Management Information Systems - Management Information Systems by GreggU 27,464 views 3 years ago 13 minutes, 21 seconds - Organizations use computers and **information systems**, to

reduce costs and gain a competitive advantage in the marketplace.

Intro

PDA Many workers are now telecommuters who perform their jobs at home, and others often use their personal digital assistants (PDAs) to conduct business while on the go.

Information literacy, on the other hand, is understanding the role of information in generating and using business intelligence.

HARDWARE The hardware components include input, output, and memory devices and vary depending on the application and the organization.

PROCESSES Processes are usually methods for performing a task in an MIS application.

DATA The data component of an information system is considered the input to the system.

FUTURE DATA In addition, future data is predicted for budgets or cash flow reports.

AGGREGATED Aggregated data can be useful for reporting over- all performance during a particular sales quarter, for example, but it limits the ability of decision makers to focus on specific factors.

GOALS If an organization has defined its strategic goals, objectives, and critical success factors, then structuring the data component to define what type of data is collected and in what form is usually easy.

RELEVANT DATA A database, the heart of an information system, is a collection of all relevant data organized in a series of integrated files.

DATABASE A comprehensive database is essential for the success of any information system.

REDUCING TIME Databases are also important for reducing personnel time needed to gather, process, and interpret data manually.

DECISION MAKING The purpose of an information system's process component is generating the most useful type of information for making decisions.

The quality of information is determined by its usefulness to users, and its usefulness determines the success of an information system.

INSIGHTS If information lacks any of these qualities, the results are incorrect decisions, misallocation of resources, and overlooked windows of opportunity.

HRIS A personnel information system (PIS) or human resource information system (HRIS) is designed to provide information that helps decision makers in personnel carry out their tasks more effectively.

DECISIONS • Choosing the best job candidate • Scheduling and assigning employees • Predicting future personnel needs • Providing statistics on employee demographics • Allocating human and financial resources

The goal of a financial information system (FIS) is to provide information to financial executives in a timely manner.

STRATEGIES Information systems can help organizations reduce the cost of products and services and, if designed correctly, they can assist with differentiation and focus strategies.

EXECUTIVES The top information systems job belongs to either the chief technology officer (CTO) or the chief information officer (CIO).

IMPLEMENTATION This person is responsible for the design and implementation of information systems.

NETWORK This person oversees a company's internal and external network systems, designing and implementing network systems that deliver correct information to the right decision maker in a timely manner.

ADMINISTRATOR A database administrator (DBA) is responsible for data-base design and implementation, Additionally, a database administrator should have knowledge and understanding of data warehouses and data-mining tools.

PROGRAMMER A computer programmer writes computer programs or software segments that allow the information system to perform a specific task.

Picking parts - Coolers

Picking parts - Thermal compound

Picking parts - PSU

Picking parts - Case

Picking parts - Fan types and use cases

Picking parts - Fan sizes and connectors

Picking parts - Hard drives

Picking parts - RGB

Picking parts - Tools and supplies

Step 2: Setting up your work area

Setting up - Static safety

Step 3: Motherboard & CPU Install

Motherboard - Inspecting LGA pins

Motherboard - Installing the CPU (LGA)

Motherboard - Installing the CPU (PGA)

Motherboard - Installing the CPU (HEDT/servers)

Step 4: Memory Install & arrangements

Memory - Installation procedure

Step 5: M.2 SSD Install & considerations

SSD - Installation procedure

Cooler - Air mount setup (consumer sockets)

Cooler - Air mount setup (HEDT/servers)

Cooler - Thermal compound application (consumer sockets)

Cooler - Thermal compound application (HEDT/servers)

Cooler - Mounting air coolers

Cooler - CPU fan headers

Cooler - Pre-build test liquid mount setup

Step 7: Pre-build test setup

First power up

Bench troubleshooting

Step 8: Case preparation

Case prep - Motherboard standoffs

Step 9: Motherboard Installation

Motherboard - Front panel header

Motherboard - Front I/O (Audio)

Motherboard - Front I/O (USB 2.0)

Motherboard - Front I/O (USB 3.x)

Motherboard - "Front" I/O (Legacy)

Step 10: Storage (2.5" & 3.5")

Storage - SATA data cables

Step 11: Fans & Cooling

Fans & Cooling - Radiator setup & mounting

Fans & Cooling - Fan control & power distribution

Step 12: Power Supply

Power Supply - Mounting to the case

Power Supply - Wiring

Step 13: Graphics Card

Graphics Card - Other cards & anti-sag

Graphics Card - Power

Step 14: Cable Management

Step 15: Powering on & Troubleshooting

Common BIOS settings & booting your OS
