What is decontamination ? Explain the three levels of decontamination -Decontamination is the removal of pathogens and other substances from tools and surfaces. The three levels are: • Sterilization, High level, completely destroy every organism on a surface, usually by the use of an Autoclave. • Disinfection, second level does not kill bacterial spores but controls microorganism on hard nonporous surfaces such as cuticle nippers/extracting tools and other salon implements. By the use of an approved disinfectant. Sanitation / Cleaning, third lowest level, reduce the number of pathogens or disease producing organism found on a surface by scrubbing with a brush and washing with soap and water.

What is efficacy and why is it important? -Efficacy, the power to produce an effect, means the effectiveness of a product against bacteria, fungi and viruses. An efficacy standard on a product label tells you which bacteria will be effectively destroyed by the product being used.

List at least six precautions to follow when using disinfectants. 1. Wear gloves and safety glasses 2. Add disinfectant to water, never add water to the disinfectant 3. Keep away from children 4. Use tongs, gloves or draining baskets when removing implements from disinfectants. 5. Don't pour quats, phenols and others like over hands 6. Never place in unmarked container

What are Universal precautions? A set of guidelines and controls, published by the Centers of Diseases Control and Prevention (cdc) that requires the employer and the employee to assume that all human blood and specified human body fluids are infectious for HIV, HBV and other blood borne pathogens. Universal precautions include hand washing, gloving, personal protective equipment, injury prevention, proper handling and disposal of needles, other sharp instruments and products that have been contaminated by blood or other body fluids.

List and describe the functions of the five types of tissue found in the human body. Connective tissue : supports, protects, and binds together other tissues of the body, examples are bone, cartilage, ligament, tendon, fascia which separate muscles and fat or adipose tissue. - Epithelial tissue protective covering on body surface such as the skin, mucous membranes, linings of the heart, digestive and respiratory organs and glands Liquid tissue carries food, waste products and hormones by means of the blood and lymph. - Muscular tissue: Contracts and moves various parts of the body. -Nerve tissue: Carries messages to and from the brain, and controls and coordinates all body functions.

List and describe the functions of the main organs found in the body. Brain: controls the body Eyes: control vision - Heart: circulates the blood -Kidneys: excrete water and waste products Lungs: supply oxygen to the blood - Liver: removes toxic products of digestion - Skin: forms external protective covering of the body - Stomach and Intestines: aid in digestion of food

Name and describe the three types of nerves found in the body. - Sensory nerves: carry impulses or messages from the sense organs to the brain, where sensations such as touch, cold, experienced; called receptors and are located at the surface of the skin. - Motor Nerves: carry impulses from the brain to the muscles

Name and discuss the two types of glands found in the human body. - Exocrine or duct glands: produce a substance that travels through small tube like ducts; include sweat and oil glands of the skin and intestinal glands. - Endocrine or ductless glands: release secretions called hormones directly into the bloodstream, which in turn influence the welfare of the entire body.

What is chemistry? Chemistry is the science of the structure and properties of matter and its changes.

What are atoms? Atoms are the structural units of the elements that make up all matter. An atom is the smallest particle of an element that retains the properties of that element.

What are elements? Elements are substances that cannot be separated into simpler substances by ordinary chemical means.

What are Physical and Chemical properties of matter? Physical properties are those characteristics that can be determined without a chemical reaction and without a chemical change in the identity of the substance. Physical properties and hardness.

Define pH and the pH scale. pH refers to the relative degree of acidity and alkalinity of a substance.

The pH values range from 0 to 14. A pH of 7 indicates a neutral solution, a pH below 7 indicates an acidic solution, and a pH above 7 indicates an alkaline solution.

Describe the two types of electric current. - Direct current: constant, even flow current that travels in one direction only and produces a chemical reaction. (Ex. Flashlights, cameras, remotes) - Alternating current: rapid and interrupted current, flowing first in one direction and then in the opposite direction. (Ex. Hairdryers, refrigerators, curling irons.)

List the four main types of electrical measurements. What do they measure? -Volt : Measures the pressure or force that pushes the flow of electrons forward through a conductor -amp: Measures the strength of an electric current -ohm: Measures the resistance of an electric current - Watt: Measures how much electric energy is being used in one second

The authors provide alternative avenues through which students can understand the material. Each topic is presented four ways: geometrically, numerically, analytically, and verbally. Students are encouraged to interpret answers and explain their reasoning throughout the book, which the author considers a unique concept compared to other books. Many of the real-world problems are open-ended, meaning that there may be more than one approach and more than one solution, depending on the student's analysis. Solving a problem often relies on the use of common sense and critical thinking skills. Students are encouraged to develop estimating and approximating skills. The book presents the main ideas of calculus in a clear, simple manner to improve students' understanding and encourage them to read the examples. Technology is used as a tool to help students visualize the concepts and learn to think mathematically. Graphics calculators, graphing software, or computer algebra systems perfectly complement this book but the emphasis is on the calculus concepts rather than the technology.
