also occurs. New outbreaks of yellow fever have occurred in Colombia and Trinidad and new outbreaks of rift valley fever have occurred in Egypt. Chapter 6, Arenaviruses: The biochemical and physical properties have now been clarified, and they show a remarkable uniformity in the various viruses constituting the group. The possibility that prenatal infection with LCM may result in hydrocephalus and chorioretinitis has been raised. Serologic surveys have suggested the existence of Lassa virus infection in Guinea, Central African Empire, Mali, Senegal, Cameroon, and Benin, in addition to earlier identification in Nigeria, Liberia, and Sierra Leone. Chapter 7, Coronaviruses: New studies have confirmed the important role of these viruses in common respiratory illnesses of children and adults. The viruses are now known to contain a single positive strand of RNA. About 50% of corona virus infections result in clinical illness. About 5% of common colds are caused by strain DC 43 in winter. Chapter 8, Cytomegalovirus: Sections on pathogenesis of CMV in relation to organ transplantation and mononucleosis, as well as sections on the risk and features of congenital infection and disease, have been expanded. There are encouraging preliminary results with a live CMV vaccine, but the questions of viral persistence and oncogenicity require further evaluation.

Pediatric respiratory disorders are responsible for a number of acute and chronic health conditions and are a leading cause of pediatric emergency room visits and hospitalizations. More than ever, nurses and nurse practitioners must have an understanding of the anatomy, pathophysiology, diagnosis and state of the art treatments in pediatric respiratory disease as they are often the first to come in contact with and recognize respiratory problems in children. Nursing Care in Pediatric Respiratory Disease seeks to provide both nurses and nurse practitioners with this information in order to aid them in the diagnosis and treatment of children suffering from acute and chronic respiratory disorders. Nursing Care in Pediatric Respiratory Disease opens with an overview of the anatomy and physiology of the respiratory system, best practices for assessing respiratory symptoms in children, and common respiratory therapies and treatment methods. It then proceeds through an examination of varying acute and chronic upper and lower respiratory diseases spanning from asthma and cystic fibrosis to vocal cord paralysis and sinusitis in both hospital and ambulatory settings. Nursing Care in Pediatric Respiratory Disease provides nurses and other health care providers with a comprehensive and practical resource which allows them to collaborate and advocate more effectively, as well as educate both the family and child in management of respiratory disorders.

CONTEMPORARY ACCOUNTS IN DRUG DISCOVERY AND DEVELOPMENT A useful guide for medicinal chemists and pharmaceutical scientists Drug discovery is a lengthy and complex process that typically involves identifying an unmet medical need, determining a biological target, chemical library screening to identify a lead, chemical optimization, preclinical studies and clinical trials. This process often takes many years to complete, and relies on practitioners' knowledge of chemistry and biology, but also—and perhaps more importantly—on experience. Improving the success rate in discovery and development through a thorough knowledge of drug discovery principles and advances in technology is critical for advancement in the field. Contemporary Accounts in Drug Discovery and Development provides drug discovery scientists with the knowledge they need to quickly gain mastery of the drug discovery process. A thorough accounting is given for each drug covered within the book, as the authors provide pharmacology, drug metabolism, biology, drug development, and clinical studies for every case, with modern drug discovery principles and technologies incorporated throughout. Contemporary Accounts in Drug Discovery and Development readers will also find Case histories used as an engaging way of learning about the drug discovery/development process Detailed biological rational and background information, drug design principles, SAR development, ADMET considerations, and clinical studies The full history of individual marketed small molecule drugs Coverage of drug candidates that have passed Phase I clinical trials with different modalities, such as antibody

drug conjugates (ADC), proteolysis-targeting chimera (PROTAC), and peptide drugs The application of new technologies in drug discovery such as DNA-encoded libraries (DEL), positron emission tomography (PET), and physics-based computational modeling employing free energy perturbation (FEP) Contemporary Accounts in Drug Discovery and Development is a helpful tool for medicinal chemists, organic chemists, pharmacologists, and other scientists in drug research and process development. It may be considered essential reading for graduate courses in drug discovery, medicinal chemistry, drug synthesis, pharmaceutical science, and pharmacology. It is also a useful resource for pharmaceutical industry labs, as well as for libraries.

