Ages, Generations and the Social Contract

In this important and timely book, researchers from different countries compare their experiences and offer contrasting views on the future of social protection. They consider the theoretical aspects of the intergenerational debate, relations between generations within the family, the living standards of elderly people, and the question of social time. For the first time in history, three and sometimes four generations are living at the same time; this book examines the new interactions between family change, labour force participation and population ageing.

The Changing Contract Across Generations

Generational conflict has attracted considerable attention in the media and within academic circles during the past decade. At the center of this collection of papers analyzing various facets of that conflict lie complex issues of generational equity--issues that will remain important for the framing of public policy during the 1990s, What do the young and the middle-aged owe the elderly? In discharging that debt, to what extent are they able to provide for their own old age in a climate of changing notions of welfare? What light do the longer perspectives of history shed on these issues? What role do kinship, gender, and economic status play? The papers commissioned by Bengtson and Achenbaum are intended to give greater analytic rigor to current debates. The volume is interdisciplinary not only by theoretical intent but by the practical imperatives of gerontology. More than a dozen sociologists,

economists, historians, demographers, and policy analysts discuss the meanings and ambiguities that are inherent in terms such as "generation," "equity," "compact," "contract," and "conflict," in order to assess how relations between the age groups seem to vary from one sociohistorical context to the next. This distinguished group of contributors raises comparative issues throughout, assessing variations in generational ties by gender, race, class, and geographic location. Several project the extent to which recent changes in the political economy, public philosophy, and demographic structure of most "modern" societies presage greater conflicts, or greater consensus, in family members' relationships and social ties.

The Generational Welfare Contract

This groundbreaking book brings together perspectives from political philosophy and comparative social policy to discuss generational justice. Contributing new insights about the preconditions for designing sustainable, inclusive policies for all of society, the authors expose the possibilities of supporting egalitarian principles in an aging society through balanced generational welfare contracts.

The New Generational Contract

This authoritative text offers the first comprehensive analysis of intergenerational relations and social welfare. It examines both the micro-sociological relations within the family and the social contract which forms the backbone of the welfare state.; This book is intended to appeal to undergraduates and postgraduates in sociology, social policy and medicine and it will also be particularly useful for professional courses such as nursing, social work and gerontology.

What We Owe Each Other

From one of the leading policy experts of our time, an urgent rethinking of how we can better support each other to thrive Whether we realize it or not, all of us participate in the social contract every day through mutual obligations among our family, community, place of work, and fellow citizens. Caring for others, paying taxes, and benefiting from public services define the social contract that supports and binds us together as a society. Today, however, our social contract has been broken by changing gender roles, technology, new models of work, aging, and the perils of climate change. Minouche Shafik takes us through stages of life we all experience—raising children, getting educated, falling ill, working, growing old—and shows how a reordering of our societies is possible. Drawing on evidence and examples from around the world, she shows how every country can provide citizens with the basics to have a decent life and be able to contribute to society. But we owe each other more than this. A more generous and inclusive society would also share more risks collectively and ask everyone to contribute for as long as they can so that everyone can fulfill their potential. What We Owe Each Other identifies the key elements of a better social contract that recognizes our interdependencies, supports and invests more in each other, and expects more of individuals in return. Powerful, hopeful, and thought-provoking, What We Owe Each Other provides practical solutions to current challenges and demonstrates how we can build a better society—together.

Juridical Perspectives between Islam and the West

This comparative philosophy of law book aims at formulating a new analytical approach to the Islamic legal tradition based on 'juridical categories', a concept that facilitates comprehension and understanding of juridical phenomena. Building upon legal comparativism and legal pluralism, this project intends to avoid bias caused by universalizing Western categories when analyzing foreign juridical notions, which inevitably results in the miscomprehension of non-Western ideas and institutions. Unlike existing literature, this project will not focus on substantive comparisons between normative contents, but on the 'juridical perspectives' that helped to shape the Islamic and Western legal orders. The book focuses on the most relevant juridical questions regarding the Islamic and Western legal perspectives, such as

