Manual of the Birds of New Zealand - Scholar's Choice Edition

Perfect for birdwatching enthusiasts travelling to Indonesia, this concise guide is full of interesting information. This practical handbook, by an acknowledged authority, intended primarily for the field student, tells him how to identify and name the birds of Indonesia which he encounters, and what kinds of birds he can expect to find on each island. There is also a condensed summary of the present knowledge of distribution, geographical variation and habits. Whenever feasible, keys have been supplied to facilitate identification. These keys are simply and clearly worked out for the beginner who may not know the difference between a curlew and a godwit, or a triller and a graybird. Three magnificent color plates show 39 species which include at least one representation of all of the prominent bird families of the southwest Pacific. A series of black and white drawings show additional species. These pictures will be particularly valuable to bird students who have never seen a wood swallow, a flower pecker, a white-eye or a triller.

This book describes how man-made litter, primarily plastic, has spread into the remotest parts of the oceans and covers all aspects of this pollution problem from the impacts on wildlife and human health to socio-economic and political issues. Marine litter is a prime threat to marine wildlife, habitats and food webs worldwide. The book illustrates how advanced technologies from deep-sea research, microbiology and mathematic modelling as well as classic beach litter counts by volunteers contributed to the broad awareness of marine litter as a problem of global significance. The authors summarise more than five decades of marine litter research, which receives growing attention after the recent discovery of great oceanic garbage patches and the ubiquity of microscopic plastic particles in marine organisms and habitats. In 16 chapters, authors from all over the world have created a universal view on the diverse field of marine litter pollution, the biological impacts, dedicated research activities, and the various national and international legislative efforts to combat this environmental problem. They recommend future research directions necessary for a comprehensive understanding of this environmental issue and the development of efficient management strategies. This book addresses scientists, and it provides a solid knowledge base for policy makers, NGOs, and the broader public.

Park Science

In the name of agriculture, urban growth, and disease control, humans have drained, filled, or otherwise destroyed nearly 87 percent of the world's wetlands over the past three centuries. Unintended consequences include biodiversity loss, poor water quality, and the erosion of cultural sites, and only in the past few decades have wetlands been widely recognized as worth preserving. Emily O'Gorman asks, What has counted as a wetland, for whom, and with what consequences? Using the Murray-Darling Basin—a massive river system in eastern Australia that includes over 30,000 wetland areas—as a case study and drawing on archival research and original interviews, O'Gorman examines how people and animals have shaped wetlands from the late nineteenth century to today. She illuminates deeper dynamics by relating how Aboriginal peoples acted then and now as custodians of the landscape, despite the policies of the Australian government; how the movements of water birds affected farmers; and how mosquitoes have defied efforts to fully understand, let alone control, them. Situating the region's history within global environmental humanities conversations, O'Gorman argues that we need to understand wetlands as socioecological landscapes in order to create new kinds of relationships with and futures for these places.

2023 Mary Nickliss Prize in U.S. Women's and/or Gender History Winner The first biography of trailblazing legislator Patsy Takemoto Mink, best known as the legislative champion of Title IX “Every girl in Little League, every woman playing college sports, and every parent—including Michelle and myself—who watches their daughter on a field or in the classroom is forever grateful to the late Patsy Takemoto Mink.”—President Barack Obama, on posthumously awarding Mink the Presidential Medal of Freedom in 2014 Patsy Takemoto Mink was the first woman of color and the first Asian American woman elected to Congress. *Fierce and Fearless* is the first biography of this remarkable woman, who first won election to Congress in 1964 and went on to serve in the House for twenty-four years, her final term ending with her death in 2002. Mink was an advocate for girls and women, best known for her work shepherding and defending Title IX, the legislation that changed the face of education in America, making it possible for girls and women to participate in school sports, and in education more broadly, at the same level as boys and men. Mink's life is wonderfully chronicled by eminent historian Judy Tzu-Chun Wu and Gwendolyn Mink, Patsy's daughter, a noted political science scholar and first-hand witness to the many political struggles that her mother had to overcome. Featuring family anecdotes, vignettes, and photographs, *Fierce and Fearless* offers new insight into who Mink was, and the progressive principles that fueled her mission. Wu and Mink provide readers with an up-close understanding of her life as a third-generation Japanese American from Hawaii—from her childhood on Maui to her decades-long career in the House, working with noted legislators like Shirley Chisholm, Bella Abzug, and Nancy Pelosi. They follow the evolution of her politics, including her advocacy for race, gender, and class equality and her work to promote peace and environmental justice. *Fierce and Fearless* provides vivid details of how Patsy Takemoto Mink changed the future of American politics. Celebrating the life and legacy of a woman, activist, and politician ahead of her time, this book illuminates the life of a trailblazing icon who made history.