Mandell, Douglas and Bennett's Principles and Practice of Infectious Diseases

This book describes a practical approach to the diagnosis, management, and prevention of infectious complications in solid-organ transplant (SOT) candidates and recipients, based on both up-to-date clinical evidence and state of the art expert opinion from world-renowned experts in the field. The book is divided into three parts, the first of which explains risk assessment and the general approach to infectious diseases in the pre-, peri-, and early and late post-transplant periods. The remaining two sections address the prevention and treatment of infection with particular pathogens and the management of specific syndromes, such as pneumonia, CNS infections, UTIs, and skin infections. Infections in SOT recipients – often due to multidrug-resistant organisms – represent a major challenge. Preventive strategies need to be adapted according to the type of allograft and period after transplantation. Moreover, toxicity and drug interaction with immunosuppressive drugs must be taken into consideration when treating infectious complications. In explaining in depth how best to ensure allograft and patient survival, this book will be of value to infectious disease specialists and transplant physicians at all levels of experience.

Automated Peritoneal Dialysis

While continuous ambulatory peritoneal dialysis (CAPD) has been the standard peritoneal procedure since the seventies, different schedules of automated peritoneal dialysis (APD) have emerged during the eighties. Today, APD is considered a valuable tool in the management of ESRD patients, together with CAPD and hemodialysis. However, despite its frequent use, APD has not yet been well assessed, and most pathophysiological and clinical studies on PD refer to CAPD. In this book, major experts in the field therefore discuss and evaluate the insights gained on APD up to now, presenting a comprehensive review of all experimental, technical and clinical aspects related to the various treatments grouped under the definition of APD. The recent developments presented are divided into four sections: membrane permeability, transport mechanisms and kinetic modeling applied to APD; prescription and adequacy of different APD treatment schedules; dialysis machines and solutions for APD, and, lastly, different clinical aspects such as the possibility to maintain APD program and residual renal function. Physicians involved in ESRD care, renal fellows and scientists both in the academic world and in the hospital setting will undoubtedly profit from this timely publication.

Remote Patient Management in Peritoneal Dialysis

Telemedicine and remote patient monitoring are innovative tools to provide remote transmission, interpretation, and storage of data for review by the care team. These tools allow for accurate home monitoring of patients enabling the team to improve care through prevention and early identification of problems. This book is structured into four main parts. The first describes the evolution of peritoneal dialysis and related technology. The second part summarizes current unmet clinical needs reported by patients and care teams, the need for innovation in the field, and the technical and clinical issues involved with the modern management of peritoneal dialysis. The third section presents the operational characteristics of the new information communication technology system and, in detail, the features of the Sharesource platform. Finally, a series of field experiences by expert users are reported to describe the benefits and the potential applications of remote patient monitoring in the future. Telemedicine and remote patient monitoring have proven to be useful in the care of patients on peritoneal dialysis. The scope of this publication, therefore, is to present the experiences of clinical key opinion leaders who have been using the application.

The Textbook of Peritoneal Dialysis

In 1986 the first edition of Continuous Ambulatory Peritoneal Dialysis, edited by R. Gokal, was published. In 1989 the third edition of Peritoneal Dialysis, edited by K.D. Nolph, was published. Both books were widely recognized for their comprehensive discussion of this particular field. Rather than edit new editions of each of these books separately, two of the most prominent figures in this field have decided to combine their knowledge and enthusiasm in this single book: The Textbook of Peritoneal Dialysis. The book is unique in its detailed discussion of a complete range of topics, including new advances in our understanding of the physiology of peritoneal dialysis, peritoneal dialysis kinetics, clinical results and a chapter dealing with the concepts of intraperitoneal chemotherapy. These examples of the dynamic nature of the field further illustrate the importance of this textbook, and make it required reading for everybody working within the field of peritoneal dialysis.

Continuous Ambulatory Peritoneal Dialysis - ECAB

Continuous ambulatory peritoneal dialysis (CAPD) was introduced by Popovich et al. in 1976, with 4–6 exchanges per day and long dwell time between the exchanges. Later, a group from Seattle used the combination of cyclic and automated PD in their patients and then it was called as continuous automated ambulatory peritoneal dialysis (CAAPD). Later in 1981, this technique was given the name continuous cycling peritoneal dialysis (CCPD) by Diaz-Buxo. Currently, over 130,000 patients are on CAPD worldwide, and it is the most popular form of peritoneal dialysis. This book on continuous ambulatory peritoneal dialysis is designed to address the various clinical decision questions supported by typical clinical scenarios, with which all readers will be able to identify. Thus, it provides an excellent opportunity to widen one's perspective in this area.

