Managerial Economics and Strategy

Intended primarily for Managerial Economics courses, this text also provides practical content to current and aspiring industry professionals. Economics is a powerful tool that can help managers to manage effectively. In Managerial Economics Jeffrey Perloff and James Brander use real-world issues and examples from actual markets to show future managers how economic principles can be used in business decisions. In text examples and boxed mini-cases use actual data to illustrate how to use basic models. For example, to illustrate rivalry in oligopolistic markets, the authors look at rivalry between United and American Airlines and between Coke and Pepsi. Mini-case examples include why American Apparel is vertically integrated and why upscale manufacturers limit the number of designer hand-bags a customer is allowed to buy. To help future managers learn to solve new problems, Perloff and Brander repeatedly demonstrate problem-solving through in-text Q&As. Each Q&A poses an important managerial or economic issue and demonstrates how to solve it using a step-by-step approach. Estrin: Microeconomics

The relevance of microeconomics shown through real-world business examples. One of the challenges of teaching principles of microeconomics is fostering interest in concepts that may not seem applicable to students' lives. Microeconomics makes this topic relevant by demonstrating how real businesses use microeconomics to make decisions every day. With ever-changing US and world economies, the 7th Edition has been updated with the latest developments using new real-world business and policy examples. Regardless of their future career path -- opening an art studio, trading on Wall Street, or bartending at the local pub, students will benefit from understanding the economic forces behind their work.

Microeconomics

The substantial prosperity that characterizes market economies at the beginning of the twenty-first century is relatively recent in human history. Prior to the Industrial Revolution, economic progress was so slow that people would not have been able to recognize it in their lifetimes, whereas today, economic progress is so much a part of people's lives that they take it for granted. In this new volume, Randall G. Holcombe argues that economic analysis, as it developed through the twentieth century, relies heavily on concepts of economic equilibrium, and is not descriptive of the dynamic real-world economy that is characterized by economic progress. Even in dynamic settings, economic models focus on income growth, leaving out the entrepreneurial forces that generate economic progress, resulting in the introduction of new goods and services and new production processes. Economic analysis focuses on the forces that lead to an economic equilibrium, not the forces that produce prosperity. This characterization of economic analysis describes a substantial component of economics as it has developed over the past century. However, there are also economists who have analyzed the factors that lead to an entrepreneurial and innovative economy, generating progress rather than equilibrium. This volume does not question the value of past research, but argues that, looking ahead, economics should build on its past to focus on factors that create an entrepreneurial and innovative economy that is characterized by progress and prosperity. This would make economic analysis more consistent with the remarkable progress and prosperity that characterizes the modern economy. This volume lays out a framework for economic analysis that consistently incorporates the real-world factors that produce prosperity.

The difficulties in determining the quality of information on the Internet--in particular, the implications of wide access and questionable credibility for youth and learning. Today we have access to an almost

inconceivably vast amount of information, from sources that are increasingly portable, accessible, and interactive. The Internet and the explosion of digital media content have made more information available from more sources to more people than at any other time in human history. This brings an infinite number of opportunities for learning, social connection, and entertainment. But at the same time, the origin of information, its quality, and its veracity are often difficult to assess. This volume addresses the issue of credibility--the objective and subjective components that make information believable--in the contemporary media environment. The contributors look particularly at youth audiences and experiences, considering the implications of wide access and the questionable credibility of information for youth and learning. They discuss such topics as the credibility of health information online, how to teach credibility assessment, and public policy solutions. Much research has been done on credibility and new media, but little of it focuses on users younger than college students. *Digital Media, Youth, and Credibility* fills this gap in the literature. Contributors Matthew S. Eastin, Gunther Eysenbach, Brian Hilligoss, Frances Jacobson Harris, R. David Lankes, Soo Young Rieh, S. Shyam Sundar, Fred W. Weingarten