Bulletin of the Atomic Scientists

Changes in seasonal movements and population dynamics of migratory birds in response to ongoing changes resulting from global climate changes are a topic of great interest to conservation scientists and birdwatchers around the world. Because of their dependence on specific habitats and resources in different geographic regions at different phases of their annual cycle, migratory species are especially vulnerable to the impacts of climate change. In *Bird Migration and Global Change*, eminent ecologist George W. Cox brings his extensive experience as a scientist and bird enthusiast to bear in evaluating the capacity of migratory birds to adapt to the challenges of a changing climate. Cox reviews, synthesizes, and interprets recent and emerging science on the subject, beginning with a discussion of climate change and its effect on habitat, and followed by eleven chapters that examine responses of bird types across all regions of the globe. The final four chapters address the evolutionary capacity of birds, and consider how best to shape conservation strategies to protect migratory species in coming decades. The rate of climate change is faster now than at any other moment in recent geological history. How best to manage migratory birds to deal with this challenge is a major conservation issue, and *Bird Migration and Global Change* is a unique and timely contribution to the literature.

This book tells of one of the most expansive and rapid phases of human migration in prehistory, a period during which Polynesians reached and settled nearly every archipelago scattered across some 28 million square kilometres of the Pacific Ocean, an area now known as East Polynesia. Through an engaging narrative and over 400 maps, diagrams, photographs, and illustrations, Crowe conveys some of the skills, innovation, resourcefulness, and courage of the people that drove this extraordinary feat of maritime expansion. In this masterful work, Andrew Crowe integrates a diversity of research and viewpoints in a format that is both accessible to the lay reader and required reading for any serious scholar of this fascinating region.

Pacific Conservation Biology

The use of wildlife products, together with advances in livestock feeding, were essential in propelling Western economic growth. Extraordinarily, these early modern and early industrial features are side-lined relative to the role of manufacturing. This book restores the balance, detailing how many species were relocated around the world and how late natural products persisted into the age of synthetics. This text describes how animals were driven immense distances to market and harnessed for transportation and to power machines; even after industrialisation, animals were employed for innumerable purposes, besides being co-opted as pets. The recent rebound from a wholesale persecution of wild nature, and how the plundering of the animal kingdom and the development of livestock farming jointly created the Smithian Growth that ushered in the Industrial Revolution, are also described.

Wetlands in a Dry Land

Is migration really so constructive that, as Ralph Emerson (1909) once wrote, in the context of the New World, "asylum of all nations . . . will construct a new race, a new religion, a new state, a new . . . smelting-pot"? (WK 2012) This noble lie—the "melting pot" in the 20th century—can be contrasted with an opposing noble lie of the "salad bowl" in the 21st century, when those in multiculturalism like Tariq Modood (2007) argue nowadays that multiculturalism "is most timely and necessary, and . . . we need more not less." (WK 2012a) Contrary to these opposing noble lies (and other views as will be discussed in the book), migration, in relation to both the Same and the Others, is neither possible or impossible, nor desirable or undesirable, to the extent that the respective ideologues on different sides would like us to believe. Surely, this exposure of the opposing noble lies about migration does not mean that the specific field of study on migration is a waste of time, or that those interdisciplinary fields (related to the study of migration) like animal migration, gene migration, diaspora politics, cultural assimilation, human trafficking, urbanization, brain drain, tourism, ethnic cleansing, environmental migration, globalization, religious persecution, national identity, gentrification, fifth column, migration art, xenophobia, space colonization, multiculturalism, and so on are worthless. Needless to say, neither of these extreme views is reasonable. Instead, this book offers an alternative, better way to understand the future of migration, especially in the dialectic context of the Same and the Others—while learning from different

approaches in the literature but without favoring any one of them or integrating them, since they are not necessarily compatible with each other. More specifically, this book offers a new theory (that is, the theory of the cyclical progression of migration) to go beyond the existing approaches in a novel way. If successful, this seminal project is to fundamentally change the way that we think about migration in relation to Sameness, Otherness, and identity, from the combined perspectives of the mind, nature, society, and culture, with enormous implications for the human future and what the author originally called its “post-human” fate.