CAPD Update

For more than a generation haemodialysis has been the principal method of treating patients with both acute and chronic renal failure. Initially, developments and improvements in the system were highly

technical and relevant to only a relatively small number of specialists in nephrology. More recently, as advances in therapy have demonstrated the value of haemofiltration in the intensive therapy unit and haemoperfusion for certain types of poisoning, the basic principles of haemodialysis have been perceived as important in many areas of clinical practice. In this volume, the potential advantages of bicarbonate haemodialysis are objectively assessed, the technical and clinical aspects of both haemofiltration and haemoperfusion discussed and the continuing problems associated with such extra corporeal circuits analysed. All the chapters have been written by recognized experts in their field. The increasing availability of highly technical facilities for appropriately selected patients should ensure that the information contained in the book is relevant not only to nephrologists but to all practising clinicians. ABOUT THE EDITOR Dr Graeme R. D. Catto is Professor in Medicine and Therapeutics at the University of Aberdeen and Honorary Consultant Physician/Nephrologist to the Grampian Health Board. His current interest in transplant immunology was stimulated as a Harkness Fellow at Harvard Medical School and the Peter Bent Brighton Hospital, Boston, USA. He is a member of many medical societies including the Association of Physicians of Great Britain and Ireland, the Renal Association and the Transplantation Society.

Continuous Ambulatory Peritoneal Dialysis

The Fourth International Congress of Peritoneal Dialysis was held in Venice, Italy, June 29 to July 2, 1987. By this time peritoneal dialysis had emerged as a treatment for a substantial fraction of patients with end-stage renal disease and countless numbers of patients with acute renal failure. This treatment is now practiced worldwide and is the life-sustaining treatment for about 40,000 patients with chronic renal failure, representing 15 to 20% of dialysis therapy in about 1000 centers. It is not surprising, therefore, that the number of health professionals engaged in the investigation and the application of the treatment has also grown exponentially. The First International Symposium on Peritoneal Dialysis, organized by Dr. A. Treviño-Beccerra in Chapala, Mexico, in 1978, brought together a group of pioneers when continuous ambulatory peritoneal dialysis was in its infancy. In 1981, Dr. G. M. Gahl chaired the Second Symposium, in West Berlin, when the technique and professional interest were growing considerably. By 1984, when Dr. I. F. Winchester and I organized the Third Symposium, the presented papers exceeded 100 and there were about 1000 attendees. At that time, it was deemed appropriate to form a more organized group and the International Society for Peritoneal Dialysis was founded. One of the first actions of the Society was to choose from among several applicants Dr.

Ambulatory Peritoneal Dialysis

During the past quarter century there has been a renaissance of interest in the use of peritoneal dialysis as the primary dialytic modality for the treatment of children with end-stage renal disease (ESRD). The development of continuous ambulatory peritoneal dialysis (APD) has facilitated the provision of prolonged dialysis to infants, children and adolescents and has provided pediatric nephrologists worldwide with a real opportunity to administer effective dialysis therapy to all patients afflicted with ESRD. It has been more than a decade since the initial publication of CAPD/CCPD in Children. In the interim, a great deal of clinical experience with patients receiving peritoneal dialysis has been accumulated and research efforts have substantially increased our understanding of the technique. Therefore, we felt that a second edition of CAPD/CCPD in Children was propitious to update the advances of the past decade.

CAPD/CCPD in Children

In 1994, the expert knowledge of Ram Gokal and Karl D. Nolph, the two foremost figures in the field of peritoneal dialysis, was combined to produce the first edition of the Textbook of Peritoneal Dialysis. The work quickly became recognised as the 'gold standard' for those working in the field. Since its conception, however, our understanding of peritoneal dialysis related physiology, kinetics and clinical outcomes, as well as the concepts of intraperitoneal chemotherapy, has increased sufficiently to make an updated and completely revised edition of the work necessary. An expansion of the editorial team by fellow-experts Ramesh Khanna and Raymond Krediet enabled an even more comprehensive approach to be taken. This second edition reasserts the book's uniqueness in its detailed discussion of the topic, making it required reading for all those working within the field of peritoneal dialysis.

