Cascade of events in fracture healing Acute fracture

Definition of absolute stability Absolute stability means that there is no micro-motion at the

Implants that produce absolute stability otág screw fixation (interfragmentary compression) + NA -

Axial compression with compression plate •Buttress plate Tension Band Wiring

Definition of relative stability

Multifragmentary fractures Tolerate more motion between the fracture fragments Overall motion is shared by several fracture planes, which reduces tissue strain or fracture and deformation at the

fracture gap • Flexible fixation can stimulate callus formation thereby accelerating fracture healing

Clinical indications for relative stability o Any non-articular, multifragmentary fracture