the different visions regarding juridical spatiality, the role of human reason and the relationship between law, man and the divinity. While contributing to legal philosophy, this work intends also to develop and define a new interdisciplinary approach, aiming to provide a starting point for novel analyses in research fields such as legal comparativism, legal pluralism, and constitutional law. Finally, by formulating a new interdisciplinary approach, it will provide a foundational discussion of a continuously evolving subject that will never be exhaustively explored. As such, it aims at broadening scholarly reflections on the relationship between the West and Islam, eventually placing these concepts within a suitably comprehensive and contextualized framework. The Gift of Generations

Modern societies today contend with population dynamics that have never before existed. As the number of older people grows, these countries must determine how best to provide for the needs of this population. The constraints are real: fiscal and material resources are finite and must be shared in a way that is perceived as just. As such, societies confront the fundamental question of who gets what, how, and why, and ultimately must reappraise the principles determining why some people are considered more worthy of help than others. This study systematically explores the Japanese and American answers to this fundamental question. This is the only US-Japan comparative work of its kind, utilizing systematically comparable data from both countries. It also draws on interview material that presents the choices, disappointments, and satisfactions of old age in the individual's own words.

Economics and Ageing

This upper level textbook provides a coherent introduction to the economic implications of individual and population ageing. Placing economic considerations into a wider social sciences context, this is ideal reading not only for advanced undergraduate and masters students in health economics and economics of ageing, but policy makers, professionals and practitioners in gerontology, sociology, health-related sciences, and social care. This volume introduces topics in the economics of happiness, quality of life, and well-being in later life. It also covers questions of inequality and poverty, intergenerational economics, and housing. Other areas described in this book include behavioural economics, political economy, and consumption in ageing societies.

A Shrinking Society

This is the book to focus on a new phenomenon emerging in the twenty-first century: the rapidly aging and decreasing population of a well-developed country, namely, Japan. The meaning of this phenomenon has been successfully clarified as the possible historical consequence of the demographic transition from high birth and death rates to low ones. Japan has entered the post-demographic transitional phase and will be the fastest-shrinking society in the world, leading other Asian countries that are experiencing the same drastic changes. The author used the historical statistics, compiled by the Statistic Bureau, Ministry of Internal Affairs and Communications in 2006 and population projections for released in 2012 by the National Institute of Population and Social Security Research, to show the past and future development of the dependency ratio from 1891 to 2060. Then, utilizing the population life table and net reproduction rate, the effects of increasing life expectancy and declining fertility on the dependency ratio were observed separately. Finally, the historical relationships among women's survival rates at reproductive age, the theoretical fertility rate to maintain the replacement level and the recorded total fertility rate (TFR) were analyzed. Historical observation showed TFR adapting to the theoretical level of fertility with a certain time lag and corresponding to women's survival rates at reproductive age. Women's increasing lifespan and survival rates could have influenced decision making to minimize the risk of childbearing. Even if the theoretical fertility rate meets the replacement level, women's views of minimizing the risk may remain unchanged because for women the cost-benefit imbalance in childbearing is still too high in Japan. Based on the findings, the author discusses the sustainability of Japanese society in relation to national finances, social security reform, family policies, immigration policies and community policies.

Aging and the Life Course

Aging & the Life Course: Social & Cultural Contexts provides an accessible, up-to-date introduction to the study of aging and the life course from a distinctly sociological perspective. It explores the sociocultural dimensions of aging while encouraging critical thinking about the diversity of aging experi-

ences, societal attitudes toward older adults, the politics and economics of growing old, and end-of-life resources. Throughout the text, Deborah Lowry emphasizes the relevance of the material for working with older populations, understanding social policy and policy debates, improving communities, relating to others, and understanding ourselves. Organized into four major sections, Part I introduces students to fundamental demographic, sociological, and life course concepts; part II explores the experiences and conditions of aging, especially in particular groups; and part III presents current research on older adults' engagement in work, family, social networks, and sex. Finally, Part IV addresses themes of aging and social change.