Textbook of Peritoneal Dialysis

A year or so after Dr. Robert Popovieh arrived in Seattle in 1965 to begin working on his doctoral thesis under Dr. A.L. Babb, we had just begun work to try to prove the prediction that the peritoneum had a higher permeability to 'middle molecules' than hemodialysis membranes [1]. Several years later, when Dr. Popovieh accepted a position at the University of Texas in Austin, he decided to concentrate his research efforts in the area of peritoneal dialysis and everyone knows how successful that effort has become [2]. Indeed, because of continuous ambulatory peritoneal dialysis (CAPD), long-term peritoneal dialysis after a two-decade incubation period is finally becoming an equal option to hemodialysis and transplantation in the management of chronic renal failure. For me this development represents final vindication of a twenty-year effort to help promote peritoneal dialysis, often in the face of enormous opposition. I particularly remember a policy meeting at the NIH a few years back in which it was decided by my colleagues on the committee that long term peritoneal dialysis had no future and therefore no funds for projects in this area would be forthcoming. Based on the excellent results that Boen and later Tenckhoff had been getting in our Seattle program, I knew the committee was wrong and tried to convince them otherwise. Naturally, being the only favorable vote, I failed. I often wonder how many years this decision and others like it set back peritoneal dialysis.

Continuous Ambulatory Peritoneal Dialysis

During the past decade, there has been a renaissance of interest in the use of peritoneal dialysis as a primary dialytic modality for the treatment of children with end stage renal disease (ESRD). The development of the technique of continuous ambulatory peritoneal dialysis (CAPD) and continuous cycling peritoneal dialysis (CCPD) has markedly changed the approach to children requiring dialytic therapy. The availability of these techniques has facilitated prolonged dialysis in infants and has for the first time given pediatric nephrologists in many areas of the world an opportunity to consider dialysis in children afflicted with ESRD. I have enlisted the collaboration of colleagues from Europe, South America, Canada, and the United States in compiling this multidisciplinary text, which hopefully contains the most up-to-date, comprehensive information regarding the use of CAPD/CCPD in children. It is my hope that every nephrologist (pediatric and adult); nephrology nurse (pediatric and adult); nephrology technician, or allied health professional dealing with children who require these therapeutic modalities will be able to resolve immediately any confounding clinical or technical issues that arise by using the information contained in this text. Demographic data on the use of CAPD/CCPD in children in Europe is provided from the EDTA Registry and in the United States from the National Peritoneal Dialysis Registry. The particular problems encountered in the use of CAPD in children in developing countries is detailed by Dr. Grunberg and his colleagues in Uruguay.

Peritoneal Dialysis

Even though peritoneal dialysis (PD) is by now well established and its advantages in terms of clinical efficacy, social impact and individual tolerance are acknowledged, it is still underutilized on a global scale. In view of this fact, the publication at hand has two objectives, namely to provide help to identify possible obstacles to a wider application of PD and to advance a project called USS PD: Understanding, Starting and Sustaining Peritoneal Dialysis (initiated by the Department of Nephrology, Dialysis and Transplantation of the St. Bortolo Hospital in Vicenza, Italy). The initial part of this book is thus dedicated to basic principles of PD, as understanding how this technique works is one of the prerequisites to improve the quality of its application and, ultimately, its outcomes. In the second part, in-depth reviews help the physician to identify the benefits and problems involved in a PD program, facilitating the initiation of a new program or the start of new patients on PD. The third part, finally, is dedicated to potential complications and technical solutions designed to solve the problems of the different techniques. This helps physicians to sustain the use of PD after having acquired the know how and the capacity of starting the program. Everyone interested in understanding and implementing PD will highly profit from the papers presented in this publication.

Chronic Ambulatory Peritoneal Dialysis (CAPD) and Chronic Cycling Peritoneal Dialysis (CCPD) in Children

Nolph and Gokal's Text Book of Peritoneal Dialysis, Third Edition, covers advances made in the field for the past 30 years. During the past two decades, the time during which this therapy has been increasingly utilized, this text has continued to be recognized as the major source of the discipline's base knowledge. The evolution of this text to its newest edition parallels the growth of peritoneal dialysis from Continuous Ambulatory Peritoneal Dialysis in the eighties to the current therapy that encompasses

