

Water Rock Amp Time The Geologic Story Of Zion National Park

[#zion national park geology](#) [#water erosion zion](#) [#rock formations zion](#) [#geologic history zion](#) [#time scale geology](#)

Explore the incredible geologic story of Zion National Park, meticulously carved over eons by the relentless forces of water, the enduring nature of rock, and the immense span of time. This journey reveals how these elements sculpted Zion's iconic canyons, towering cliffs, and unique landscapes, offering a profound glimpse into Earth's dynamic past.

Each paper contributes unique insights to the field it represents.

Intro

What is Geology? Geology is the science that deals with the earth's its history, and the processes that act on it. Historical Geology Economic Geology

Depositional Environments Canyonlands rock layers cover millions of years of time and represent many changing environments Depositional environment-a specific type of place in which sediments are deposited such as oceans, lakes, streams, or deserts This environments are represented through the stratas making up the canyons

Layers of Canyonlands - To the right is a stratigraphic map of the southeastern corner of Moab Canyonlands is made up of layers as old as the Paradox Formation to the youngest rocks being Navajo Sandstones.

Paradox Formation (-300 mya) up of evaporites, or salts, anhydrites, and helite. This was done through a series of ocean regression and transgression Acts as a base for everything in the area and is the reason for most of the unique features of Moab region through salt tectonics (arches, needles, grabens) Moves like liquid under pressure and weight

White Rim Sandstone - Organ Rock Shale Cedar Mesa Sandstone (Needles) - Halgaitio Formation Cedar Mesa Sandstone This sandstone is made up of near-shore sand dunes intermingling with periodic floods that brought dark red sediments from the ancient Uncompahgre Mountains Layer that makes up the "needles" of The Needles district of Canyonlands Needles formed through jointing in rocks and erosion cutting through those joints

White Rim Sandstone Sandstone deposited through wind-blown beach sands to create "clean" white sandy beaches Localized to Island in the Sky Much more resistant to weathering than layers on either side of it Creates many secondary canyons within Canyonlands

Wingate Sandstone (200 mya) Wind blown sand dunes deposited in the Jurassic Weathering and erosion resistant Creates the large cliffs we see in Island in the Sky and the surrounding Monbarea Navajo Sandstones (180 mya) One of the largest examples of wind-blown sand dunes in the rock record . Youngest rock layer in Canyonlands Famous for cross bedding . While the layer isn't super thick here in Canyonlands, moving west towards Zion the rock layers can become thousands of feet thick

Uplift We are not exactly sure when it comes to how the uplift of the Colorado Plateau happened Was caused during the Laramide Orogeny (Rocky Mountains) Shallow subduction of the Kula and Parallon plate underneath the North American plate

Big Bend Geology: The Primeval Puzzle - Big Bend Geology: The Primeval Puzzle by Texas Parks and Wildlife 53,107 views 10 years ago 8 minutes, 54 seconds - The Primeval Puzzle Geologists estimate that the earth is at least 4.5 billion years old. Surprise announcement from Hailey! Geology of National Parks is about to begin

Arches National Park is 120 square miles.

Physical weathering is a change that affects the structure of the rock but not the composition.

Chemical weathering alters the chemicals that compose the rocks.

Tell us where you are from and if you've ever visited Canyonland or the Arches!