Inequality And Old Age

An analysis of ageing in relation to identity formation, inequality and stratification. The book outlines a theory of social inequality which encompasses those inequalities associated with old age - in addition to class, gender, race and ethnicity.; This book is intended for undergraduate and postgraduate sociology courses in social stratification and social theory, as well as students and researchers in social policy, social welfare and health with an interest in the study of ageing.

Toward a New Social Contract

The growing economic fissures in the societies of Europe and Central Asia between generations, between insiders and outsiders in the labor market, between rural and urban communities, and between the super-rich and everyone else, are threatening the sustainability of the social contract. The institutions that helped achieving a remarkable degree of equity and prosperity over the course of several decades now face considerable difficulties in coping with the challenges presented by these emerging forms of inequality. Public surveys reveal rising concerns over inequality of opportunity, while electoral results show a marked shift to populist parties that offer radical solutions to voters dissatisfied with the status quo. There is no single solution to relieve these tensions, and attempts to address them will vary considerably across the region. However, this publication proposes three broad policy principles: (1) promote labor market flexibility while maintaining protection for all types of labor contracts; (2) seek universality in the provision of social assistance, social insurance, and basic quality services; and (3) expand the tax base by complementing progressive labor-income taxation with taxation of capital. These principles could guide the rethinking of the social contract and fulfil European citizens' aspirations for growth and equity.

The Social Contract

The book first discusses the various ideas which comprise the theory of the social contract, and then traces the history as it developed. The central theme of the social contract, the relationship of citizens and government, is also analyzed.

From Generation to Generation

The republication of From Generation to Generation-almost half a century after its first appearance in 1956-constitutes a good occasion for a look at the way in which problems of youth and generations developed in contemporary societies. In this brilliant, pioneering effort, different approaches in the social sciences to the analysis of these issues receive close scrutiny. Eisenstadt reexamines these issues by including in this edition several new chapters on this theme.

The Social Contract in America

The first comprehensive examination of the social contract's role in American political development. Traces the history of the contract--the closest thing we have to a common philosophy--from its role in the Founding up to current day debates, and charts its rise--and demise--in influence over American political thought.

Philosophy, Politics and Society: Justice between age groups and generations

In the fifty years since Rawls seminal work A Theory of Justice, the concept has been debated with those on the political right and left advocating very different understandings. This unique global collection, written by a group of international experts, offers wide-ranging analyses of the meaning of social justice that challenge the ability of the market to provide social justice for all. The Handbook

also looks at how the theory of social justice informs practice within a range of occupations or welfare divisions.

Handbook on Global Social Justice

First published in 2004. Routledge is an imprint of Taylor & Francis, an informa company.

The Social Contract from Hobbes to Rawls

Building on the success of the 2003 Handbook of the Life Course, this second volume identifies future directions for life course research and policy. The introductory essay and the chapters that make up the five sections of this book, show consensus on strategic “next steps” in life course studies. These next steps are explored in detail in each section: Section I, on life course theory, provides fresh perspectives on well-established topics, including cohorts, life stages, and legal and regulatory contexts. It challenges life course scholars to move beyond common individualistic paradigms. Section II highlights changes in major institutional and organizational contexts of the life course. It draws on conceptual advances and recent empirical findings to identify promising avenues for research that illuminate the interplay between structure and agency. It examines trends in family, school, and workplace, as well as contexts that deserve heightened attention, including the military, the criminal justice system, and natural and man-made disaster. The remaining three sections consider advances and suggest strategic opportunities in the study of health and development throughout the life course. They explore methodological innovations, including qualitative and three-generational longitudinal research designs, causal analysis, growth curves, and the study of place. Finally, they show ways to build bridges between life course research and public policy.