manual and automated therapies with full emphasis on adequacy of dialysis dose. Peritoneal dialysis represents an intracorporeal technique for blood purification. This unique dialysis system represents one of many human attempts to manipulate nature for sustenance of life. The past few years of advances have focused on further improvement of the technique. Areas that have fueled the interest of researchers include: (1) Physiology of high transporters (and the role of genetics and inflammation); (2) Continued debate over the most appropriate adequacy indices (small solute clearances, large solute clearances, clinical assessment etc.); (3) Understanding, preventing and treating the MIA syndrome in PD patients (including the roles of leptin, and adiponectin); (4) Pathogenesis and newer management strategies of vascular calcification; (5) Continued improvements in infectious complications including peritonitis; (6) Further improvements in catheter technology; (7) Automated techniques; (8) Explaining and correcting PD underutilization; (9) Rationale and applications of newer dialysis solutions; (10) New understanding and approaches to management of osteodystrophy; (11) Refinements in anemia management including new insights in iron metabolism in PD patients; (12) Further definition of indications for PD; (13) The ideal time to initiate dialysis. Newer insight into host defense mechanisms have also made the past decade of advances in the field more meaningful for clinicians. This text also covers the knowledge gained from animal models of peritoneal dialysis. Nolph and Gokal's Textbook of Peritoneal Dialysis, Third Edition is a compilation of the latest knowledge in the field. It cites and describes in great detail, the new discoveries and the evolution of understanding the subject of these discoveries.

The Final Report of the USA CAPO Registry summarizes eight years of observation and analysis that reflects the experiences of 485 clinical centers and over 25,000 CAPO patients. As such, it offers a wealth of information, available here for the first time to interested parties around the world. Because the National Institutes of Health was quick to see the potential of CAPO as a promising therapy for patients with end stage renal disease, the Registry project was begun soon after its introduction into clinical practice in the USA. Accordingly, the Registry offered the nephrology community in the United States a special opportunity to study this emerging new therapy in some detail, an opportunity not previously available for any other form of dialysis. As will be seen in this report, the result of this early and intensive research effort has been the development of a vast amount of clinically important information regarding the utilization, safety, and efficacy of this important dialytic therapy.

Dialysis in the eighties to the current therapy that encompasses manual and automated therapies with full emphasis on adequacy of dialysis dose. Nolph and Gokal's Textbook of Peritoneal Dialysis is the most in-depth publication on this dialysis technique and is an ideal resource for all clinicians practicing peritoneal dialysis.

The Effectiveness and Costs of Continuous Ambulatory Peritoneal Dialysis (CAPD)

Peritoneal dialysis (PD) is a valid renal replacement therapy when incorporated in an overall integrated care programme for end-stage renal disease patients. Despite this fact, PD has not yet been established as a true long-term dialysis modality. This practical handbook offers sensible advice as well as detailed information on virtually all clinical and pathophysiological aspects of PD in a readily accessible format and explains the complexities of PD in a clear but still scientific and comprehensive way. Due to its handy size it fits in a white coat pocket of a nephrologist visiting a PD patient during rounds or in the outpatient ambulatory setting. Nephrologists, residents in nephrology and internal medicine, and all other health care workers - nurses, pharmacists, dieticians, intensivists, and medical students - involved with patients suffering from end-stage renal disease will find this book very helpful for understanding the scientific background of PD.

Continuous Ambulatory Peritoneal Dialysis in the USA

This book aims to educate general and vascular surgeons on all pertinent aspects of peritoneal dialysis (PD). Most surgeons get very little training in residency on this topic, and the use of PD is growing around the world. Much of the book will focus on implantation techniques, especially laparoscopic insertions. The authors will describe the known adjunct procedures that have been shown to decrease dysfunction rates. The aim is to provide greater patient autonomy, a better quality of life, preservation of residual renal function and a higher survival advantage.

Peritoneal Dialysis

Designed for daily use by professionals responsible for caring for patients with renal disease, this long-awaited primer provides a simplified, up-to-date review of peritoneal dialysis. Dealing concisely with all aspects of PD, it is written in such a style that even beginners with elementary knowledge of the subject could benefit from its use, and thus it is the perfect text for trainees or new and junior staff members. It is also an ideal text for nurses, a virtual how-to guide on PD. A book like this one, crafted specifically as a bench text and a learning tool, is hard to find. Emphasis is placed on the plentiful illustrations and tables that immediately clarify and expand upon the text. The illustrations, many in full color, are deftly drawn by one of the foremost medical artists in the world, Bernard Tardieu. Few texts can boast such a cast of distinguished authors. Ramesh Khanna, Karl Nolph, and Dimitrios Oreopoulos are among the most respected practitioners of dialysis.

Nolph and Gokal's Textbook of Peritoneal Dialysis

This book covers some special issues relevant to peritoneal dialysis and is a guide to the clinical practice of peritoneal dialysis. A team of international experts presents the latest information about novel peritoneal solutions, pharmacological preservation of peritoneal membrane, peritoneal dialysis catheters, assessment of volume status in PD patients, management of exit-site infection, microbiology of PD peritonitis, peritoneal dialysis in acute renal failure, and peritoneal dialysis and pregnancy.

