Power Window Won't Work

Diagnosing with a simple continuity test

The right rear switch does not control this window

Evidence The master switch controls all windows except right rear

Evidence The Master switch does have good ground

Evidence The Motor works when we provide power & ground
Evidence The suspect switch is NOT the problem
The switch MUST be disconnected from the vehicle's power because our DVOM will provide power.
If the vehicle provided power it would interfere with our test
Evidence The Red/Black wire has good continuity