Handbook of the Life Course

The question of communication and understanding between different generations is emerging as a key issue for the twenty-first century. The advent of ageing populations may lead to increased conflict or solidarity in society, and provokes a profound ambivalence both in public and in the private sphere. In a new approach, Biggs and Lowenstein offer a critical examination of Generational Intelligence as one way of addressing these issues. How easy is it to put yourself in the shoes of someone of a different age group? What are the personal, interpersonal and social factors that affect our perceptions of the ‘age other’? What are the key issues facing families, workplaces and communities in an ageing society? This book sets out a way of thinking about interpersonal relations based on age, and the question of communication between people of different ages and generations. The book challenges existing orthodoxies for relations between adults of different ages and draws out steps that can be taken to increase understanding between generational groups. The authors outline a series of steps that can be taken to enhance Generational Intelligence, examine existing theories and social issues, and suggest new directions for sustainable relations between generational groups.

Generational Intelligence

At the heart of representative government is the question: "What makes government and its agents legitimate authorities?" The notion of consent to a social contract between the citizen and his government is central to this problem. What are the functions of public authority? What are the people's rights in a self-governing and representative state? Patrick Riley presents a comprehensive historical analysis of the meaning of contract theory and a testing of the inherent validity of the ideas of consent and obligation. He uncovers the critical relationship between the act of willing and that of consenting in self-government and shows how "will" relates to political legitimacy. His is the first large-scale study of social contract theory from Hobbes to Rawls that gives "will" the central place it occupies in contractarian thinking.

The Social Contract Between the Generations

The New Sociology of Ageing explores the challenges and opportunities of ageing as a global force. Alongside globalisation, urbanisation, new technology, climate change, and global pandemics, ageing is transforming life in the twenty-first century. Through the eyes of a young sociology student and her multigenerational family, this book sets out a new sociological framework to interpret ageing societies. It explores how the ‘New Old’ – the baby boomer generation – might be mobilised as an agency of social change in transforming later life. It proposes this generation as the co-architects of

a new intergenerational social contract for the era ahead, rather than as the recipients of a post-war twentieth-century social contract that society can no longer support. Taking Britain as a case study and societies across the world as examples, Slattery explores emerging revolutions in work and retirement, potential crises in pensions, healthcare and housing, as well as transformations in family life and in our attitudes to sex and death in later life. This book provides a clear overview of the sociology of ageing. It introduces students to demography as a sociological force of the future, and to the perils and the promises of longevity as societies across the world approach the Hundred-Year Life. This book will be of interest to undergraduate students and early scholars in the social sciences, particularly in sociology, gerontology, social policy, and public health.

Will and Political Legitimacy

First published in 1987. This study is concerned with the problem of political obligation, the normative question of why one should obey the law, and with social contract thought as an answer to this question. It is entitled a critique, but the critique is not of social contract theory as such, but rather of the "orthodox" treatment of contract that yields so readily to the rough handling and easy rejection that is the normal lot of contractarianism in contemporary treatments. In its place will be suggested a reinterpretation of contract that sees it as making different assumptions and requiring different premises, and that is proof against many of the orthodox refutations of social contract theory; the reinterpretation is thus in the nature of a vindication. First, from an examination of the most commonly cited champions of contractarianism (namely Hobbes, Locke and Rousseau) will be derive a reinterpretation of contract in the form of a new model or syllogism, the features of which will be brought out by contrasting it first with the contemporary ideas of John Rawls and then with the orthodox model itself. Democratic consent theory, as the heir to the remnants of the orthodox model, will be examined, and the ideas of T. H. Green will be considered as embodying an important feature of contractarianism omitted or ignored by the orthodox model (and hence by democratic theory.) Finally, the new model of contract will be suggested as a potentially useful approach to the problem of political obligation in the modern context. This title will be of interest to student of politics and philosophy.

