The Art of Polymer Clay Creative Surface Effects

Polymer clay has grown and grown and grown in popularity since the publication of Donna Kato's best-selling The Art of Polymer Clay in 1997. And there have been so many technical advances, too. Now poly-diva Donna Kato presents an all-new look at one of crafters' all-time favorite mediums. Donna Kato's Polymer Clay Innovations begins with the essentials of polymer clay, including its working properties, plus tools, curing, safety recommendations, and color blending (with full information on

the now-indispensable Skinner Blend). Photo-packed chapters focus on exciting projects—beads, bracelets, pins, pendants, and boxes--and showcase new techniques, including image transfers, surface treatments such as stencils, stamps, paints, and inks, sculpting, inclusions, special effects, and finishing. Finished pieces by some of the biggest names in polymer clay, including Kathleen Dustin, Pier Voulkos, and Nan Roche, plus Donna Kato herself, offer ideas and inspiration.

A thousand and one ideas for making beautiful polymer clay millefiori. In Venetian glassmaking, slender rods of molten glass are shaped, then cut to reveal amazingly detailed patterns: flowers, geometric shapes, dancing colors. These slices are called millefiori, "thousand flowers," because they form a carpet of flowers when placed side by side. Now celebrity author Donna Kato shows crafters exactly how to re-create these intricate, fascinating designs in polymer clay. The Art of Polymer Clay Millefiori Techniques reveals the entire process: how to work with the polymer clay, the basics of planning and creating a cane, and using color effectively. Dozens of canes, from simple to simply stunning, are included, and everything is clearly explained and illustrated with full-color photos, the Donna Kato way. Throughout the book, examples of stunning work by such millefiori artists as Kathy Amt, Pier Voulkos, and Kathleen Dustin provide inspiration. There must be a thousand ways to make beautiful millefiori . . . explore them all in The Art of Polymer Clay Millefiori Techniques.

The Fundamentals of Creative Design

The invention of collage by Picasso and Braque in 1912 proved to be a dramatic turning point in the development of Cubism and Futurism and ultimately one of the most significant innovations in twentieth-century art. Collage has traditionally been viewed as a new expression of modernism, one allied with modernism's search for purity of means, anti-illusionism, unity, and autonomy of form. This book - the first comprehensive study of collage and its relation to modernism - challenges this view. Christine Poggi argues that collage did not become a new language of modernism but a new language with which to critique modernism. She focuses on the ways Cubist collage - and the Futurist multimedia work that was inspired by it - undermined prevailing notions of material and stylistic unity, subverted the role of the frame and pictorial ground, and brought the languages of high and low culture into a new relationship of exchange.

In August 1942, the Allies launched a raid against the German-held port of Dieppe on the French channel coast. It was largely a disaster, with the Canadian forces bearing the brunt of the catastrophe. However, it wasn't all a failure, and history has tended to overlook the role of 4 Commando, who, along with their US Ranger counter-parts, landed and successfully disabled the German guns threatening the rest of the landings. Their actions proved an excellent demonstration of the military adage "train hard, fight easy" and showed the advantage of proper operational planning and brilliant leadership. This controversial raid also included members of the Free French and it was the first time US land forces engaged the Germans on mainland Europe. Set in the context of the Dieppe raid as a whole, Will Fowler studies the contribution of No. 4 Commando and Operation Cauldron, and evaluates how and why they achieved their objectives in this daring Commando raid of World War II.

In this beautifully written and deeply researched study, Hannah Frank provides an original way to understand American animated cartoons from the Golden Age of animation (1920–1960). In the pre-digital age of the twentieth century, the making of cartoons was mechanized and standardized: thousands of drawings were inked and painted onto individual transparent celluloid sheets (called "cels") and then photographed in succession, a labor-intensive process that was divided across scores of artists and technicians. In order to see the art, labor, and technology of cel animation, Frank slows cartoons down to look frame by frame, finding hitherto unseen aspects of the animated image. What emerges is both a methodology and a highly original account of an art formed on the assembly line.

In the midst of spiraling ecological devastation, multispecies feminist theorist Donna J. Haraway offers provocative new ways to reconfigure our relations to the earth and all its inhabitants. She eschews referring to our current epoch as the Anthropocene, preferring to conceptualize it as what she calls the Chthulucene, as it more aptly and fully describes our epoch as one in which the human and nonhuman are inextricably linked in tentacular practices. The Chthulucene, Haraway explains, requires sym-poiesis, or making-with, rather than auto-poiesis, or self-making. Learning to stay with the trouble of living and dying together on a damaged earth will prove more conducive to the kind of thinking that would provide the means to building more livable futures. Theoretically and methodologically driven by the signifier SF—string figures, science fact, science fiction, speculative feminism, speculative fabulation, so far—Staying with the Trouble further cements Haraway's reputation as one of the most daring and original thinkers of our time.