Kinetics and System Design of Automated Peritoneal Dialysis

Despite the various advantages of home dialysis compared to in-center hemodialysis, only a fraction of patients in Japan currently opt for peritoneal dialysis or home hemodialysis. However, considerable advances in research and technical improvements have been made lately, advancing the practice of home dialysis therapy in Japan. Japanese research is well-known for its ingenuity and creative energy with regard to the development of new machines and systems for dialysis. New insights regarding peritoneal dialysis and home hemodialysis are presented in the publication at hand: Contributions by leading Japanese experts discuss topics such as educational methods, techniques, tools, novel systems and organization of patients. The book will be of great interest to clinical physicians involved in dialysis care; Moreover, the expertise collected in this volume may contribute to the advancement of home dialysis therapy in a global context.

III. International Symposium on Peritoneal Dialysis

Surgical Aspects of Peritoneal Dialysis

A review of the current state of peritoneal dialysis as therapy for failing kidney functions. It contains coverage of peritoneal dialysis values, regimen and techniques including continuous ambulatory, continuous cycling, nightly peritoneal dialysis and tidal peritoneal dialysis.

The Essentials of Peritoneal Dialysis

Peritoneal dialysis (PD) is in widespread use for the treatment of acute and chronic renal failure. A considerable amount of knowledge about the various procedures and problems associated with this form of treatment has accumulated over recent years, particularly since the introduction of continuous ambulatory peritoneal dialysis (CAPD). However to date the information regarding the more technical or practical aspects of PD has been largely scattered in various books and journals. There appears to be no straightforward text concerned with these points suitable for recommending to junior doctors or nurses dealing with patients receiving this therapy. Though in-house-training is of considerable value it takes time and I have noticed that on a number of occasions in our own unit, technical problems with PD have not been dealt with quickly because of lack of knowledge in the staff on duty. There thus appeared to me to be a need for a short book giving firm advice on how to perform the various procedures and how to deal with problems as they arose. This manual is an attempt to fulfil that aim. Initially it was tried and tested on the renal unit in the Cardiff Royal Infirmary for 3 years. Prior to publishing it has been extensively revised and updated.

Continuous Ambulatory Peritoneal Dialysis

This is a time in history when the concept of Quality is reaching new highs in terms of public awareness. Articles describing quality, CQI, quality tools, critical success factors, failures, and lessons learned appear in local news papers, trade journals, scientific periodicals, and professional publications on a daily basis, yet implementation of a quality system in many hospital units is approached with caution and the basic tenants of quality systems and CQI continue to be misunderstood. In the United States, today, the public debate on healthcare issues rages on. The application of strategies, such as cost-benefit analysis as a means of new technologies to the healthcare cost structure has for evaluating addition not succeeded in curbing the rise in costs of healthcare services. of this focused attention by third-party payers, federal and state Because governments, and insurance companies, healthcare organizations are being of the strategies for changing involves implementing pressured to change. One quality assurance practices. The focus on quality should produce improvements in productivity, innovation, and profitability. But, most importantly, the desired outcome of a quality assurance program is self-improvement.

Some Special Problems in Peritoneal Dialysis

Evolving Strategies in Peritoneal Dialysis is intended as a concise compilation of articles designed to understand the basics of the current practice of the most cost-effective form of life support for patients

with end-stage renal disease who require dialysis. Current strategies are understood best with a review of the historical development of catheter materials, solution packaging, and simplified machinery, which allow safe and effective nocturnal treatments. Quantitation of the efficacy of peritoneal dialysis is also reviewed because such calculations were also developed by the pioneers of nephrology to ensure adequacy of dialysis and daily fluid balance, which are responsible for the best chance for long-term patient survival. Comparison of methods for catheter placement is presented as well as the role that a dialysis center plays in the health and success of this form of end-stage renal disease patient care. The novel concept of assisted peritoneal dialysis for the infirm or institutionalized patients is probably the next direction needed to make available this treatment to many more patients than are currently eligible to receive it. This concept is explored in a separate chapter. Finally, professional dialysis staff must monthly assess individuals' nutritional status, bone health, and infection prevention and treatment to ensure the greatest functional status for these patients. This book concludes with a review of each of these topics to expand the mandatory monthly surveillance performed by dialysis centers for each patient who receives home peritoneal dialysis therapy.