The New Sociology of Ageing

Russell Kirk, author of *The Conservative Mind* and *A Program for Conservatives*, has been regarded as one of the foremost figures of the post-World War II revival in conservative thought. While numerous commentators on contemporary political thought have acknowledged his considerable influence on the substance and direction of American conservatism, no analysis of his social and political writing has dealt extensively with the philosophical foundations of his work. In this provocative study, W. Wesley McDonald examines those foundations and demonstrates their impact on the conservative intellectual movement that emerged in the 1950s and 1960s. Kirk played a pivotal role in drawing conservatism away from the laissez-faire principles of libertarianism and toward those of a traditional community grounded in a renewed appreciation of man's social and spiritual nature and the moral prerequisites of genuine liberty. In a humane social order, a community of spirit is fostered in which generations are bound together. According to Kirk, this link is achieved through moral and social norms that transcend the particularities of time and place and, because they form the basis of genuine civilized existence, can only be neglected at great peril. These norms, reflected in religious dogmas, traditions, humane letters, social habit and custom, and prescriptive institutions, create the sources of the true community that is the final end of politics. Although this study does not challenge Kirk's debts to a predominantly Catholic and Anglo-Catholic tradition of natural law, its focus is on his appeal to historical experience as the test of sound institutions. This aspect of his thought was essential to Kirk's understanding of moral, cultural, and aesthetic norms and can be seen in his responses to American humanists Paul Elmer More and Irving Babbitt and to English and American romantic literature. Russell Kirk and the Age of Ideology is particularly relevant because of the growing interest in Kirk's legacy and the current debate over the meaning of conservatism. McDonald addresses both of those developments in the context of examining Kirk's thought, attempting to correct some of the inadequacies contained in earlier studies that assess Kirk as a political thinker. This book will serve as a significant contribution to the commentary on this fascinating figure.

Social Contract

This book explores the social and political implications of what the authors identify as the decline of the social contract in America and the rise of a citizenry that has become self-centered, entitled, and

independent. For nearly two decades, America has been in a “cultural war” over moral values and social issues, becoming a divided nation geographically, politically, socially, and morally. We are witnessing the decline of American Democracy, the authors argue, resulting from the erosion of the idea of the social contract. Especially since the “baby boomers,” each successive generation has emphasized personal license to the exclusion of service, social integration, and the common good. With the social contract, the larger general will becomes the means of establishing reciprocal rights and duties, privileges, and responsibilities as a basis of the state. The balkanization of America has changed the role of government from one of oversight to one of dependency, where individual freedom and responsibility are sacrificed for group equality. This book examines the conditions of this social fragmentation, and offers ideas of an American Renaissance predicated on communicative idealism.

Russell Kirk and the Age of Ideology

Although researchers have long been aware that the species-typical architecture of the human mind is the product of our evolutionary history, it has only been in the last three decades that advances in such fields as evolutionary biology, cognitive psychology, and paleoanthropology have made the fact of our evolution illuminating. Converging findings from a variety of disciplines are leading to the emergence of a fundamentally new view of the human mind, and with it a new framework for the behavioral and social sciences. First, with the advent of the cognitive revolution, human nature can finally be defined precisely as the set of universal, species-typical information-processing programs that operate beneath the surface of expressed cultural variability. Second, this collection of cognitive programs evolved in the Pleistocene to solve the adaptive problems regularly faced by our hunter-gatherer ancestors--problems such as mate selection, language acquisition, cooperation, and sexual infidelity. Consequently, the traditional view of the mind as a general-purpose computer, tabula rasa, or passive recipient of culture is being replaced by the view that the mind resembles an intricate network of functionally specialized computers, each of which imposes contentful structure on human mental organization and culture. The *Adapted Mind* explores this new approach--evolutionary psychology--and its implications for a new view of culture.

Social Fragmentation and the Decline of American Democracy

In recent years, major social forces such as: ageing populations, social trends, migration patterns, and the globalization of economies, have reshaped social welfare policies and practices across the globe. Multinational corporations, NGOs, and other international organizations have begun to influence social policy at a national and local level. Among the many ramifications of these changes is that globalizing

influences may hinder the ability of individual nation-states to effect policies that are beneficial to them on a local level. With contributions from thirteen countries worldwide, this collected work represents the first major comparative analysis on the effect of globalization on the international welfare state. The Welfare State in Post-Industrial Society is divided into two major sections: the first draws from a number of leading social welfare researchers from diverse countries who point to the nation-state as case studies; highlighting how it goes about establishing and revising social welfare provisions. The second portion of the volume then moves to a more global perspective in its analysis and questioning of the impact of globalization on citizenship, ageing and marketization. The Welfare State in Post-Industrial Society seeks to encourage debate about the implications of the most pressing social welfare issues in nation-states, and integrate analyses of policy and practice in particular countries struggling to provide social welfare support for their needy populations.

