experimental forms. With an opening chapter from Ha-Joon Chang as well as theory, short stories, and reflections on design, this book from Goldsmiths Press challenges and changes the notion that economics and science fiction are worlds apart. The result is a wealth of fresh and unusual perspectives for anyone who believes the economy is too important to be left solely to economists. Contributors AUDINT, Khairani Barokka, Carina Brand, Ha-Joon Chang, Miriam Cherry, William Davies, Mark Fisher, Dan Gavshon-Brady and James Pockson, Owen Hatherley, Laura Horn, Tim Jackson, Mark Johnson, Bastien Kerspern, Nora O Murchú, Tobias Revell et al., Judy Thorne, Sherryl Vint, Joseph Walton, Brian Willems

Catalog of Copyright Entries. Third Series

Copleston, an Oxford Jesuit and specialist in the history of philosophy, created his history as an introduction for Catholic ecclesiastical seminaries. The 11-volume series gives an accessible account of each philosopher's work, and explains their relationship to the work of other philosophers.

History of the English Speaking Peoples

Greek: A History of the Language and its Speakers, Second Edition reveals the trajectory of the Greek language from the Mycenaean period of the second millennium BC to the current day. • Offers a complete linguistic treatment of the history of the Greek language • Updated second edition features increased coverage of the ancient evidence, as well as the roots and development of diglossia • Includes maps that clearly illustrate the distribution of ancient dialects and the geographical spread of Greek in the early Middle Ages

Folk Devils and Moral Panics

Joddy Murray, in "Kinematic Rhetoric," puts forward a theory of rhetoric that adds the elements of movement, sound, image, affect and duration to traditional accounts of digital, visual and multimodal rhetorics. His concept of "time-affect" images provides a complex and nuanced theory for composing that builds upon his earlier concept of "nondiscursive texts." By turning to Deleuze's work on cinema, Murray presents the "time-affect image," which "generates" and amplifies affectivity through duration and motion, and is the key concept in this rhetorical theory. Motion, he argues, creates meaning that is independent of the content and, like all images, carries with it the potential for persuasion through the affective domain.

The Spectator

SHORTLISTED FOR THE EAST ANGLIAN BOOK AWARD 2023 'Exceptionally well-written and intelligent ... if you are interested in this remarkable microcosm of England, the book will grip you; if you aren't, it will make you realise that you jolly well should be.' Simon Heffer, Spectator 'A deeply sensitive and engaging portrait of a misunderstood county and its people' Financial Times 'A stellar performance' Jonathan Meades Essex. A county both famous and infamous: the stuff of tabloid headlines and reality television, consumer culture and right-wing politicians. England's dark id. But beyond the sensationalist headlines lies a strange and secret place with a rich history: of smugglers and private islands, artists and radicals, myths and legends. It's where the Peasants' Revolt began and the Empire Windrush docked. And - from political movements like Brexit to cultural events like TOWIE - where Essex leads, the rest of us often follow. Deeply researched and thoroughly engaging, The Invention of Essex shows that there is more to this fabled English county than meets the eye.

The Tory World

Few can imagine a world without telephones or televisions; many depend on computers and the Internet as part of daily life. Without scientific theory, these developments would not have been possible. In this exceptionally clear and engaging introduction to philosophy of science, James Ladyman explores the philosophical questions that arise when we reflect on the nature of the scientific method and the knowledge it produces. He discusses whether fundamental philosophical questions about knowledge and reality might be answered by science, and considers in detail the debate between realists and anti-realists about the extent of scientific knowledge. Along the way, central topics in philosophy of science, such as the demarcation of science from non-science, induction, confirmation and falsification, the relationship between theory and observation and relativism are all addressed. Important and complex

current debates over underdetermination, inference to the best explanation and the implications of radical theory change are clarified and clearly explained for those new to the subject.

Economic Science Fictions

"You might think that dancing doesn't have a lot to do with social research, and doing social research is probably why you picked this book up in the first place. But trust me. Salsa dancing is a practice as well as a metaphor for a kind of research that will make your life easier and better." Savvy, witty, and sensible, this unique book is both a handbook for defining and completing a research project, and an astute introduction to the neglected history and changeable philosophy of modern social science. In this volume, Kristin Luker guides novice researchers in: knowing the difference between an area of interest and a research topic; defining the relevant parts of a potentially infinite research literature; mastering sampling, operationalization, and generalization; understanding which research methods best answer your questions; beating writer's block. Most important, she shows how friendships, non-academic interests, and even salsa dancing can make for a better researcher. "You know about setting the kitchen timer and writing for only an hour, or only 15 minutes if you are feeling particularly anxious. I wrote a fairly large part of this book feeling exactly like that. If I can write an entire book 15 minutes at a time, so can you."

