Solutions are a type of mixture formed when two materials are evenly mixed together.

Liquid solutions are often formed by dissolving a substance in water.

The substances in a mixture can be separated based on the properties of the ingredients.

Substances can be separated based on their relative density in water when one ingredient floats and the other sinks!

The solubility of substances can also be used to separate them. The soluble substance can be dissolved in water. Then the insoluble substance can be filtered away from the solution!