The Student's Companion to Social Policy

The book is without doubt a must-read reflection on the notion of full employment and a source of inspiration for the establishing of the knowledge-based economy that is such an aspiration for Europeans. Thomas Bauwens, Agence Europe Every book by Günther Schmid is an event. This one illuminates the current European policy debate on flexicurity . It gives fresh analyses of the comparative employment performances of the EU and the USA, and proposes a path-breaking framework for understanding and improving them. Pragmatic and provocative, Schmid s contribution should be a must for researchers, but also for HR managers, social partners representatives and policymakers interested in the present and future of work and employment. Bernard Gazier, University Paris 1 and a Member of the Institut Universitaire de France Transitional Labour Markets (TLM) defined as legitimate, negotiated and politically supported sets of various employment options in critical events over the life course are an essential ingredient of modern full employment strategies. After assessing the European Employment Strategy, this book offers a detailed comparative analysis of employment performance for selected European member states and the United States. It suggests that successful employment systems arise from a new paradigm of flexibility and security (flexicurity) the balance of which varies according to countries institutional paths. Whilst there is no best practice , TLM theory does provide normative and analytical principles that can be generalised for various institutional settings. The book also provides good practice examples for managing critical transitions over the life course from education to employment, from one job to another, from unemployment to employment, from private activities to gainful work and from employment to retirement and develops the contours for extending unemployment insurance to work life insurance. With a fresh and new approach to the question of full employment in modern society, this book will appeal to academic scholars interested in labour market and employment policies, and policy decision makers at local, regional, national and European levels.

Inspired by ancient Greek city states, Rousseau searched for a way which states of his day could be equally representative Holding men in wretched subservience, feudalism—alongside religion—was a powerful force in the eighteenth century. Self-serving monarchic social systems, which collectively reduced common people to servitude, were now attacked by Enlightenment philosophers, of whom Rousseau was a leading light. His masterpiece, The Social Contract, profoundly influenced the subsequent development of society and remains provocative in a modern age of continuing widespread vested interest. This is the most comprehensive paperback edition available, with introduction, notes, index and chronology of Rousseau's life and times.

Math Review ToolKit for General Chemistry

Excerpt from General Chemistry, Vol. 1: Principles and Applications This book has been written to meet the demand for a Simple and practical treatment of the principles and applications of Chemistry. The author realizes that demands are now being made of teachers of Chemistry which would hardly have been considered several years ago. Not only must the student be taught the principles of chemistry and their applications in daily life, but he must be taught in such a way that, Should occasion arise, he can use chemistry in earning a living. The plea SO long made that chemistry is practical and useful is now being tested. Consequently the author has kept one thought in mind during the preparation of this book, viz.: principles and applications must go hand in hand. Principles are the foundation upon which applications rest. To teach either one exclusively is hazardous, for when separated one is as barren as the other is superficial. The author has aimed to include in this book not only the principles of Chemistry universally regarded as an essential part of a well-rounded course, but also numerous practical applications. First, the text includes a clear, Simple treatment of the facts, laws, theories, and principles that serve as the foundation of chemistry. This material is written in a style which assumes that the book is to be read, studied, and used by beginners. Special efiort has been made to present very clearly such needful topics as atomic weights, equations, and valence. All of this material is made more serviceable by a liberal selection of original exercises and problems containing many novel and attractive features. Teachers will find in these exercises and problems abundant material to drive home principles and arouse interest in the vocational aspects of chemistry.