History of Philosophy Volume 2

What really makes a video game story interactive? What's the best way to create an interactive story? How much control should players be given? Do they really want that control in the first place? Do they even know what they want-or are their stated desires at odds with the unconscious preferences? All of these questions and more are examined in this definitive book on interactive storytelling for video games. You'll get detailed descriptions of all major types of interactive stories, case studies of popular games (including Bioshock, Fallout 3, Final Fantasy XIII, Heavy Rain, and Metal Gear Solid), and how players interact with them, and an in-depth analysis of the results of a national survey on player storytelling preferences in games. You'll get the expert advice you need to generate compelling and original game concepts and narratives. With *Interactive Storytelling for Video Games*, you'll:

The Examiner

A strong clinical emphasis is present throughout this volume from the first section of commonly presenting problems through to the section addressing problems shared with a range of other clinical sub-specialties.

Greek

A visual guide to the way the world really works Every day, every hour, every minute we are bombarded by information - from television, from newspapers, from the internet, we're steeped in it, maybe even lost in it. We need a new way to relate to it, to discover the beauty and the fun of information for information's sake. No dry facts, theories or statistics. Instead, *Information is Beautiful* contains visually stunning displays of information that blend the facts with their connections, their context and their relationships - making information meaningful, entertaining and beautiful. This is information like you have never seen it before - keeping text to a minimum and using unique visuals that offer a blueprint of modern life - a map of beautiful colour illustrations that are tactile to hold and easy to flick through but intriguing and engaging enough to study for hours.

Kinematic Rhetoric

For adults. There is a pressing need for methodologically sound RCTs to confirm whether such interventions are helpful and, if so, for whom.

History of the Rise and Influence of the Spirit of Rationalism in Europe

With the intrigue of a psychological thriller, *The Stranger*—Camus's masterpiece—gives us the story of an ordinary man unwittingly drawn into a senseless murder on an Algerian beach. With an Introduction by Peter Dunwoodie; translated by Matthew Ward. Behind the subterfuge, Camus explores what he termed "the nakedness of man faced with the absurd" and describes the condition of reckless alienation and spiritual exhaustion that characterized so much of twentieth-century life. "The Stranger is a strikingly modern text and Matthew Ward's translation will enable readers to appreciate why Camus's

stoical anti-hero and -devious narrator remains one of the key expressions of a postwar Western malaise, and one of the cleverest exponents of a literature of ambiguity.” –from the Introduction by Peter Dunwoodie
First published in 1946; now in translation by Matthew Ward

The Invention of Essex

Madman, tyrant, animal—history has given Adolf Hitler many names. In *Mein Kampf* (My Struggle), often called the Nazi bible, Hitler describes his life, frustrations, ideals, and dreams. Born to an impoverished couple in a small town in Austria, the young Adolf grew up with the fervent desire to become a painter. The death of his parents and outright rejection from art schools in Vienna forced him into underpaid work as a laborer. During the First World War, Hitler served in the infantry and was decorated for bravery. After the war, he became actively involved with socialist political groups and quickly rose to power, establishing himself as Chairman of the National Socialist German Worker's party. In 1924, Hitler led a coalition of nationalist groups in a bid to overthrow the Bavarian government in Munich. The infamous Munich "Beer-hall putsch" was unsuccessful, and Hitler was arrested. During the nine months he was in prison, an embittered and frustrated Hitler dictated a personal manifesto to his loyal follower Rudolph Hess. He vented his sentiments against communism and the Jewish people in this document, which was to become *Mein Kampf*, the controversial book that is seen as the blue-print for Hitler's political and military campaign. In *Mein Kampf*, Hitler describes his strategy for rebuilding Germany and conquering Europe. It is a glimpse into the mind of a man who destabilized world peace and pursued the genocide now known as the Holocaust.

Understanding Philosophy of Science

Shows how analogy-making pervades human thought at all levels, influencing the choice of words and phrases in speech, providing guidance in unfamiliar situations, and giving rise to great acts of imagination.

Salsa Dancing into the Social Sciences

The Illustrated London News
